MYERS TANK PUMPS

EASIEST TO OPERATE

The Patented Cog Gear Head, as used on Myers Tank Pumps saves one-third of the operating power.

The valves are each located under a removable, individual cap, where they can be easily reached.

The purchaser buys the most service when he buys a Myers Tank Pump. Write for booklet.

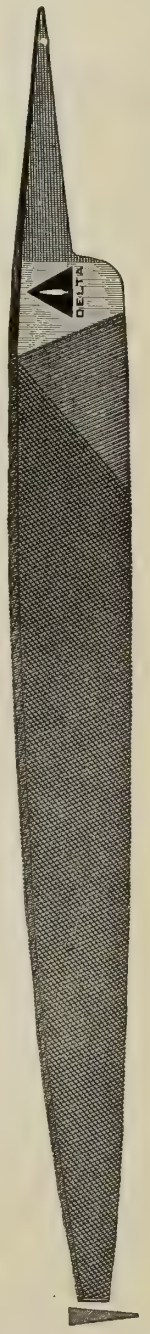
One Inch Space
$1.05 Per Issue
on Yearly Order.

We mean it

We'll send a specimen file gratis to you if you will arrange to have it tested in some foundry or machine shop where files are in daily use.

We want to have a competent workman try out the

Delta File



and report on it to his chief. For we **know** that the report will be favorable, and that we can get the file business of this firm.

Then the order will be placed through you as our agent, and for years to come you'll have a dependable service of pleasant income.

Delta Files will out-cut and outlast any other file made. We've had 50 years' evidence of this—and endless victories.

A file for every purpose Delta files are the only line of files from 3 to 24 inches long made absolutely of Crucible Steel.

Will you work with us to get local business?

A Straight Talk from the Manager

No. 49

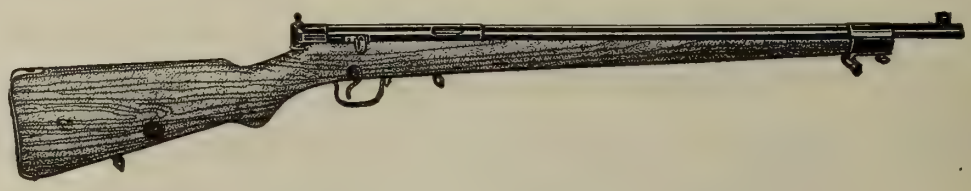
Make It Pay!

ONE of the best known hardwaremen in Eastern Ontario (you would know him well if I mentioned his name) made a strong point in favor of reading Hardware and Metal advertisements, in conversation with a representative the other day.

"In my paint department alone," he said, "I find that it pays me well to read the advertisements."

"The line of paint I handle is advertised regularly in Hardware and Metal, and I find that I am constantly getting points from these advertisements which help me to make more paint sales."

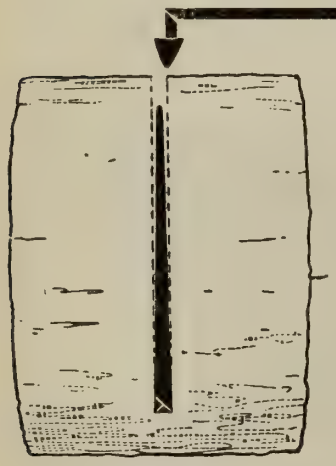
Try out this idea if you are not already doing so, and see what big dividends your investment in subscription to Hardware and Metal will yield you. Just take up your pencil and figure how many gallons of paint you would have to sell to make your subscription pay.



And this is not taking into consideration the dozens of other lines advertised.

J. G. L.

Do You Cash-in on the Demand for Target Rifles?



Many people are anxious to learn how to shoot and are looking for a suitable and moderately priced target rifle. Why not profit from this movement by displaying a good stock of Ross Rifles?

The Ross .22 Cadet Rifle is built to withstand rough usage, its action is so simple as to be practically fool proof, and it possesses remarkable accuracy. Its general excellence is vouched for by the Canadian Government, who have adopted it for use by all Canadian Cadet Corps. Retails at $12.00.

For catalogues, discounts, etc., address

That Good "Richards-Wilcox" Trolley Track

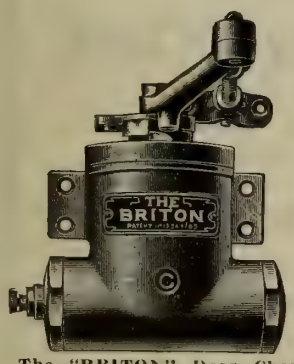
PICK up a length of it and look it over carefully. Run your eye down one side and then down the other side, and see how straight it is.

Look through it and see how straight the runway is. See if there's any twist or bend or warp in it.

It is the only track on the market in which the wheels cannot scrape the side of the box, or the pendant scrape the flange.

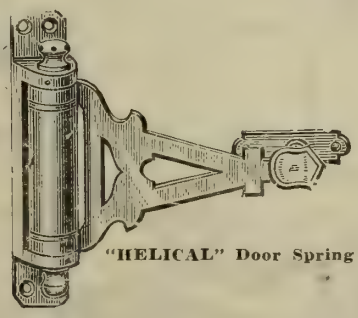
There are cheaper hangers than "R-W" —there are none so good.

When a farmer buys a trolley hanger, he thinks he is buying the best. Sell him THE BEST rather than the second best.



Now put a Champion 321 Hanger in it. Observe that the only point of contact is right on the tread, where the machined wheel runs on a flat surface, eliminating all friction.

Richards-Wilcox



CANADIAN COMPANY, LTD.

With a Given Amount of the Same Ingredients

one woman will turn out a loaf of bread that is sweet, light and wholesome—a pleasure to behold and a delight to find before you on the table.

Another with fully equal opportunity will produce a loaf that is best passed by with a brief look and a few kind words.

Neither woman can be always sure of just the same results as so many elements enter into the successful accomplishment of this difficult task.

UNIVERSAL Bread Makers

are designed to remove this element of risk for both the good cook and those who are not so good.

The excellence of the bread is either made or marred in the mixing.

Proper mixing may be effected, every time the same and much more efficiently than by hand, by means of the Universal Bread Maker.

Real home made bread far better than any which may be bought can in this way be made quickly, cleanly and to the satisfaction of all concerned.

If we have told you something new
Then tell your customer also.

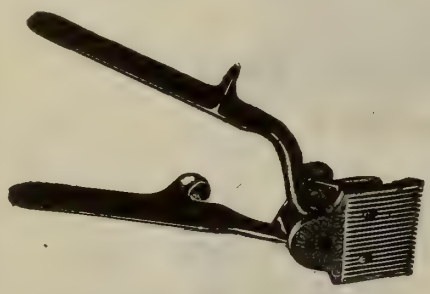
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25.

SPEED
Best low-priced Clipper made. Retailing at about $1.00.

IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Better Retailing Means A Better Business

Every month "The Millers Falls Star" is crowded full of valuable suggestions on better retailing. Every month it gives you many new ideas on modern hardware merchandising and shows you ways to improve your methods and strengthen your organization.

Just now we are running a series of articles on sales training that outlines in detail a method of grading up your sales force that will run up the sales total on your cash register and the net profit on your books.

Are you reading the good things in the "Star" and putting them to work? Are you taking full advantage of the merchandising service we are offering you?

Don't let the fact that you are buying Millers Falls Tools through a jobber prevent you from writing us at once and getting our Service. There are several thousand more dealers who ought to be on our mailing list. If you aren't there, write us to-day.

Sell Standard Tools

Here's the mitre box that is known the country over as the standard tool for doing fine and accurate work. Quick-acting—unusual capacity range—rigid construction that will last for years.

If you only have a small tool stock, you need to carry the Standard tool.

The KIR-BEN Kir-Ben Cast Range

In a cast Range we provide a variety of styles and finishes—plain, ebony, standard, nickeled; and with right and left hand reservoirs. They are convertible for either coal or wood.

In them all the essential Kir-Ben ideals are fully realized—

FUEL ECONOMY
BAKING ABILITY
DURABILITY

Some of the notable details of Kir-Ben Cast Ranges are:

Grates and Linings—Either brick or iron linings for coal and duplex, dockash or flat grates as customer may desire. For regular wood burning a complete set of wood linings with sliding bottom-grate can be supplied.

Fire Box—Large and roomy, will take wood 27 inches long.

Oven—Heated by improved flue on five sides. Movable oven rack. Pedal door opener.

Damper—Only one to regulate. Shows at a glance whether opened or closed.

Broiler Door and Pouch Feed.—Large and opens down out of the way. Convenient for adding feul when heavy utensils are in use.

Reservoir—Very large capacity and quick heating.

Ash Pan—Large and snug fitting.

Clean Out Door—On front under oven door—easiest place to get at.

This is only a partial summary of distinctive and meritorious features of a **Kir-Ben Cast Range.**

Our catalogue gives the whole story.

You should be a Kir-Ben Agent
—for your own sake and to give your customers the perfect range.

Kir-Ben Ranges, Stoves and furnaces are **Masters.**

The very name, **Kir-Ben** is a passport to attention and favor.

Write us about representation—Our terms, proposals, etc.

It is worth while.

Sell LONDON "Washers" *to* Servantless Homes

WASH women are few and far between in many Canadian cities and towns; and they are demanding big pay for a few hours of service. This condition has made many women do their own washing; and so has opened up a fine chance for you to sell washing machines.

Sell the "London"—for its good service. Five models:

No. 1—Hand Power.
No. 2—Water Motor Power.
No. 3—Electric Motor Power.
No. 4—Family Power Washer.
No. 5—Improved Hand Power.

You cannot appreciate the "London" until you read about it in our catalogue. So send for catalogue. Use it to canvass customers and sell washing machines that really wash.

The London Foundry Co., Ltd.
LONDON, ONT.

If interested, tear out this page and keep with letters to be answered.

Do not confuse our U.S. POULTRY FENCE with the Hexagon Poultry Netting

It is built on miniature scale of farm fence, interwoven with parallel wires and hinge joints, so that it stretches to the posts straight, even and nice without buckling, bagging or sagging.

It's so stiff and satisfactory that it does not require top rail and base board or so many posts as the old style netting.

Guaranteed 5 or 6 times as strong and at least 100 per cent. better in every way. All parallel wires are of even length and all meshes of uniform size. They can't be otherwise the way it's made.

Made in heights from 12 to 72 inches. Galvanized before weaving. Put up in 150 foot rolls and sold by the square foot.

It's not merely a substitute for the old style netting. It's something much better and more economical to the consumer and sells on sight. It is handled only by the legitimate trade—*the dealers*—not a departmental store or mail order proposition. It's the strongest, cheapest, most sightly and best fence for the purpose yet invented.

It's a great leader, trade-builder and customer-satisfier. Do not purchase poultry netting or fencing until you have seen our N.S. Poultry Fencing, it will be a surprise and revelation to you and your trade.

This fence has stood the test and has proven **its superiority during the last three years fulfilling all the promises we had made for it as to quality and economy.**

The very act of unrolling U.S. Poultry Fence is a surprise, as it rolls out flat and even like a roll of carpet or building paper. Set it up on edge and again to observer's surprise it stands up straight, stiff and true. The parallel wires and hinge joints are responsible for this perfect condition.

Made of No. 19 wire only.

Order from the sole distributors and thereby make certain of getting the genuine article.

We have a complete stock and recommend you to order for early shipment to guard against possible shortage later on.

The MacLean Business and Class Publications in Canada

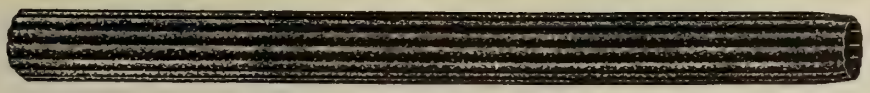
TO SELL or buy from Canada such lines as machinery, hardware, food products, dry goods, books and stationery, paper, printing machinery and supplies and general merchandise of almost every description, raw or manufactured, use or consult the MacLean Business and Class Publications, as per list below. For special information, write the publishers. Concerning the quality of the MacLean publications, let this copy of HARDWARE AND METAL which you hold in your hands speak for all. The MacLean list of 14 publications is as follows:—

THE CANADIAN GROCER (Est. 1886)
HARDWARE AND METAL (Est. 1889)
DRY GOODS REVIEW (Est. 1889)
MEN'S WEAR REVIEW (Est. 1898)
CANADIAN MACHINERY (Est. 1905)
THE POWER HOUSE (Est. 1907)
BOOKSELLER AND STATIONER (Est. 1884)
THE SANITARY ENGINEER (Est. 1907)
MARINE ENGINEERING OF CANADA (Est. 1910)
CANADIAN FOUNDRYMAN (Est. 1909)
PRINTER AND PUBLISHER (Est. 1892)
THE FINANCIAL POST (Est. 1907)
MACLEAN'S MAGAZINE (Est. 1896)
THE FARMER'S MAGAZINE (Est. 1910)

This fact may interest you: namely, the MacLean organization is the largest concern of its kind in the British Empire. The output of its mechanical department every working day is the equivalent of a 112-page publication of the size and type of this copy of HARDWARE AND METAL.

Our London Office, 88 Fleet Street, E.C.

Also at: NEW YORK, BOSTON, CHICAGO, MONTREAL, WINNIPEG



For over 20 years the MacLean Publishing Company has maintained a fully-staffed London office, and has rendered British and Continental manufacturers, shippers, and traders an invaluable service in many directions.

Our London managing director, Mr. E. J. Dodd, has just returned to London after an extended visit to Canada, during which time he investigated very closely the trade conditions and opportunities of both Eastern and Western Canada. Mr. Dodd will welcome correspondence from all who may wish fresh, full and well-informed knowledge concerning trade prospects, connections and introductions as these relate to Canada.

Specimen copies of the MacLean publications will be cheerfully forwarded to all asking for them. Address us at London or Toronto.

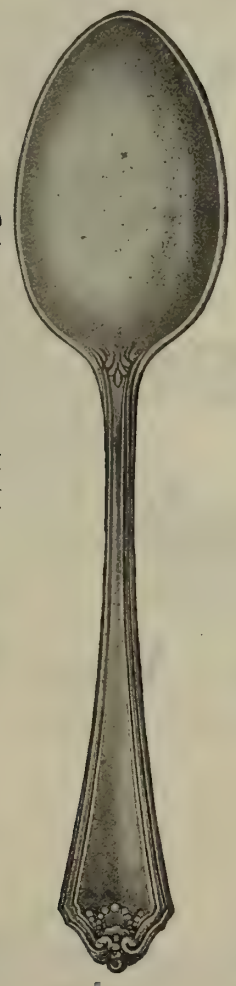
New Profits for Dealers Everywhere



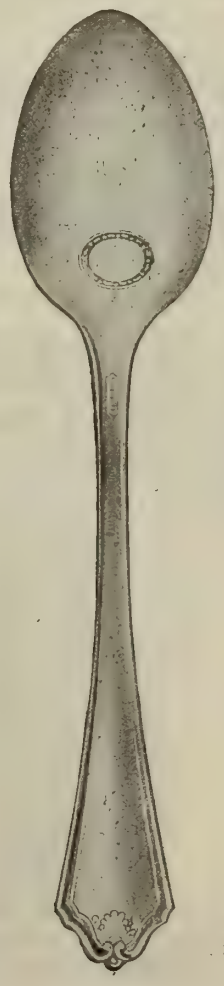
Service like Sterling—
—Plated Ware Price

Here is something unique in tableware—a much-needed response to the demands of both trade and public. Investigate this new line—it offers the life and looks of Sterling Silver and yet costs no more than Plated Ware.

Look at the sterling character of the pleasing design.

Note on the back of all spoons and forks the Sterling Silver mound at the point where ordinary plated ware first shows signs of service.

Remember, too, that long life is also assured by the heavy deposit of silver on an 18 per cent. nickel base.



FRONT
Note Sterling character imparted by combination of Colonial and Bead design.

The PATRICIA

WITH THE SILVER MOUND

This, our latest production, is an answer to the trade. Everywhere they have asked for a reasonably-priced ware. Here, in the Patricia line, you have a really saleable, really serviceable ware, to sell at a moderate price. Moreover, there is in these moderate prices a discount that should interest you.

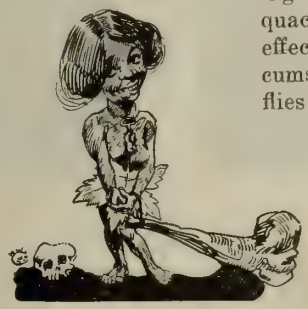
The Enemy Goods Exhibit



THE purpose behind the exhibition of enemy goods, now being shown in large Canadian industrial centres, was unquestionably a good one. But after paying a visit to the exhibit one cannot conscientiously refuse to voice some criticisms and suggestions. That it has been of assistance to Canadian business men, intent on improving their grasp of trade, is apparent, but it has not been fully effective.

The method of collecting the material was such that the goods displayed necessarily were somewhat shopworn. The visitor expected to see articles that had passed through the regular channels of trade and that showed all the signs of it. Nevertheless the general tawdriness of the display came as a distinct shock. "Tawdry" is the only word that describes the goods as a whole. Germany has dumped on the markets of the world a lot of cheap goods, it is true, but Made-in-Germany has been stamped also on a wide variety of the very finest goods sold; and that the exhibit should consist very largely of the dregs of German manufacture lessened its practical value.

The goods had been collected by British consuls from the four corners of the earth. One saw clothing from Trinidad, hats from the Straits Settlement and padlocks from Mombassa. The supplies from Mombassa, by the way, were a distinct feature. That Mombassa consul, apparently an energetic chap, had combed the Mombassan stores and had sent through specimens of everything. One searched in vain for the German skates that once were sold in Canada but as a solace found combs that Deutschland provided for the dusky belles of Mombassa. The display of German toys might be meagre but what of that? Were there not cow bells and loin cloths from Mombassa?

The mention of skates and toys lays emphasis on two of the weakest features of the exhibit. German skates have been sold in huge volume in Canada but the representative of HARDWARE AND METAL failed to find any on display. The German toy industry was wonderful in its scope and ingenuity but the toys included in the exhibit looked like the relics of a rather neglected Orphan's Asylum. Another weak feature was the collection of lithographs. In Germany lithography and printing have been developed to a very high degree of perfection; in fact, some of the latest improvements and inventions in the art of reproduction have come from the land of the Kaiser. But the prints on exhibition were without exception "chromos." German lithographers may still turn out these prints. They may still sell them—in Mombassa, of course—but there is little information in this for the British and Canadian manufacturer. What we want to replace is the best of German industry. Why were there not specimens on hand of rotogravure printing and the better specimens of German poster art?

It is perhaps unfair to suggest that the consuls went out into the highways and by-ways of trade and were accommodatingly sold goods of German origin that had stuck on the shelves of the storekeepers for years. But the idea carried away by the visitor was that most of the goods were of the cheaper variety of German manufacture and that a large share of them had been on store shelves for long periods.

It goes without saying that the exhibit had many interesting points for the manufacturer. "I had no idea that such goods were sold in such and such a place," was a remark frequently heard. Manufacturers might not want to duplicate some of the goods shown, but they gained ideas as to where certain lines could be sold. Full credit must be given to the men who planned the exhibition on that score. Furthermore, it demonstrated that Germany has done a huge business by turning out the kind of goods that the people of foreign countries want, instead of endeavoring to develop a demand for the goods that sell best in more civilized countries. The tawdriness of so much of the material shown conveyed this lesson. British industry has been too rigid on that point perhaps and, even if Germany's adaptability to foreign demand has resulted in the production of goods that are of poor quality, it has brought big trade to the land of the Kaiser.

An exhibit of this nature should also show, however, those articles of German manufacture that command a ready sale on the best markets of the world, the goods that have sold here in Canada, the goods that we must compete against. Such an exhibit would be of inestimable value to Canadian business men.

The exhibit, as it stands, gives a very inadequate idea of German industry. It almost suggests that the German manufacturer is the rag-peddler and the junk dealer of the world of industry when in reality he has been the most formidable competitor that John Bull has faced.

It is gratifying to learn that the directors are already arranging a fresh exhibit which will contain a better assortment and which in due course will also be brought out to Canada. It is promised that this show will be along more thorough lines and the directors are deserving of credit therefor, for having seen the inadequacy of their present effort and taken steps to effect an improvement. Perhaps under the circumstances this stricture is too severe—but, time flies and if a word of criticism will hasten the preparation of the new exhibit the above frank, though kindly-meant expression of opinion is justified. War is a time of outspoken thought. It is better to point out the faults in this laudable enterprise than to stifle the possibility of real results by perfunctory praise.

Meeting the Customer at the Door

A Hardware Man's Rule of Success—Friendliness as a Business Asset—The Evolution of the Small Town Hardware Store—An Example of What Can be Done.

"I meet my customers at the door." That is the way E. E. Johnson of Lansdown states a simple fact, that has in no small measure contributed to his success.

It is more than a mere statement of fact. It is an outline of a policy, one of friendliness, courtesy and competent service, that has been the backbone of the business, from the days when the little store on the hill was opened till the summer when Mr. Johnston moved into his new store.

The Hardware Store in the Small Town

Lansdown is only a small town that can number its inhabitants in hundreds, and not so many hundreds at that. In such towns Lansdown is generally found sandwiched in somewhere between the cheese and the calico in the general emporium. It is usually shy on the exact size of the nails one's heart hankers for, and hinges for the garden gate have often to be foregone. The hardware department of a country store often lays the emphasis on patience. This is not a condemnation. It met a certain demand, but could not in the nature of things meet all the demand. when its slender resources were unequal to the emergency the anxious buyer must needs wait for the first visit to a larger town.

Mr. Johnson, saw the need and believed that there was enough business to be done in even a small town, in one single line, to make it an assured success.

It was an experiement, but one that has amply proved itself. There are now

E. E. Johnson,

two distinct hardware stores in Lansdown, both doing a first class business, neither of their owners having to spend sleepless nights devising means to corall the other man's trade.

It has been demonstrated that the country hardware store is a possibility and Mr. Johnson is at present busily engaged in demonstrating the fact, that a small town store may be just as well equipped, just as well stocked and just as attractive generally as any city store.

No Formula for Success

There is no stated formula for success according to Mr. Johnson, other than hard and persistent work. "I don't leave the store much," he said, "I'm usually here, my customers are mostly farmers and I try always to be at the door when they stop."

When you come to the last analysis, in Mr. Johnson's opinion, its always the goods that make the business. He carries a full line in everything, complete to the last volt. "It's first class stock," he says, "bought at right figures." And I always try to tell a customer just what he is buying. Once is enough to sell any article. If they come again, I want them to come to buy something else, not to return in exchange something they have already bought."

When asked why he had moved into a new store when he was doing so well in the old, Mr. Johnson replied that if a man was going to continue in business throughout life, the greatest amount of his pleasure must be derived from it, and nice surroundings give an added zest to the work. "Why if I had to go back to my old place now," he said, "I believe I'd have to quit."

And if a man can take pride in his surroundings, so can a community. This has been proved by Mr. Johnson's experience. He has only been six weeks located in his new stand and is as yet hardly settled, but already, there has been a very considerable increase in business.

A view of the paint department.

A view of the hardware and tools section.

A Farmer's Store

The store is open every night, because it is first and foremost a farmers' store, and the farmer is a man whose days are full from dawn to dusk. But the farmer has an automobile now and once the cows are tucked away, leisure and a car just naturally lead him to the town. Therefore the closed night scheme would be a mistake, in Mr. Johnson's opinion.

Accessory Department

The fact that so many of the customers have cars has led Mr. Johnson to instal a very complete tire and automobile accessory department that has proved very successful. In fact there is very little that ever distantly approaches hardware that Mr. Johnson does not stock from salt to cement, big selling lines to fences and general hardware. He is also at present arranging a very attractive silverware and agateware department.

A Modern Store

The store of which Mr. Johnson is so justly proud is 40 ft. square with open faced and low cases in polished oak covering most of the wall space, and lending the whole store an unusually rich and attractive appearance.

Facing you as you enter, lighted by windows on three sides, is the tool and smallware department. It covers the whole wall right to the roof and is supplied with glass fronted drawers with a red plush face for displaying the sample. These drawers are shaped especially for the article they display, which breaks what might be a monotonous regularity. A large glass fronted compartment is for saws, axes and other larger tools. The drawers are reached by a ladder that faces sideways instead of leaning conventionally against the cases. Thus the salesman can reach the drawer from the side.

The hardware store of E. E. Johnson, at Lansdowne, Ont.—A modern store in a small town—Note the doorway at the rear, opening on the receiving room for incoming goods.

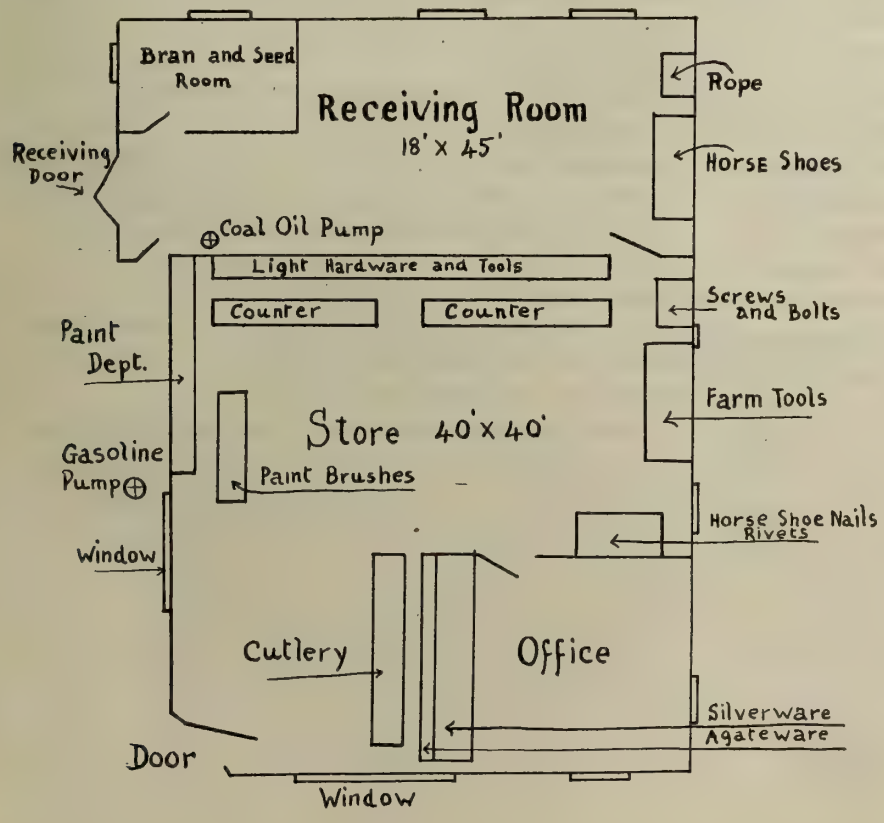
Under the main counter are bins for nails each capable of holding two kegs, a convenient and sightly arrangement, as the decorative volume of nails is limited.

Attractive Paint Display

To the left of this main counter is the paint department, arranged in adjustable oak shelving. In this way the stock need never appear depleted or over crowded, a simple change of the shelving almost doubling the capacity. In front of this is a show case for paint brushes of all varieties.

Facing the side window with its back to one wall of the office is another large display case. Its lower half, two feet in depth, and faced with grained oak is used for agate ware, while the narrow shelves reaching to the roof are for the silverware department. Handsome glass show case counters in front of these are used for displaying cutlery and similar goods.

Hanging Up the Shovel and the Hoe



To the right of the store proper—are the farm tools. Framed in a large oak cabinet hung on double hooks in orderly array, they make a surprisingly attractive display. One realizes that the decorative value of the humble spade has been given full credit and that "Old Black Joe" said something when he suggested "hanging up the shovel and the hoe."

On either side of the case are two cabinets looking for all the world like a glorified card index system. Well, they are something of the kind. They index every screw and rivet and horse shoe nail and bolt to the fraction of an inch. For Mr. Johnson believes not only in service, but in prompt service, and he says many a man will drop in because he knows you can given him exactly what he wants, without a delay, where a slower service might lose his custom entirely.

Behind the Screws

So much for the store itself. The completeness does not stay there. Behind the store proper is the receiving room where the rough work of the business is done. Here everything is received.

(Continued on page 39.)

A plan of the ground floor of the store of E. E. Johnson, of Lansdown.

HARDWARE & METAL
CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, NOVEMBER 11, 1916 No. 45

TIME TO think of the Christmas trade.

* * *

REMEMBER that Christmas is getting closer all the time.

* * *

PAPER continues to advance. Printed matter will soon be getting into the luxury class.

* * *

THE BUSINESS outlook is most promising. The hardwareman should be able to get his share.

* * *

IT SEEMS fairly certain now that the war will last for another year and war contracts are being renewed.

* * *

THE PUBLISHER has bad dreams nowadays, dreams in which the goblins of Higher Paper Costs play a prominent part.

* * *

AT TIME of writing it is doubtful who has been elected president of the U.S., but it begins to look like a triumph for the razor.

* * *

THE WILSON sweep of the West was rather surprising in view of the fact that Watchful Waiting has been the keynote of his policy. The motto of the west has always been "Get Out and Hustle."

THE ENEMY GOODS EXHIBIT.

MANY manufacturers who visited the exhibition of enemy goods were disappointed. It did not show the goods that they were chiefly interested in—the lines that they might want to compete against. The exhibit was made up very largely also of the cheaper grades of German goods.

That it has done a large amount of good is incontestable, as it has conveyed to business men ideas with reference to the classes of goods that are sold the world over. HARDWARE AND METAL contends, however, that an exhibit, arranged by officials of the Imperial Government and sponsored by the Department of Trade and Commerce, should have been more thorough and complete. There are, for instance, scores of articles of German manufacture formerly handled by the hardware trade that were not shown. That the inadequacy of the exhibit is realized is evidenced by the steps now being taken to get another together which will be more complete. As plans for industrial and trade campaigns after the war are now being laid, this supplementary exhibition, if it is to do any good, must be ready for the public soon.

It is desired to point out that better results could be obtained if the co-operation of business men were secured in getting the goods together. The advice of manufacturers and retailers would be invaluable in placing the new exhibit on thoroughly practical basis.

THE WHOLESALE TRADE FAIR

ELSEWHERE in this issue is an article which gives an outline of the Leipzig Wholesale Trade Fair which is described as the pivotal point of German industry. The British Industries Fair and the Lyons Fair are Allied imitations of it. Another is planned for in Utrecht in Holland in 1917.

The movement for the establishment of such fairs is said to be sweeping the Allied nations of Europe. Undoubtedly that movement will be reflected here. The extent and manner of this development is unknown at present and this fact renders doubly necessary the viewing of it from every angle at present in order that we may intelligently prepare for the future.

Several plans suggest themselves in this connection. The most obvious one is that the Canadian Manufacturers' Association which so well represented this country at the Lyons Fair might act in conjunction with the British Industries' Fair Association to secure and maintain a permanent representation of Canadian manufactures in that exhibit. Or again a Canadian Fair might be feasible, although there are undoubtedly many arguments to be advanced against the latter plan in view of the present undeveloped scale of our manufacturing industries.

On the occasion of the recent fair in London the promoters were unfortunately so hampered by a lack of space that they had to restrict the exhibit to four principal trades, which resulted in hundreds of valuable exhibits being turned away. It is hoped that by next year this difficulty will have been overcome. The participation of the overseas Dominions in the London Fair would undoubtedly contribute to making that a gigantic exhibition.

The vital importance of these fairs cannot be too strongly emphasized as a factor in creating a prosperous condition of trade. They furnish a degree of permanence to it offered by no other agency. Orders are booked a year ahead. Goods are standardized, production costs lessened. In short, the manufacturer can plow ahead. It is further pointed out that as a stimulus to the creative faculty of the nation these fairs are unsurpassed. The development of the idea in Canada appears to be a necessary corollary of any plan of trade expansion.

Advertising with Warmth In It

The Advertising of Ashdown's, of Winnipeg—The Luke-Warm (or Colder) Advertising of a Nova Scotian—Teaching the Public to Become Larger Buyers—A Little Sermon on Success

By John C. Kirkwood.

IT does one's heart good to see the fine advertising being done in Winnipeg by Ashdown's. It would seem, from examples of their advertising which have come to my desk, that they make almost daily announcements. Also they use spaces of good size, and many illustrations; and their advertising man takes pains to "layout" or "display" his advertisements, and to provide the right sort of "copy" or reading matter in connection with each special article featured.

Two of these Ashdown advertisements which have come to us are herewith reproduced in order that readers of HARDWARE AND METAL may see the style of their advertisements, and perceive both their attractive and their selling power.

One thing is self evident; it is that these Ashdown advertisements are real shopping news to Winnipeg public; and one can conclude confidently that they are gratifying resultful.

Ashdown's seem to hold two beliefs very strongly. One is that they have many lines in which they believe the public ought to be interested; the other is that they believe that the public can be made and are genuinely interested in what hardware dealers provide. It is on these two points that I wish to build this little talk.

The Hardware Man's Belief

It goes without saying that the hardware dealer and his sales staff are deeply interested in their own merchandise. Otherwise they would probably be in some other line of business. They have been attracted to the hardware business because of their intense interest in the class of goods a hardware man deals in; and really, there are few businesses possessing greater appeal to men of action and of masculine fibre than the hardware business. The very name "hardware"—hard ware, wares made of metal principally—is masculine in its essence.

Also there is a certain element of the mechanical in the hardware business. tools, machines of sorts, machinery accessories, building supplies and all such merchandise are vastly interesting to the average man. So it is easy to understand the intensity of interest that those in the hardware trade have in their business; and how this particular class of business interests new customers—farmers and others. I remember that when I was in the retail grocery business, I saw and served more women folks than men folk; and I used to envy the hardware dealers in my town, for I knew that they got the men's trade; and the men carry the purse.

Now if the hardware trade is intensely appealing to those engaged in it, it can be safely assumed that what the hardware dealer sells is likely to be equally interesting to the general public. But it remains for the dealer to discover and develop this interest, and to turn it to profitable account.

This means, if it means anything, that the hardware dealer must be active in interpreting and revealing his business to others—this if he is to sell all the merchandise his community can absorb. He can be very sure that what he has to say will be read with responsive interest by his public if only he will say what he has to say interestingly—with some warmth and color in his advertisements.

Many retailers, when they sit down to write an advertisement, seem to freeze up in their brain and fingers, and what they write is frigid and pale. Now nobody wants to buy from a lifeless frosty mannered man, whether he be proprietor or employee, we all like to be served by eager, interested attentive salesman; and we all like to read the advertising in which there is blood-heat at least, and that has the red color of animation in it.

An Advertisement in which the chilliness of the refrigerators drives out the warm of the oil stoves—an advertisement prepared without earnestness and with little or no belief in the public's responsiveness. He who expects little is rarely disappointed.

I am reproducing an advertisement which appeared in a Nova Scotia weekly, to indicate a rather lifeless sort of advertisement—an advertisement of the dashed-off kind. If one wished to be facetious, there is material in this particular advertisement for his wit. Oil stoves and refrigerators—one to make things warm, or hot, the other to make things icy cold! In the writing of this advertisement the refrigerator seems to have numbed the blood of the writer.

This particular advertisement, by the bareness of interesting detail, by its apparent disbelief in the responsive interest of the public, is in marked contrast with the Ashdown type of advertisement.

Frost-bitten and timid men should not really be in the retail business, for the public wants to be served by retailers and retailers' salesmen who have zip and zest in their make-up and manner; and any man whose blood flows warmly and whose spirit rises keenly to the call of selling can write an advertisement that will glow with ardor and communicate responsiveness in the reader. It may be just a common 5-cent mouse-trap that is to be advertised. The arctic dealer will say—"the Sure Catch Mouse Trap—5 cents." This dealer with something torrid in his make-up will say:—

> "How much does a mouse trap cost? It costs the amount of the destruction it commits. And if you have a family of mice in your home, they may cost you many, many dollars. Catch them! and do it with a Sure Catch Mouse Trap which you can buy for the smallest of silver coins—a 5-cent piece.

No need to get tumultuous over a 5-cent article, yet you can put just a little vim into what you may have to say about it.

I know this: that if I am a bridegroom, about to set up house-keeping, and go into a hardware store, with two or three hundred dollars to give the dealer, if he can get them out of me, he will warm up to his work like a prize fighter, and will tell me earnestly and helpfully about everything he wants me to buy or that I may say I want to buy. He'll tell me why I should buy the highest priced stove he carries in stock, about the advantages of the dustless ash-sifter, about the virtues of

aluminum kitchenware, about his best cutlery and silverware, and so on. I'll get him on fire, and he'll get me on fire,

Now what a man can say with his lips he can say with a lead pencil and a piece of paper; and if you want to write advertisements that have some sparkle in them, some earnestness and selling power write out what you would have to say to a hard buyer, or to a customer who will buy if only you can make the article desirable in his or her eyes.

To sum it all up: show your own belief in your goods, when you prepare an advertisement, and show this belief in copy that has some warmth of expression, some eagerness of purpose about it. Address the advertisement, in imagination, to your wife, or to the woman you would like to have as wife; and I promise you, you'll write very good advertisements.

The Public Interest

Get this, also into your understanding; the public of your community want to know about what you have for them; and why they should have what you have bought to sell them. Also this: if you are mute about your goods, the public will buy from you only what they are in immediate need of; and they will delay buying as long as possible. So if you keep coldly aloof from your customers and should-be customers, and if they postpone their shopping at your store as long as they possibly can, you are going to do only a fraction of the business that you can do, keep this in remembrance: the public buys very, very much that it does not need, just because some clever salesman or merchant made it desirous of possessing what was offered.

Eaton's flourish on this lust for possessing which they have tried in the communities they serve. Let Eaton's put on a sale of lighting fixtures at what purports to be a bargain price, and within an hour after 8.30 a.m., their opening hour, a hundred or more of these fixtures will have been sold. Let them put on a bargain sale of leather goods, or cheap jewellery, or confectionery, or suit cases, and they will attract hundreds upon hundreds of buyers, not all of whom want or need what they buy, but it "looked a pretty good bargain," and they bought it.

Right now, in your community you can be sure that not a few families are sending orders to mail-order houses for goods which can be bought locally, perhaps at equal prices. And always families and individuals are buying merchandise that they had no thought of buying until some advertisement made them desirous of having or buying the thing advertised.

Why do not more hardware dealers trade upon this known responsiveness of individuals to the appeal of suggestions? Never mind trying to find an answer to this question. Rather answer this question: Am I a hardware dealer, really trying with all my mind, heart, soul and strength to sell goods to the buyers in my community? The chances are that you'll have to say No.

I put it to you: What are you in business for, if it is not to sell all the people you can all the goods you can in all the ways you can? If you want fun out of your business, find it in aggressive selling. If you want profit out of your business, find it the same way.

Use pointers, too—The cheapest salesman you can employ. Buy space in your local newspapers—good sized space. Don't try to see how little space you can do with, use enough to get business—to make your customers and should-be customers sit up and take notice, and learn just what you want of them, and what you have for them. And work with your advertisement. Don't lean on it, or leave it to do all the work for you.

Do you imagine for a moment that Ashdown's or Eaton's are content with the mere preparation and publication of a good advertisement? You know perfectly well that they prepare themselves to support the advertising they publish. Do likewise and you'll find that your newspaper advertising will take on color and warmth, and that it will win you customers, add to sales and profits, and send you forward to new and higher achievements.

An Advertisement in which the car-owner is particularly appealed to; but not him alone. Advertisements of this definite character are surely interesting, and sell the goods advertised—and often goods not advertised.

Original occupied a space six columns wide. Good display, good copy, and obvious belief that the public will read and respond to this advertising.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE.

THE market reports this week show one of the heaviest budgets of price changes that have occurred in any one week during the past year. The whole trade is amazed at the remarkable advances which are taking place. Prices have long since passed figures which a few months ago would have been thought impossible. All price changes this week are in an upward direction and the lines affected include wire nails, fence staples, fence hooks, O. & A. wire, hay baling wire, cut hay baling wire, wire screen cloth, bale ties, soldering coppers, curry combs, door checks, brass hinges, wrapping paper, cotton twine, turpentine, cotton waste, gold and aluminum paints, galvanized and black sheets, single bit axes, double bit axes, handled axes, auger bits, ship augers, iron washers, gas ranges and hot plates, lapweld iron pipe, paint brushes, alarm clocks, steel thumb latches, Mrs. Potts irons, barn door latches, electric irons and toasters, sweat pads, asbestos paper, asbestos mill-board, lamps and shades, cross-cut saw, hand-saws, buck saws, sleigh bells, lamps and shades, lace leather, tinware, enamelware, japanned wares, stamped wares, tinner's trimmings, stove pipe, elbows, Canada plates, leather belting.

Further advances are expected on butt-weld pipe, screws, bolts, sandpaper, locks, emery cloth, sandpaper, linseed oil. One large American maker of hardware and tools has withdrawn all prices. Another has advanced all prices 10%. A large Canadian hardware manufacturer has advanced all lines from 10% to 25%. The list on poultry netting has been withdrawn and a new and higher list will probably be issued in the near future. Despite the high prices business continues good. Collections are also good. There is a scarcity of many hardware lines and deliveries from the factories are very slow.

MONTREAL MARKETS

MONTREAL, Nov. 9.—A heavy run of price changes, and all upwards, is the feature of the markets this week. Mostly affected are the articles made of iron and steel. Wire products have advanced in price. Nails are up again. Axes show a further increase in price. Augers are increased. Some brass goods have advanced, and also such copper goods as soldering irons. The outlook is very much towards a whole range of further increases in many lines of goods. Business is exceedingly brisk, and the rush of orders for shipment before close of navigation is greater than ever. The first deliveries of skates are being made, and all lines show advanced prices in varying degrees.

Iron and Steel Situation Serious

IRON AND STEEL.—A very serious outlook exists for iron and steel as regards prices and supply for the coming year. Even if the war were to stop suddenly, the mills claim that they have orders in hand from neutral countries to keep them busy for twelve months and more after declaration of peace. Vast shell orders to be filled in the latter half of 1917 mean the use of some 800,000 tons of metal. Shipyards and railroads are buying into 1918, and there is a threatened shortage of rails looming on the horizon. There is anxiety as regards a possible famine of pig iron. The few independent mills which of late had been able to supply at prices lower than the others, have now jumped their prices, and delivery is no better. The outlook is for still firmer conditions.

New Prices on Iron and Steel

New prices are out on iron and steel in the hardware trade lines as familiar in current quotations in HARDWARE AND METAL. Following are the new prices:—(Per 100 lbs.)—Horseshoe iron, $3.35; common bar iron, $3.15; refined iron, $3.35; machinery steel, $3.85; sleigh-shoe steel, $3.80; tire steel, $3.90; toe calk steel, $4.50; mild steel, $3.80; band steel, $4; domestic steel, $3.80.

Black diamond tool steel is up a cent and a half a pound to 13½c, and the whole market for iron and steel is in the firmest possible condition.

Nails and Wires Products Advanced

Standard steel wire nails are up again 15c on base price. They are quoted now at $4.15 base f.o.b. Montreal, $4.10 f.o.b. Toronto, $4.25 f.o.b. Sault, Port Arthur and Fort William, $4.15 f.o.b. Quebec City, and $4.15 f.o.b St. John, N.B., or Sidney, N.S. This advance and advances on other wire products will not come as a surprise. It has been predicted by HARDWARE AND METAL for some weeks past.

Screws and Bolts Next

The tocsin of the trade is sounded in warning that screws and bolts of all kinds are due for a raise in price. Some opinions are as pessimistic as to predict a 50 per cent. increase in the prices of screws.

Axes Add 25c Per Dozen

All lines of axes are up in price by 25c per dozen. Some special lines are increased still more. Joiners' axes are $9.50 per doz. instead of the former $9. Handled, they are $11 (a 50c increase per doz.). Framing axes are now $11 a dozen.

Iron Washers Up

Even such items of iron as iron washers (wrought iron) have not been overlooked in the general increase for iron products. These are now quoted at 20 off, instead of 25 per cent. off.

Ship Augers Advance

Ford ship augers are quoted at 20 per cent. off list, instead of 30 per cent. off list, and Ford's car bitts are 20 per cent. off, instead of 35 per cent. off list.

Plain and Hay Wire Up 15c

Plain wire is up to $4.55 base now, and hay wire is 15c higher as follows: No. 13, $4.45 per 100 lbs.; No. 14, $4.50 per 100 lbs.; No. 15, $4.60 per 100 lbs.

Bale Ties Also Increased

Bale ties are now quoted as follows: No. 12, $4.85; No. 13, $4.95; No. 13½, $5; No. 14, $5.10; No. 15, $5.35; and No. 16, $5.55.

Fence Staples Up 20c Keg

Fence staples, both bright and gal-

vanized, are up in price. The bright now cost $4.35 and the galvanized $5.20—about 20c a keg increase.

Steel Wire Up

Bright steel wire is quoted now at $4.55 base, an increase of 30c on last week's quotations.

Cut Hay Wire Up Also

Cut hay wire is up about 7½ per cent., and the limit is not yet reached in increases in wire, declare the best opinions.

Wire Screen Cloth Up

Wire screen cloth is now at $2.50 per 100 square feet, an increase of 25c, and there is a further rise predicted for this.

Metals Generally Exceedingly Firm

OTHER METALS.—In line with iron and steel the other metals affecting the hardware trade are mostly all in firm market.

Copper Very Strong

Copper is quoted at 33½c to 34c locally, and is very strong. Great domestic demand in the U. S. exists for copper as well as demand for export.

Pig Lead Shortage

A shortage of pig lead exists in Montreal, due probably to cautious buying. The shortage is quite pronounced. Lead is quoted at $9.75 to $10.

Tin Going Higher

Tin now quoted at $48 and $48.50 locally is in very firm and decided market, and probabilities are that tin will be still higher-priced before long.

Sheet Zinc Firm

Sheet zinc is very firm at the prices quoted last week, 25c to 25½c. Spelter is very much firmer at $14 and $14.50. Antimony is quoted at about 16c, and is quiet. Solders, both tinsmiths' and wiping, are as quoted last week—at 30c for tinsmiths5 and 28c for wiping solder.

Canada Plates Short

Quoted prices for Canada plates are merely nominal, as those who have any can get almost any price for them. There is a very great shortage of plates in Montreal. The same is the case as regards terne plates. Stocks have run to the lowest limit in these.

Shelf Goods Show Further Increases

SHELF GOODS.—Other lines of shelf goods increased in price this week include articles of brass and copper, as well as articles of iron and tool steel.

Soldering "Irons" Up

Soldering "irons" have gone up, the increase on these being full 12½ per cent. This is in accordance with conditions in the copper market.

Door Checks Increased

Door checks (Sargeant) are now at plus 33 1-3 instead of plus 25 per cent.

Brass Hinges Up

Brass hinges, middle, narrow, desk, broad, and shutter varieties are all up 5 per cent. in price.

Locks May Go Higher

There is a hint in the hardware trade in Montreal that Canadian-made locks are likely to go higher in price before long.

Turn Buckles Increased

Following new prices are quoted for stub-end turn buckles:—½ inch, doz., $4.70; ⅝ inch, doz., $6.55; ¾ inch, doz., $8.30; ⅞ inch, doz., $9.85; 1 inch, doz., $11.60; 1⅛ inch, doz., $16.40; 1¼ inch, doz., $16.85; 1½ inch, doz., $26.45.

Lapweld Pipe Moves Upward

IRON PIPE.—Higher prices for iron pipe have been predicted for some time past. Lapweld pipe has advanced, and the new prices are shown in a panel elsewhere. It is altogether likely that prices on buttweld pipe will follow suit in the near future.

A big shortage of boiler tubes exists in Montreal, stocks are broken, and many sizes are very hard to obtain. The chances of supplies of cast iron pipe from the States are remote.

Miscellaneous Hardware Advances

Paints and Oils

Some lines of paint have increased a shade this week in the hardware trade. They are: Ramsay's art enamel, aluminum paint, perfection and union gold paint, and Campbell's varnish stain. These are now 30 per cent. off, instead of 35 per cent. Reports on oils, lead, etc., are given in weekly paint market report elsewhere in this issue.

Increases Expected

Increases are expected in sandpapers, emery cloths, and all kinds of roofing papers.

Paper and Twine Up

Wrapping paper and cotton twine are up again, the paper at 10c a pound now, and the twine 40c.

TORONTO MARKETS

TORONTO, Nov. 10.—The number of price changes recorded this week kept wholesale men in a flurry to work out their new charges for goods. It has been a week of exceptionally heavy changes, as will be noted from reading the report. There seems small possibility of arresting the present upward trend. Wholesers are getting weary of the constant strain and turmoil caused by the ever-changing range.

NAILS GO STILL HIGHER.

Another advance of 15c. has taken place on the price of wire nails. Practically all wire products have advanced as shown in the market reports. The new price on nails follows:

F.o.b. London, Toronto, Hamilton and Milton .....$4.10 base.
(Freight equalized on above points.)

F.o.b. Montreal, Gananoque, Collingwod, and Owen Sound .....$4.15 base.
(Freight equalized on above points.)

F.o.b. Port Arthur, Fort William and Sault Ste. Marie.$4.15 base.

Windsor and Walkerville, f.o.b. factory points, carload freight allowed .....$4.17½ base.

Other changes on staples, wire, etc., are given in regular reports.

Withdrawal of Lists On Poultry Netting

POULTRY NETTING. — Manufacturers in Canada have withdrawn prices on all poultry netting. The former discount on the Canadian article was 30 and 10 per cent. off list, while the American is sold from the same list at a discount of 30 per cent. It is understood that the American product has not in any way been changed as yet. The withdrawal of these lists are pointed to by the wholesale men as undoubtedly presaging higher prices when the new quotations are out. These are expected shortly.

All Axes Have Advanced 50 Cents

AXES.—With the advance in other lines of steel goods, axes have this week taken to higher levels and are now quoted 50 cents in advance of recent quotations on most lines. Single bit axes are now quoted at $8 to $10.50 per dozen. Double bit axes are now $12 to $14 per dozen, and hunters' axes $5.50 to $7 and boys' axes $6.50 to $7.50. All the standard brands share in the advance Handled chopping axes are now quoted at $9.50 to $11.50.

Black Wire Cloth Again on Up Grade

WIRE CLOTH.—During the week an

advance of 15 cents per 100 square feet was registered in the price of black wire cloth, making the selling price now $2.50 per 100 square feet in 100 foot rolls and $2.55 in 50-foot rolls. This makes the second advance in this commodity within the past four or five weeks. The firmness in all wire products is stated to be the reason for the upward tendency.

Wire Nails Are Again Advanced 15 *Cents*

NAILS.—As intimated in HARDWARE AND METAL last week the expected advance in wire nails has taken place, a rise in price of 15c per 100 pounds being recorded. This now makes the base price $4.10 at Toronto, London, Collingwood and Owen Sound. This advance follows the firmness in the market for wire products, in fact keeping time with an advance recorded in all wire goods lines. This makes the second advance in two weeks and establishes a new high level for the price of standard wire nails.

Wire Products Go Up Still Again 15c

WIRE.—An advance was put into effect by the manufacturers of wire this week which provides for an increased price of 15c per 100 pounds base. The advances affects cut hay baling wire, fine steel wire, hay wire in coils and wire bale ties. Fence staples, however, share in the advance as being one of the wire products. Bright staples are now quoted at $4.40 per 100 pounds and galvanized at $5.25 per 100 pounds, with the usual extra of 25c per 100 pounds when put up in 25-pound boxes.

Another Advance in Builders' Hardware

BUILDERS' HARDWARE.—Manufacturers of the Sargent line of goods have announced another advance in all their lines of builders' hardware and tools. The new prices cover everything manufactured by this company. The Stanley Works, also extensive manufacturers of hardware, have withdrawn all prices and will give quotations only on application. Local jobbers find it difficult to keep track of things in the labyrinth of ever-changing prices.

All Enamelware and Pieced Tinware Advances

ENAMELWARE. — A sweeping change in the price of all enamelware and pieced tinware was put into effect this week which provides for an increase in price on almost the entire line from 5 to 15 per cent. Copper boilers that were formerly quoted at 10 per cent. off list are now at list prices. Copper tea and coffee pots, formerly at 10 per cnt. off list, are also now at list. In the japanned ware the colored is now quoted at 15 per cent. off list as compared with 22½ per cent. formerly, while the japanned coal hods are now 10 per cent. off list.

In the enameled ware Scotch grey is now 65 per cent. off list where formerly it was 65 and 10. White ware, formerly quoted at 66 2-3 per cent. off, is now 60 and 10 per cent. off list. White decorated now carries a discount of 5 per cent. as compared with 12½ per cent. formerly. Colonial is now 50 and 2½ per cent. off, as compared with 50 and 12½ per cent. formerly. Premier, formerly 40 per cent. off list is now 35 per cent. In the galvanized ware such as pails, washtubs, coal hods, etc., there is no change from previous quotations. These are all quoted at list with the exception of galvanized coal hods, which call for 10 per cent. to be added to list prices.

NEW DISCOUNTS ON COPPER AND NICKEL WARE, JAPANNED WARE, ENAMELED WARE, PIECED TINWARE AND STAMPED WARE.

Copper and Nickel Ware.

Copper boilers and kettles, net list.
Copper tea kettles and coffee pots, net list.

Japanned Ware.

Colored, 15%; white, 7½%.
Coal hods, 10%.
Japanned feed pans, 30%.

Galvanized Ware.

Dufferin pattern, English pattern washtubs and all other lines are net list.
Galvanized coal hods, add 10% to list.
These prices are the same as recent quotations.

Pieced Tinware.

Discount on all lines, 5%.
Copper bottom tea kettles and boilers, add 10% to list.

Stamped Ware.

Plain, 60 and 10%.; retinned, 60 and 5%.
Tinners' trimmings, plain, 60 and 10%.
Tinners' trimmings, retinned, 60 and 5%.
Tinners' trimmings, general, 20%.

In the japanned white wear the new discount is 7½ per cent. as opposed to 17½ per cent. formerly. In the japanned feed pans the discount is 30 per cent. off list, whereas the former discounts were 35 and 5 per cent.

In the pieced tinware the discount has been changed on all lines from 10 per cent. formerly to 5 per cent. under the new prices. Tin pieced ware in copper bottom tea kettles and boilers must now have 10 per cent. added to list prices. Formerly they were sold at list.

In plain stamped ware the new discount is now 60 and 10 per cent. as opposed to 66 2-3 per cent. formerly. On the retinned stamped ware the discount is 60 and 5 per cent. where formerly it was 60 and 10. Tinners' trimmings, plain, are also now 60 and 10 per cent. off list and retinned tinners' trimmings are 60 and 5 per cent. General tinners' are now 20 per cent. off list as compared with 27½ per cent. formerly.

Oil Storage Systems Are Due to Advance

OIL STORAGE SYSTEMS. — By reason of the recent heavy advance in the steel market one of the large oil companies, which also handles a line of gasoline and refined oil storage tanks, has been compelled to anticipate an advance in these articles in the near future. The advance has not yet been put into effect but it is expected that by next week an advance of fully 10 per cent. will be recorded.

Stovepipes and Elbows Increase

STOVEPIPES. — Stovepipe elbows and stovepipe have shared in the advances in common with many other lines during the past week. The new discounts provide for a substantial advance in price. The ordinary black stovepipe elbows are now quoted at 17½ per cent. off list, and the ordinary nestable stovepipe at 5 per cent. off list. Strainer wire prices are given only on application.

New Zealand Hemp Now Being Used in Rope

ROPE AND TWINE.—One of the recent developments in the rope situation in Canada is the manufacture of New Zealand hemp rope. This is the only hemp grown in the British Empire suitable for the manufacture of rope and larger quantities of it are each year being utilized by manufacturers. The manufacturers do not claim that it is equal to first-grade Manila, but they assert that it is better for general use around a farm than a second-grade Manila. It has the advantage of being 4½c cheaper per pound on base sizes than the first-grade Manila. Considerable quantities of this New Zealand hemp have in the past been turned into binder twine.

Generally the situation in rope products is holding steady. Sisal is very firm, with rumors of the likelihood of higher prices in the sisal fibre in the not distant future. The management of the Yucatan Commission in control of the fibre, with headquarters at New York, has been changed, and it is pointed out that changes of this nature have in the past sometimes presaged higher prices. In Manila lariat rope there has been an increase in the differential over the base price of 2½c per pound on both the three-strand and four-strand on all sizes. This makes the price for the three-strand 4c above the base price of 22½c and 5c for the four-strand above base. A good demand for wrapping twine continues.

Gas Ranges Record an Advance of 5 Per Cent.

GAS RANGES.—An advance of 5 per cent. on all the various grades of gas ranges has been put into effect by one of the manufacturers. At the same time as this advance was made, ordinary hot plates, angle iron hot plates, and oil and gas stove ovens were quoted at new list prices, which provided also far an increased price.

Cotton Waste Goes Up 1¼c. Per Pound

COTTON GOODS.—As intimated in HARDWARE AND METAL last week that the price of cotton waste would in all probability advance the first part of the present week, new prices have gone into effect and provide for an increase from ¾c to 1¼c per pound. On the polishing waste there has been an advance of 1c, the selling price now being 18c per pound. On the white wiping waste there has been an advance of 1¼c per pound. The new prices on these brands range from 13c to 17c per pound. On the fancy colored wiping waste there has been an advance of 1¼c, while on the lower grades of the colored there have been advances of ¾c to 1c. Wool packing waste remains the same as previous quotations, the range being from 10c to 20c per pound. Washed cotton wipers also hold at previous quotations of 12c for white, 9c for mixed colored and 8c for dark colored.

Lapweld Pipe Has Again Advanced

WROUGHT PIPE.—Considerable advances have been recorded in the price of lapweld pipe in all the various grades, as announced by new lists that have been issued during the week. The increases run all the way from 37c net on the standard black 2-inch pipe to $12.40 per 100 feet for the 10-inch pipe. The galvanized lapweld increases in a corresponding degree. The new price list will be found in the current quotations.

All Lines of Brushes Advance About 15%

PAINT BRUSHES.—One manufacturer of paint brushes this week put into effect an advance on all lines of bristle paint brushes, which provides for increases ranging from 5 to 25 p.c. On one of the standard lines of brushes, for instance, commonly known as the "pound brush" among painters, this line to the retail trade has advanced approximately $3 per dozen, and are now selling in the neighborhood of $20. In brooms there still continues a firmness. Some of the manufacturers' agents are refusing to book orders for future delivery at present prices as far away as January. Some will only take them at 20 per cent. advance on present prices.

THE ALTITUDE TEST.

—*The Vancouver Province.*

Soldering Irons Advance

During the week an advance was recorded in the price of soldering irons, the new price being 61c per pound base.

New Discount on Curry Combs

The manufacturers have issued a new discount on curry combs, making the new quotation 15 per cent. off list, instead of 25 per cent., which was formerly the prevailing discount.

All Saws Are Up

Local jobbers have been apprised of the fact that all saws are now quoted by the manufacturers at an advance of 15 per cent. over recent quotations. This includes crosscuts, handsaws, bucksaws, and all other classes of this make of goods.

Sleigh Bells Up 10 Per Cent.

At least one manufacturer of sleigh bells has seen fit to increase the price on all lines of their goods to the extent of 10 per cent. over recent quotations.

Lamps and Shades Up

A line of nickel lamps and shades carried by one of the large oil companies have been advanced 5 to 10 per cent. Glassware parts of these lamps has also advanced in a like amount. Another advance in these goods is expected in the near future.

All Ingot Metals Remain Firm

The metal markets continue steady and in most cases firm. The copper situation is still the principal feature of interest and higher prices are looked for. The demand for copper is very heavy, and few producers hold any metal for the first quarter of 1917. The spelter situation has improved and quotations are holding firm, with producers still disinclined to sell freely.

COPPER.—The export and domestic demand for copper continues heavy, and some sellers have disposed of all their production up to July, 1917, while few have any metal for sale until after the first quarter. The market is very strong, and a further advance would not be surprising. Local quotations are firm at 30-31c.

TIN.—Tin advanced recently in London, the reason not being explained. The situation in New York appears to be somewhat complicated, and the increase in the visible supply has not depressed the market is is usually the case. Permits to ship tin from London to New York are still difficult to obtain. Local quotations are firm at 47c per pound, and the demand is good.

SPELTER.—The market continues strong and producers are reported to be still disinclined to sell freely, believing that prices will go higher as the price of ore has advanced about $7.50 per ton, thus increasing the cost of producing spelter. Prices are a little higher locally at 12½c to 13½c per pound.

LEAD.—Quotations are firm, but the market continues quiet, although there are indications of more activity in the near future. Lead is unchanged locally at 9¼c per pound.

ANTIMONY.—The market is easier and business dull. Quotations are unchanged at 18c per pound.

ALUMINUM.—The demand is rather quiet, but the market is steady at unchanged quotations. Local price, 68c per pound.

Pig Iron

Pig iron is higher this week by $2 per ton, and the market is excited.

Premier Sheets Advance

Premier galvanized shells have advanced 5c per 100 lbs., and present quotations f.o.b. Toronto and Hamilton are as follows:—10¾ oz., $6.80; U. S. 28, $6.50; U. S. 26, $6.20; 22 and 24, $6.05; 18 and 20, $5.90; 14 and 16, $5.75.

Leather Belting And Lace Leather Up

BELTING.—An advance from 5 to 10 per cent. was made in lace leather and leather belting during the past week, the new prices going into effect on Monday, Nov. 6. Lace leather in sides is now quoted at $1.20 per pound as compared with the previous price of $1.10. Lace leather cut is now $1.40 per pound as compared with the former price of $1.30. The new discount on standard belting is 30 and 10 and 10 per cent., whereas the former discount was 40 and 10. On extra belting the new discount is 30 and 10 as compared with 40 per cent. formerly.

LONDON MARKETS

LONDON, Nov. 9.—A large number of important price changes have taken place this week. Advances in price have been more numerous this week than for several week's past. There is a scarcity of many lines of cutlery in shelf hardware. Further advances on many hardware lines are expected in the near future.

Nails and Wire Products Advance in Price

An advance of 15c per keg on wire nails makes the price locally $4.10 base. The market is firm at the advanced prices.

O and A wire has advanced 15c per 100 lbs. and the new base is $4.15 making the net prices as follows:—No. 10, $4.71 per 100 lbs.; No. 11, $4.77; No. 12, $4.85; No. 14, hay baling $4.95 per 100 lbs.

Fence Staples and Hooks Up 20c

Fence staples have advanced 20c keg and are now quoted as follows:—

Bright kegs ..... $4.40 per 100 lbs.
Bright 25 lb. boxes..$4.65 per 100 lbs.
Galv'd kegs ..... $5.25 per 100 lbs.
Galv'd 25 lb. boxes .. $5.50 per 100 lbs.

Fence hooks galvanized have advanced to $5.25 per 100 lbs. in kegs and $5.50 per 100 lbs. in 25 lb. boxes.

Stone Pipe Elbows Up

Stove pipe elbows, light pattern have advanced and are now quoted at $1.45 doz. for 6 inch, and $1.60 doz. for 7 inch.

Sargeant and Co. Goods Higher

Sargeant and Co. have announced further advances of about 10 per cent. on all lines.

Auger Bits Up

Common auger bits have advanced and are now quoted at 65 per cent. off; Gilmore auger bits are now 60 per cent. off list.

List Advances on Hay Fork Handles

List prices on hay fork handles have been advanced and a discount of 30 per cent. now applies to the list prices shown below:—

Hay fork handles straight, second growth: 4 ft., $2.75; 4½, $3.15; 5, $3.50; 5½, $3.85; 6, $4.20.

Hay fork handles bent, second growth, 4 ft., $3.15; 4½, $3.50; 5, $3.85; 5½, $4.20; 6, $4.60.

Asbestos Paper Up

Asbestos paper has advanced to $6 per 100 lbs. and mill board to $7 per 100 lbs.

Knives and Forks Up

Pearl handled knives and forks ond other lines of case goods have advanced 10 per cent.

Ash Sifters Up

Common wood ash sifters have advanced to $2 dozen. Rocker sifters are quoted at $4.60 each and Banner at $2.40. There is a good demand for ash sifters on account of the high price of coal.

Sweat Pads Up

An advance has taken place in the price of sweat pads and common yellow are now quoted at $5.25 doz.; and Ventiplex at $6 doz.

Cotton Twine Up

Cotton twine 3-ply has advanced to 39c lb.; No. 4 is now quoted at 42c lb.

Lace Leather Up 10c

Lace leather has advanced 10c lb. and sides are now quoted at $1.35 lb.; cut laces at $1.50 lb.

Alarm Clocks Advance

Alarm clocks have advanced again. "Lookout" has advanced 10c and is now quoted at $1.20; Sleepmetre has advanced 15c and is quoted at $1.25; Big Ben and Baby Ben remain unchanged at $2.20.

T. F. Goods Advance

Several T. F. lines of shelf hardware have advanced from 10 to 25 per cent., including steel thumb latches, barn door latches, and Mrs. Potts' irons. Steel thumb latches are now quoted at: No. 2, $1.35 doz.; No. 3, $1.80 doz.; No. 4, $3.25 doz. Barn door latches, No. 5, $1.80 doz.; No. 9, $2.75 doz. Mrs. Potts' irons, plain are quoted at $1 set; and nickel plated at $1.15 set.

Bucksaws Higher

New prices showing advances from 75c per doz. up have taken place on bucksaws. The new price on the happy medium is $6.50 doz.

Electric Goods Up

Canadian Beauty electric goods have advanced and the discount is 25 per cent. from a new list which has been issued. A further discount of 5 per cent. is allowed on orders of $50 or over purchased at one time.

Screen Wire Up

Screen wire cloth has advanced and is now quoted at $2.50 per 100 sq. ft. in 100 ft. rolls and $2.55 in rolls of 50 ft.

Poultry Netting Go Higher

Manufacturers have withdrawn prices on poultry netting and new lists when issued will show advances. At present the jobbers are quoting 30-10 per cent. off old list on 1 in. and 2 in. mesh for Canadian netting.

Oil Remains Unchanged

Linseed Oil.—Linseed oil remains unchanged at last week's prices, as follows:—

	Raw	Boiled
1 to 2 barrels	$1.12	$1.15
3 to 5 barrels	1.11	1.14
6 to 9 barrels	1.10	1.13

Lead Firm and Unchanged

White Lead.—White lead in oil remains firm and unchanged at $13.95 per 100 lbs. in ton lots, and $14.25 in less than tons.

Turpentine Up 2c

Following firmness in the primary markets turpentine has advanced 2c per gallon and is now quoted in single barrels at 74c per Imperial gallon, and 73c

per Imp. gallon in 2 to 4 barrel lots; 5 gal. lots are quoted at 81c.

Fence Wire Unchanged

Galvanized fence wire remains unchanged locally and is quoted as follows:—Barb, $4.25 per 100 lbs.; No. 9 plain, $3.90 per 100 lbs.; No. 12 plain, $4.05 per 100 lbs.; No. 13 plain, $4.15 per 100 lbs.; No. 9 coil spring, $3.95 per 100 lbs.; No. 10, O. & A., $4.56; No. 11, $4.62; No. 12, $4.70; No. 14, hay baling in coils, $4.80.

Glass Is Firm

Sheet glass is firm and is in good demand. Single diamond is quoted at 20 per cent. off; double diamond at 20 per cent. off; cut lights at 50-5 per cent. off.

Putty In Fair Demand

Putty is in fair demand and is firm and unchanged. Quotations are as follows:—Standard 100 lb. drums, $3.00; 25 lb. drum, $3.10 per 100 lbs.; Pure, 100 lb. drums, $3.70 per 100 lbs.; 25 lbs., $3.80 per 100 lbs.

WINNIPEG MARKETS

WINNIPEG, Nov. 9.—Further activity in the markets and price changes all upwards are the feature of the trade this week. Prices which a year ago were thought impossible have been reached and passed, and still prices continue to soar.

Nails and Wire Go To Higher Levels

Wire nails have again advanced 15c per keg, and are now quoted at $4.55 base Winnipeg, and $4.15 base Fort William. Annealed wire, bale ties, and bright tinners' wire have all advanced 15c per 100 lbs. Wire fence staples have advanced 20c, and are quoted at $4.25 Fort William and $4.65 Winnipeg.

Galvanized sheets have advanced 75c per 100 lbs., and black sheets 15c per 100 lbs.

Barb Wire Goes Higher

The latest advance in barb wire recorded this week brings this line up to an extremely high figure. It is almost sure that the high prices now prevailing will have a tendency to increase sales of woven fencing. This latter line has also advanced, but not in proportion to barb wires. Prevailing quotations on barb wire are noted herewith:

	Fort William.	Winnipeg.
Lyman	$3.60	$3.90 spool.
Glidden	3.45	3.75 „
Baker	3.40	3.70 „

Hexagon Poultry Netting Higher

New prices have been issued on hexagon poultry netting during the past week, the advanced quotations being based on a discount of 37½ per cent. This brings a net price on the 2-inch mesh as follows:—2 x 24 in., $2.13 roll; 2 x 36 in., $3 roll; 2 x 48 in., $3.90 roll; 2 x 60 in., $4.80 roll; 2 x 72 in., $5.75 roll.

Canada Plate Goes To Higher Levels

Two important lines are again on the upward trend, and the sharp advance in Canada plate noted below is almost sure to be followed by further increases being made in the price of riveted and patent stovepipes.

In addition to the advance in price on Canada plate, it is noted that a shortage prevails for this commodity, which may seriously affect next season's business. However, no definite statement can be made as yet, but it is more than likely that sufficient plate will be available to take care of the demand. The new prices issued are on the following bases:

	Half polished.	Full polished.
18 x 21	$5.75	$7.25 per box.
18 x 24	5.75	7.25 „ „
20 x 28	6.00	7.50 „ „

Bar Iron Goes Up 15c. Per 100 lbs.

An advance is also noted on bar iron of 15c per 100 lbs., bringing to-day's base price up to $3.50.

Linseed Oil Unchanged

The better weather conditions have steadied the grain markets somewhat, and flax remains at about the same level. The result of this is shown in the fact that no further changes are recorded in the price of linseed oil for the week, and it is possible that a decrease may soon be noted over to-day's exceedingly high figures.

Raw linseed oil is quoted at $1.31 per gallon for raw and $1.34 for boiled in single barrels.

Almost every day sees further advances being recorded in various staple lines. During the past week revisions in prices have included the entire line of padlocks, wheelbarrows, drag road scrapers and various lines of cutlery. In replacing stock, it is necessary to ask increased prices to cope with the added manufacturers' cost. Apparently the end is not yet in sight, and people are beginning to get restless under the continued advances.

Business Brisk Despite High Prices

Business for the month just past has been fairly brisk, and the volume of business handled has been surprising in some respects when the adverse weather conditions are taken into account. It is pleasant to note, however, that better weather has prevailed during the past week, and with threshing operations resumed, prospects for a satisfactory month's turnover for November are bright.

Retailers generally are taking shipments of goods intended for Christmas selling. This is noted in the amount of orders being handled for silver-plated ware, cut glass, pocket cutlery, scissors, skates, sleighs, express wagons, automobiles, etc. Business in these lines is fairly brisk, and jobbers advise that early buying will be to the advantage of any merchant, as further stocks will be almost impossible to get before the end of the year.

Good Demand for Stoves

There has been a splendid sale of stoves during the past few weeks, but stocks now are becoming badly depleted, and no prospects of further stocks for a great many lines. Labor is so scarce in the manufacturing centres that manufacturers are finding it impossible to keep up with their orders, and in many cases contracts have been cancelled. This leaves the jobbers in a very bad position, and will react, of course, on the retailer, who expects to get his supplies from the jobber during the next two months.

COL. BALLANTYNE ON ACTIVE SERVICE

Lt.-Col. C. C. Ballantyne, vice-president of the Sherwin-Williams Co., of Canada, Limited, and commanding officer of the 245th Overseas Battalion of the Canadian Grenadier Guards, has leave of absence from his directors, to apply for such time as he is on active service. He is naturally giving most of his attention to the recruiting of his regiment at present and has met with remarkable success, particularly in the matter of the personnel of his officers. Col. Ballantyne has drawn on resources that are denied less fortunate individuals by getting selected lists from his friends in business circles, of their friends and employees who might constitute desirable recruiting material. Hence the picked quality of the regiment. In spite of the demands made upon him in this connection, however, he manages to keep in close touch with business. In addition to the office he occupies with the Sherwin-Williams Company, Col. Ballantyne is vice-president in the Canada Paint Company, vice-president of Lewis Berger & Sons, Limited, London, England, a director of the Canada Cement Co., Canadian Explosives Co., Montreal Locomotive Works, St. Lawrence Sugar Refinery, Merchants Bank of Canada and as well is interested in many other forms of business and social activity.

How Canadians Are Handicapped

Canada's Huge Fire Loss and Its Effect Upon Production and Competition for Foreign Trade—A Serious Problem

The fire loss of Canada has reached enormous proportions. The drain upon her financial resources constitutes an economic loss which no country can afford and still meet competing nations on an equal footing.

The war has had far-reaching effects upon commerce. European countries, in greater or less degree, are realizing their latent powers, production is being speeded up, resources are being developed, trade openings are being sought and established. Prior to the war Canada found herself handicapped in any scheme of trade expansion by the lower cost of production in Europe. It therefore follows that, with the realization by European countries of their commercial possibilities, this trade handicap will be greatly accentuated.

On the basis of averages, and from the data available as to the cost of insurance and upkeep of fire departments, the following comparisons may be deduced:—

For the past three years the average rate for fire insurance in Canada has been $1.19 per $100 of insurance. The average rate in Sweden is .40, in Austria .30, in England .23, in Germany .22, in France .21, in Spain .19, and in Italy .19.

A Canadian employer of labor with 100 employees, carrying an insurance of $50,000 on plant and buildings, and, assuming that $2,000 insurance is carried or paid for by each employee on furniture and dwelling—or a total of $250,000—would, on the foregoing basis, have to provide in wages and overhead charges $2,950. His competitor in Sweden would only require $1,000, in Austria $750, in England $575, in Germany $550, in France $525, in Spain and Italy $475.

For upkeep of fire departments Canada is heavily taxed in comparison with competing countries. In 1914, Paris, France, with a population of 2,846,986, had a total fire department expenditure of approximately $656,479, or 23 cents per head. Toronto, for the same year, with a population og 470,144, spent $675.146 on her fire department, equal to $1.43 per head.

The Toronto manufacturer—and this is only an example for all Canada—has to provide for himself and family and for each employee and his family $1.43 to cover fire department costs, as against the 23 cents his Paris competitor must provide; or, with an average of five to a family, for his 100 employees, he would have to pay in salaries and wages $722.15 as against $116.15 by his European competitor.

For insurance and upkeep of fire department the Toronto employer of 100 hands, as representative of Canadian industry, must pay $3,672 against $641 in Paris, a handicap equal to $30 per employee.

The census report of 1911 gives 515,203 as the number of employees engaged in manufacturing in Canada; consequently at $30 per head, there is a handicap of $15,456,090 against Canadian manufacturers in the cost of fire insurance and municipal fire departments.

The salaries and wages paid to these 515,203 employees amounted to $241,008,416, an average of $467.80, or approximately $9 per week. The foregoing handicap of $30 per employee represents the wages of 3.3 weeks of each employee.

In 1910 the products of Canadian manufacturers were valued at $1,165,975,639. This charge for insurance and municipal fire protection therefore represents an added tax of 1.3 per cent. upon Canada's entire output of manufactures.

The fact that much the larger portion of this amount is buried in the pay-roll can be accepted as the reason why our employers have given so little attention to the question. The charge must be met, however, whether by direct or indirect means.

Employers complain of the rising cost of manufacturing; employees complain of the rising cost of living and demand increased wages. In view of the foregoing, employers should seriously consider reduction of the burden imposed by the enormous destruction of our created resources by fire — that their earnings may not be reduced by these charges, and thus remove one of our heavy handicaps before Canadian employers and employees meet world competition under the new trade conditions which will develop after the war.

EFFICIENCY HINTS

On Delivering the Goods

A man may at the cost of considerable effort win a hearing for himself and his goods with a valuable customer and then because he falls down on delivery of the goods, lose all. No use in striving for the hearing if you haven't got the goods.

The Victory of Defeat

The man who can snatch victory from defeat is the man who can prove that the eighty cent garbage pail he is selling is better and cheaper for the money than the sixty cent one of his competitor that is thrown in his face by a customer. The quotation, not the garbage.

Tried But Not True

Possibly you were inspected as well as rejected. To be turned down — your goods or you—may mean that you did not pass the test, instead of meaning that your case was not looked into. Good brains and good goods are too valuable a commodity to be overlooked lightly. Even some bad ones are given a look-in occasionally so as to be on the safe side. You were four-flushing; it didn't go, so you must.

Thoughts and Habits

A thought becomes an idea, an idea becomes an act, and act becomes a habit, and by the time you awake to the fact that it is a habit, it is so firmly entrenched that there is no breaking it. Think right.

Get Right at Home

Get right with yourself and you will radiate rightfulness to all those about you. It will permeate your every thought and action and unconsciously build for you an edifice of right doing that will tower over all the wrongdoing of yourself and others.

PAINTING OF FARM IMPLEMENTS.

The painting of farm implements for their protection and preservation has apparently received very little consideration by Canadian farmers, if one may judge by the information secured by the Commission of Conservation in the survey conducted on 100 farms in each of four counties in Ontario. In Waterloo, not one farmer who painted his implements, was found among the hundred, in Carleton only one, in Northumberland three, and in Dundas eleven.

The use of paint on both the wooden and metal parts of machinery gives a protecting cover against deterioration by use and weather, apart altogether from the general improvement in appearance. The cost of prepared paint for the purpose is very small, and experience in the work is unnecessary.

The initial cost of farm implements means to the farmers a large outlay. This investment should be protected. Depreciation from rot and rust is rapid, when once these conditions are established. For the actual money saving as well as for the more prosperous appearance it gives to the farm and farmer, the regular overhauling and painting of the farm implements should be a recognized part of the year's work.

EVENTS IN THE TRADE

Business Changes

Arcola, Sask.—J. S. Elliott, tinsmith, has commenced business.

Joliette, Quebec.—S. Costellean, hardware merchant has sold his stock.

Toronto, Ont.—Jas. McKinley, hardware, Toronto has sold out to H. B. Wilcox.

Edson, Alta.—Thomson Hardware Co., has removed stock to Grand Prairie, Alta.

Delisle, Sask.—H. E. Pickett, tinsmith, has been succeeded by H. E. Trift.

Liberty, Sask.—H. F. Smith & Co., hardware has been succeeded by E. J. Gaetz.

Kenora, Ont.—D. H. Sutherland, hardware and furniture has sold out to Mrs. W. White.

Minto, Manitoba.—John Worthington, hardware merchant, is discontinuing business.

Calgary, Alta.—The National Enamelware Company of Canada have commenced business.

Markinch, Sask. — F. Moscovitch, hardware and grocery dealer, has sold stock to N. Hechter.

Cadillac, Sask. — The McGillvary Hardware Company have been succeeded by The J. A. McGillivray Co.

Personal

T. A. Carroll has been appointed manager of the advertising department of the E. C. Atkins Company, Indianapolis, Ind. and Hamilton, Canada. Mr. Carrol succeeded H. T. Benham who resigned to enter another field of endeavor. Mr. Carrol has been in charge of the company's trade service department for a number of years, working in conjunction with the advertising department.

Retail Merchants Meet

At a recent meeting of the hardware section of the Winnipeg branch of the Retail Merchants' Association of Canada, the following officers were elected for the coming year: President, W. A. Templeton; first vice-president, C. E. Falconer; second vice-president, O. B. Harvey, of Harvey & Eastwood; secretary, W. H. Bridgeman; treasurer, A. E. Wyatt.

Killed In Action

Corp. Donald M. Jeffrey, age 22 years, who prior to enlisting was on the staff of Ecclestone's Hardware, Bracebridge, Ont., has been killed in action. Don as he was familiarly known was also associated with a hardware firm at Orillia for some time. His father is Wm. Jeffrey, of Stratford, Ont., one of the veterans of the McClary Mfg. Co., travelling staff. Corp. Jeffrey enlisted in July last as a private. He entered the trenches two months later.

Late Corp. Donald M. Jeffrey, killed in action, Oct. 15.

W. R. Notman Killed

Lieut. William Russell Notman was killed in action on Oct. 25. He joined an infantry battalion recruited at Winnipeg a year ago, and two months ago went to France as a machine gun officer in that unit. For six years prior to leaving for overseas he had been western representative of the Dougall Varnish Company, and made his headquarters in Winnipeg. Lieut. Wilfred M. Notman was killed at the Ypres salient last June.

Obituary

Peterboro, Ont.—The death occurred here of J. J. Turner, Sr., of J. J. Turner & Sons, manufacturers of awnings.

St. John, N.B. Notes

Harold Chesley of the staff of T. McAvity & Sons, St. John, received a handsome wrist watch from the other members of his department this week on the eve of his departure to join an overseas unit.

William Kerr, formerly senior member of the wholesale hardware firm of Kerr & Robertson, and now residing in Summerland, B.C., has received word that his son, Lieutenant Gordon Kerr, aged twenty-eight years, has been killed in action. Lieutenant Kerr left Canada this spring with a siege battery and, when he reached the front fired the first round from the first gun of the new heavy type in use by the British.

Captain Gordon McRae Johnston, secretary of the Maritime Nails Works, who was invalided home after service at the front with the 26th battalion, was united in marriage with Miss Jessie Likely, daughter of J. A. Likely, one of St. John's leading citizens and president of the Board of Trade, on October 31. The ceremony took place in Centenary Church, St. John, Rev. W. H. Barraclough officiating. Since his return Captain Johnston has been appointed to the staff of the New Brunswick command as bombing officer for the province.

Elected to Board of Directors

At the third annual meeting of the Association of Canadian Advertisers, the following were elected to the Board of Directors:—H. E. Michell, Imperial Varnish & Color Co., Toronto; A. A. Bettues, Gillette Safety Razor Co., Montreal; B. H. Bramble, Goodyear Tire & Rubber Co., Toronto.

Boston Varnish Co. Enlarging Plant

Boston Varnish Co., makers of Kyanize varnishes and enamels, Everett station, Boston, now have forty men working on their new four storey brick factory building, which will be 115 ft long and 55 feet wide, well construction and latest up-to-date features throughout. They are also putting up another brick building, two stories, 90 feet by 40 feet for their office and advertisng departments. These new buildings together with the new battery of ten melting fires just completed will enable the company to double its output during the coming season.

HARDWARE LETTER BOX

Carbon for Telephone Batteries

T. Avard, Lyster Station, Que.—Will you let me know where I can buy pure carbon powder, also in stick form, for telephone batteries?

Canadian National Carbon Company, 265 Adelaide Street W., Toronto, Ont.—Ed.

Improved U. S. Cream Separator

Kelly & LeDuc, Hull, Que.—We would be pleased if you could let us know the address of the concern handling the Improved United States Cream Separator.

P. T. Legare, St. Paul Street, Quebec City, Que.—Ed.

Perfect Idea Range

S. S. Balsdon, Cargill, Ont.—Please advise where we may secure repairs for the Perfect Idea Range.

McIntyre — Taylor, 507 Queen Street W., Toronto.—Ed.

U. S. Pottery Makers

Central Hardware and Paint Store, 836 St. Lawrence Boulevard, Montreal. —Kindly give us names of U. S. pottery manufacturers.

Colesburg Pottery Co., Colesburg, Ia.; Detroit Flower Pot Co., Detroit, Mich.; Findlay Clay Pot Co., Findlay, Ohio; Johnson Pottery Co., Mount Gilead, Ohio; Peters & Reed Pottery Co., Lanesville, Ohio; Syracuse Pottery Co., Syracuse, N.Y.; Wassall Fire Clay Co., Columbus, Ohio; Uhl Pottery Co., Evansville, Ind.—Ed.

Rocking Horses and Rockers

Emerson & Fisher, Ltd., St. John, N.B.—Please give us names of manufacturers of rocking horses and shoo-fly rockers.

Shoo-fly rockers are made by the McFarlane Ladder Works, Toronto; the Schultz Bros. Co. Brantford, Ont. Rocking horses are made by Victoria Toy Co., Victoriaville.—Ed.

Auger Bits and Chisels

Jas. Simmonds, Ltd., Halifax, N.S.—Please give names of Canadian firms making auger bits, centre bits, gimlets, ships' augers and chisels.

Auger bits are made in Canada by the Russell-Jennings Mfg. Co., St. Catharines, Ont.; G. Gilmore & Co., Montreal.

Chisels are made by the Josiah Fowler Co., St. John, N.B.; the Quality Tool Works, Montreal, Que.—Ed.

Perfect Home Heater

Collingwood Hardware, Ltd., Collingwood, Ont.—Kindly give name of the manufacturer of the No. 45 Perfect Home Heater.

Can any of our readers kindly supply the desired information?—Ed.

MEETING THE CUSTOMER AT THE DOOR

(Continued from page 27.)

A wide platformed door makes unloading a simple matter. At one end is a bran and seed room, opposite it is a coal oil pump with a tank holding 250 gallons. While just inside is a gasoline pump with a 300 gallon capacity at the other end of the room are the bins for horse shoes of all sizes and big drums of rope ranged one above another. There is no need to clutter up the store by unloading goods through it. All the heavy, rough work of the business is done behind the scenes.

A Cellar Store Room Modernized

But even here the roughest work of all is not done. The store stands on the side of a hill and a driveway leads around to this lower side. Here there is an entranceway to the cellar. Wide doors enable a team to back in and unload. At one end is a cement platform raised about a foot. This is for heavy barrel oils. Here they can be tipped and emptied without the necessity for the usual Herculean efforts. To one side are racks for bar irons and over these again a storage for glass. The whole building is furnace heated and lighted with acetylene gas.

The store is the work of a man who has spent the most of his life in the hardware business and who knows its requirements. Certainly there have been very few mis-steps in this new store,, very few places where even the most carping critic could suggest a change. Mr. Johnson's idea is a business he could be proud of. One might think he would be amply satisfied.

NEW PAINT COMPOSITION

Two New Zealand men have invented a new paint which they describe as follows:—This invention relates to improvements in the known paint compositions in which animal blood is embodied with other paint bodies of different kinds. The invention consists in the combination with a paint base made of oxide of lead, and oil, of a proportion of animal blood well mixed with such base. For instance, a suitable composition may be made up of lead oxide, boiled oil and blood, the relative proportions of which will vary for the different purposes to which the paint is to be put.

A suitable proportion useful for treating iron roofs and walls consists in 2 lb. of lead oxide, 2½ pints of boiled oil and 5½ pints of blood; while for use on ship's hulls the mixture most suitable is 2 lb. lead oxide, 2 pints of boiled oil and 5 pints of blood. The approved manner of mixing consists in first mixing a small portion of the oil with the oxide until the mass is thickened, then heating the mixture and adding thereto mixtures of the remainder of the oil and the blood, while maintaining the heat. These mixtures of the oil and blood will vary in the relative proportions of the blood to the oil, the blood increasing in proportion to the oil with each successive mixture added to the whole. These mixtures are added slowly to the whole and are thoroughly stirred into it. Paint of any desired color may be produced by the addition of suitable coloring ingredients and the paint when prepared may be stored in cans or drums in the usual way.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1528. **Handles.**—A South African firm of wholesale dealers requests samples and prices and particulars of delivery on hammer, pick, axe, rake, tool, broom and other handles.

1531. **Brushware.**—A South African firm of wholesale dealers is prepared to purchase Canadian brushware, and asks for catalogues and price lists.

1534. **Hardware.**—A South African firm of wholesale merchants asks for catalogues, price lists and other particulars, and samples when possible, of hardware, household and building including enamelware, aluminumware and steel ceilings, lampware, cutlery, bolts and nuts, and nails.

1535. **Wire.**—A South African firm of wholesale merchants asks for quotations and samples where possible on barbed, fencing and belting wire, also wire netting.

CATALOGUES AND BOOKLETS

New "Red Devil" Catalogue

Smith & Hemenway Co., Inc., of New York City, have just issued their latest catalogue, known as "The Seventh Edition of the Green Book of "Red Devil" Tools & Hardware Specialties."

This is a very handy compendium in pocket size full of useful information, together with illustrations and prices on their line of glass cutters, wall scrapers, putty knives, nail pullers, pliers, fence tools, linemen's tools, augur bits, mitre boxes, chain drills, food choppers, etc.

Copies of the catalog will be supplied on request.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

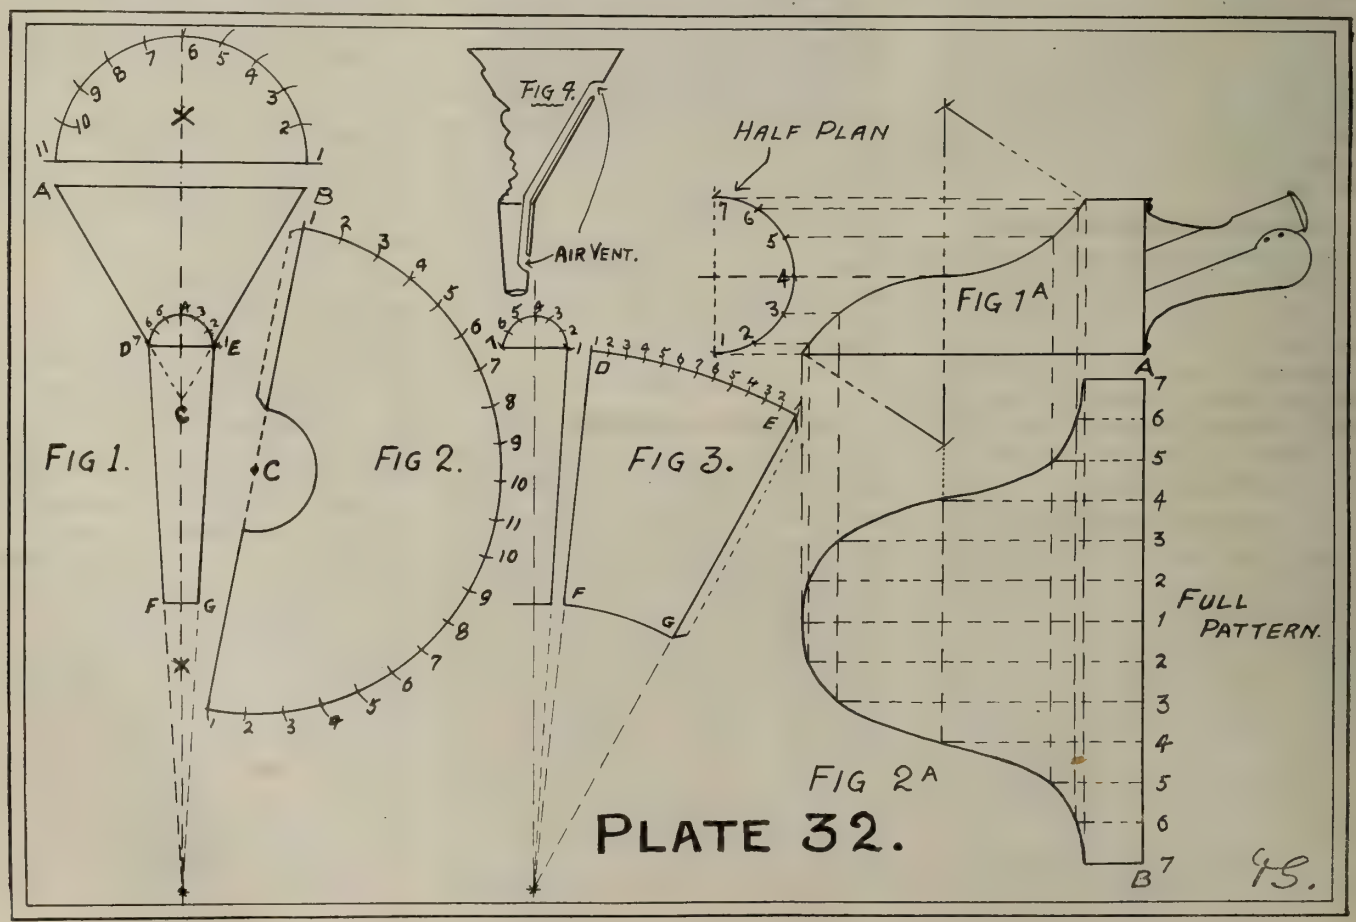
BY THOMAS STANFIELD

IN the accompanying drawing there are two articles shown which are not very often made these days. Fig. A being that of a hip bath tub, the other a kitchen colander. The developing of the patterns for both these articles will not only prove interesting, but will be splendid practice.

The first step to make in developing Fig. A will be to draw line A. B. Now determine the width and the depth of the bath required, with A B as centre. Next draw an elevation C D E F and extend the base line from E F to centre, this may be at any point on line A B until G is determined.

Now draw a half plan of the bottom with H as centre and divide same into 8 equal parts 1, 2, 3, 4, etc.

The stretchout for body is next. With B as centre open compass to K, and draw a circle; then draw another circle from F sufficiently large to allow the transferring of the measurements from the half plan, and erect perpendicular lines on half plan from 2, 3, 4, 5, 6, 7, 8 until they reach line E. F. From these points draw a number of slant lines using B as centre, and J K the top line. Wherever these slanted lines intersect the curved outline of the sides of the bath, draw a number of lines to back.



With B as centre, draw a number of circles from these points just developed; then draw lines, still using B as centre, which will cut the circles at points, 9, 8, 7, 6, 5, 3, 2, 1. Now draw a solid line with the compass, with B as centre and D as radius, from 9 to 6. Then draw another solid line through the various intersections, beginning at 1, until 6 is reached, in manner shown. This completes the half pattern for the body.

At any convenient point on line A B, as shown in Fig. 2 near A, draw an elevation of the flared bottom, and again draw a half plan, dividing in manner already described. From the centre draw two circles, using 9 and a as radius respectively, and transfer measurements 1, 2, 3, 4, 5; this will be sufficient for a quarter pattern.

Fig. 3 shows a whole pattern. The student will note that to make this pattern in one piece, a large sheet of material would be wasted, whereas by making a quarter pattern a small sheet can be utilized with very little waste. This is proven in Fig. 4.

The seaming of the flared base and bottom is described in Fig. 5. On ac-

(Continued on page 44.)

Utilizing the Wholesale Fair Idea

A Review of the Organization of the Pivotal Point of German Industry—What Britain is Doing to Oust Leipzig—An Interview With H. Kershaw

THAT the Leipzig wholesale trade fairs have made modern Germany is the statement made by H. Kershaw, the representative of the British Board of Trade, now in this country in charge of the Exhibition of Enemy Goods. Mr. Kershaw has in the past two years taken an active part in the efforts of the British Board of Trade to emulate this German fair and thus is particularly well qualified to speak on the subject.

Asked to outline the nature of the fair, Mr. Kershaw said:—"The Leipzig Fair was a wholesale trade fair, participated in by over 4,000 manufacturers. It was ostensibly open to all nations. In reality it was closed to all others than Germans and Austrians by the nature of things. Foreigners could exhibit there, but they could not compete against the German organization on prices. Thus they represented only a sprinkling of the exhibitors."

Wholesale Only

"The fair is strictly a wholesale one. Orders are given on an immense scale. The sales are made on the spot on the basis of the samples shown. The attendance before the war consisted of scores of thousands of the cream of the world's buyers. They came from all over the civilized globe. The great value of the fair lay in the fact that the manufacturers received perhaps in a few days sufficient orders to keep their plants busy for a year ahead. Thus, a highly desirable and usually abnormal condition was made to become a regular and established part of German trade."

Big Orders and Low Prices

"The obvious and logical result was that German and Austrian manufacturers were enabled to quote extremely low prices. The certainty of working at capacity for many months ahead enabled them to buy their material ahead and to take advantage of the market, to standardize their produce and to reduce overhead and other large charges, such as the upkeep of an elaborate sales organization. As the buyers who frequented the fair were a substantial class, it is presumed that the percentage of bad debts was very small.

History of the Fair

"The fair is hundreds of years old and has been identified with German commerce since its inception. It represents the essence of the German power of organization from which it sprang. It is only within the last few decades that it assumed first rate and international significance.

The Organization

"It is a combination of private and municipal enterprise. The manufacturers maintain a Fair Committee which co-operates with the municipality of Leipzig, of which city the fair itself is the chief source of wealth. A most voluminous and complete catalogue is issued which is divided into three groups which include the names of manufacturers, the trades represented, the towns and countries exhibiting, as well as a comprehensive plan and general layout of the buildings which house the exhibits.

A Fair City

"The entire city is turned over to the needs of the fair. The normal uses of entire sections are replaced by the exhibit office buildings, factories, residences, schools and other public buildings are all utilized.

All Classes of Goods Shown

"All classes of goods were shown, but the principal sales occurred in fancy goods, toys, cutlery, printing and stationery, musical instruments, glass and pottery. The trade ran into millions yearly. The fairs are held semi-annually; one, the largest, is in February, and the smaller one in September.

The Chief Industry

"Leipzig was built up to its present status by this fair. The evolution of it came partly from its own impetus. The landlords discovered that they could make as much in rent in one month of the fair as they could in twelve months in the ordinary way. So they encouraged manufacturers to come, boosted the fair all over the world, induced the railroads to offer reduced fares, and, in fact, did all the other things that are usually done to bring people together, as well as a lot of unusual things that are frequently overlooked. They were most thorough in their methods. Everything in the way of entertainment was offered the visitors. No stone was left unturned to facilitate the object of the fair.

Different Now

"The war has, of course, made a great difference to the fair, according to all reports. It has been sadly hit. Literature has been sent out to neutral countries in regard to visitors bringing their own sugar and getting bread and fat tickets. However, buyers were induced to go to Leipzig this year in spite of all difficulties and the usual reduced railroad fares went into effect from Holland and other nearby neutral countries. Apparently, the Germans mean to continue business.

What Is Being Done

"The British Industries Fair represents the British utilization of the Leipzig idea. It is, of course, a Department of Trade and Commerce affair. It is reserved exclusively for British manufacturers. The first one was held in May, 1915, the second one in February and March, 1916. The next one will be held in the latter part of February, 1917. This year's exhibit was confined to toys, games, fancy goods, printing and stationery, and china and earthenware. No manufactured products of metals were shown on account of the fact that such an exhibit would tend to further increase the demand upon an industry that is already taxed to supply munitions. A lack of space alone prevented other exhibits being shown. Hundred of applicants were turned away.

"The fair was a great success and conclusively demonstrated that it is of the greatest value to the manufacturing interests. The presence of overseas manufacturers was a notable feature of the occasion. A similar fair was held in Lyons, France, in March of last year. Another is planned for Utrecht, in Holland. Both are on the Leipzig model. The Lyons fair embraced every trade, and the Canadian manufacturers had a splendid exhibit.

The Basis of World Trade

"The greatest importance is attached to the use of these fairs in allied and neutral Europe. They will be found to occupy a most important place in the scheme of things after the war. The inauguration of or participation in them on a permanent basis constitutes, in the opinion of many, a prime necessity in the case of any nation which has aspirations for an increased trade."

E. M. Trowern, Dominion secretary, and J. A. Beaudry, Dominion treasurer of the Retail Merchants' Association, are spending a week in the Maritime Provinces. Last week they visited Halifax; on Monday, November 6, they will address a meeting in Moncton, N.B., and on Tuesday they will speak in St. John.

WEEKLY PAINT DEPARTMENT

Feature Interior Paint Lines

The "Loosening Up" of Economy Measures on the Part of the Public Will Bring a Bigger Demand—Why Not a Fall Opening?

THERE has been a comparative lull in building operations since the outbreak of the war, and this has had its effect on the sale of paint. Another factor that has made it more difficult for the paint dealer has been the tendency among people generally to economize. People have felt that at a time of such stress and uncertainty it was a matter almost of patriotic duty to save wherever possible. Men have worn their last year's overcoats cheerfully and curtailed on their weekly supply of tobacco. Women have done without servants—sometimes because they couldn't get them—and paid less attention to the dictates of Dame Fashion. And men and women have jointly agreed to economies in the household—fewer luxuries on the table, and new furniture only when dire necessity has been felt. It has followed that the tendency toward economy has to some degree at least extended to the use of interior paints and varnishes.

This, however, is not a real economy and should be discouraged. Furniture will wear longer if properly attended to and revarnished when necessary. If the expenditure of a few dollars at the hardware store for painting material will save the expenditure of, say, fifty dollars on new furniture, then the purchase of this material becomes a real economy.

It is also worth noting that the tendency at present is to "loosen up." People are not going in quite so noticeably for sackcloth and ashes. They have more money than ever before, and not even a sense of patriotic duty can keep some of it from burning the pocket. People want comfort, and it is not at all likely that the thrift campaign still being urged so energetically will have much effect on the sale of interior paints and varnishes this year. In fact, the tendency to economize noticed before should accelerate sales from now on. Necessary work neglected in the past means increased demand in the future.

Hardwaremen should pay special attention to interior lines from now on. As the winter season is practically here, the demand for outside paints will drop off very materially, and whatever business is done will be in the interior lines.

Why not make a sort of fall and winter opening? Get these lines to the front, feature them up with some attractive cards, put in a window display, talk inside painting to your customers, and advertise in the papers. This would help very considerably. It would get customers thinking that winter means confinement to the house with resultant wear and tear, and also with a greater necessity for making everything inside comfortable, cheerful and attractive. Even if it is not felt that so ambitious a start of the season could be made, the dealer should see to it that special efforts are undertaken.

It is not often that hardwaremen who make a special success of some one line can attribute their success to anything novel in their methods. They have simply "concentrated" on that particular line—talked it to customers, made sure that they carried a good stock, studied it thoroughly and come to understand the goods. It is in this way that a big volume of business is created.

Well, then, why not "concentrate" on interior lines of paints and varnishes?

Russia's Chemical and Paint Industry

INTEREST is slowly awakening in everything pertaining to Russia, particularly with reference to Russian trade, as it is realized that after the war Russian trade will be a big factor in any Canadian export campaign. Consequently the following article on the chemical industry of the land of the Czar, which includes varnishes, drugs, oils, etc., will be of practical interest.

Trade of Russia

The Russian chemical industry is merely in its infancy and hardly more than two decades old, as far as the home production is concerned. It is one of the oldest and yet youngest of Russian industries. It is old, because the Russians produced their chemicals and drugs, perfumes and dyes when the rest of Europe was plunged in barbarism; it is young in the modern industrial sense and dates back only to the middle of the past century. As Russia differs from the rest of the world socially, artistically and politically, likewise she differs in her chemical industry and trade from anything known on this side of the ocean.

The outside world has been accustomed to consider Russia as backward, uncivilized and frozen, while in reality Russia is a continent or world by itself. I have found most of the statistical figures on Russian commercial, economic and artistic life fundamentally wrong. The people here do not know that the "Kupechestwo," the merchant class of Russia, is older perhaps than the German "Hansa," or the English "Lloyd," as it dates back to the fifteenth century. The "Kalashnikoffs," "Kulikoffs" and "Poppoffs" were historic figures in opening trade channels into the Orient. Tibet, Persia, China, Japan and for two centuries before the other European countries knew anything of them. For many centuries the Russian merchants were the only middlemen between the Oriental and the Occidental markets. The Nijny-Novgorod Fair is, and remains, one of the most picturesque potential factors in European mercantile history.

The Russian statisticians limit the chemical industry to a rather narrow field. The Russians do not classify under the chemical industry the production and sale of vaseline, paraffine, mineral oil, cement, soap, varnish, glue, explosives, starch, turpentine, glycerine, glucose, sugar, herbs, oils, and tanning substances. Under the word chemical industry the Russians mean merely the industry of pure chemicals, drugs, coal-tar products and perfumes.

If we should count the Russian production of linseed, sunflowerseed, hemp, mustard and other vegetable oils as chemical industry, the field would be

rather large. Russia has also a large glue production, gelatine and glycerine trade which does not belong to the group of our subject.

It is estimated that the Russian production of various oils, glue, inks and varnishes amounts to half a billion roubles annually, if not more.

Until the war the Germans practically controlled the Russian chemical trade in a way. They dominated the market of the aniline dyes, of drugs, of certain perfumes and pure chemicals. The Germans controlled all the Russian chemical imports.

It is estimated that the Russian chemical industry in 1913 amounted to 200,000,000 roubles, 50 per cent. of which were imported. Drugs to an amount of 25,000,000 roubles annually. But numerous Russian chemicals were imported either as general merchandise or as by-products of some other industry. Thus Russia manufactured a large quantity of sulphuric and hydrochloric acids and chemicals connected with these in 1913—400,000,000 pounds of sulphuric acid of 66 per cent. B., which sold at about one cent per pound in the factories in the Caucasus and Moscow, and hydrochloric acid of 20 per cent. B. was about the same. The Russian production of liquid glass varied between 900,000 and 1,500,000 pounds.

In 1913 Russia produced some 2,000,000 pounds of copper vitrol, some 20,000,000 pounds of metallic colors and half a million roubles worth of various metallic oxides. However, all these chemicals never played any large role, and there are no records of its extent.

Russia has been a large consumer of the coal-tar dyes, and these came mostly from Germany. There were only two native concerns in Riga that manufactured aniline dyes, but their production hardly reached to supply but 25 per cent. of what the country consumed annually. As Russia has such a vast textile industry of cotton, linen, silk, and wool goods the annual consumption of aniline dyes, alizarine, artificial indigo and logwood extract reaches 25,000,000 roubles.

PRACTICAL SHEET METAL WORK

(Continued from page 40.)

count of the fact that the whole weight of a person's body is placed on the bottom of the bath, it is advisable to reinforce the bottom by fastening a piece of wood underneath as shown, the wood being attached with screws through the side of the flared edge. The wood should be carefully fitted so as to take all strain from the metal bottom.

All hip baths have to be tubed-edged with a tube of at least 1½ ins. The fastening on of rim is a work of art, particularly if brass tube is used. If lead waste pipe is used—and it often is—it can be formed, first, with a bending spring, then slotted with a saw, fitted on in either manner as is described in Fig. 6, X Y or Z. To develop patterns for Fig. B is very much a repetition of the method adopted in the former article; but the reason it is given is chiefly to show the student how the holes are laid out for such an article. The writer was once asked to make up a steel die and punches which would stamp out this piece and punch the holes neatly in one operation, and the method described, all of which is done by properly laying out the half plan of the bottom.

It will be seen that this is divided into ten equal parts; then, again, divided in the stretchout circular piece. Of course, it will be seen that only half pattern is shown, as well as half the pattern for the flared bottom. The perforated bottom is simply a flat sheet with the holes laid out in the same manner as is described in the pattern of side.

(Continued in next issue.)

WEEKLY PAINT MARKETS

(Continued from page 46.)

modity. On Wednesday of last week flax seed closed on the Winnipeg market at $2.48¾ per bushel. On Wednesday of the present week it closed at $2.56. On Thursday at 12 o'clock it went up to $2.60½. In the face of this advancing market some of the dealers withdrew their prices temporarily in order to see where the market was going to settle. The demand for linseed oil has been fairly good even in the face of the high prices. Linseed oil cake continues to be in good sale at $45 to $48 per ton. In the face of the present condition of the seed market advances in linseed oil are not improbable. In view of the flax seed situation, prices have firmed, and are now quoted as follows:

	Raw.	Boiled.
1 to 2 barrels	$1.12-1.15	$1.15-1.18

3 to 5 barrels, 1c under 1 to 2-barrel lots, for both raw and boiled; 6 to 9 barrels, 2c under 1 to 2-barrel lots.

White Lead Is Still In Firm Market

WHITE LEAD. — Although there have been no advances in white lead during the week, the market is holding quite firm at recent quotations of $14.25 in small lots and $13.95 per 100 pounds in ton lots. The pig lead market in New York was slightly easier in tone on Wednesday, but not sufficient degree to affect the price of the corroded lead.

Turpentine Advanced; Firm in Primary Market

TURPENTINE.—Locally turpentine prices advanced from 1½c to 2c per gallon during the week. The firmness in price is caused by reason of the situation in the primary market in the Southern United States, where prices have been quoted as high as 46¾c to 47c during the week. There was a good demand for the article at primary points. There has been a heavy foreign movement of the product, and big shipments will also be made during the next thirty days. New uses have been found for turpentine in certain quarters. Certain mining interests who have used pine oil in their various processes are now finding they can use turpentine to advantage. It is expected a still wider use in this respect may come as the result of experiments that have been carried on. Following is the local range of prices:

	Per Imp. gal.
1-barrel lots	69c-74c
2 to 5 barrels	67½c-73c
6 to 9 barrels	66c ..
5-gallon	74c-81c

Better Grades of Gasoline Very Firm

GASOLINE.—The higher grades of gasoline used by rubber manufacturers continue to be scarce. This has given a firmness to the market for this particular product. In the ordinary high-grade motor gasoline the market is steady at recent quotations of 26½c per gallon. Inclement weather that has been conducive to cold and other ills during the past week or ten days, has helped curtail the consumption. Just at the present time there is a sort of between-season demand. People are getting their cars in shape after their summer's use and preparing for winter use later on. Benzine is quoted at 25½c.

Mixed Paints Are Firm

MIXED PAINTS.—The market continues firm and higher prices are almost inevitable unless costs of raw materials decline.

Advances in Glass Not Yet Recorded

GLASS.—Local glass dealers have not yet received an intimation of advanced prices in glass, although they state they are confidently expecting to hear from the American manufacturers to this effect in the near future. The result of the Presidential election in the United States is stated to be a factor that might operate to change prices, as well as the increased labor cost which manufacturers will have to pay to their glass blowers this year.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Nov. 9.—Turpentine showed a stronger tendency on the market this week, and linseed oil while firm to the paint trade was reduced in price a shade in the hardware trade which had last week raised the price above the paint trade prices. Linseed oil is still exceptionally firm.

Business is Not Sought in Linseed

LINSEED OIL.—Although there has been nothing in the nature of reassuring news from either the Argentine or the North West as regards the crops or progress with threshing, the price of linseed oil has not advanced beyond last week's figures. In fact the hardware jobbers in linseed oil noted a reduction from last week's quotations, of five cents per gallon, bringing the hardware trade's prices down to the figures quoted generally by the paint trade namely:

Linseed oil	Raw	Boiled
1 to 4 bbls...	$1.10-$1.13	$1.12½-$1.16
5 to 9 bbls...	$1.10-$1.11	$1.12½-$1.14

White Lead in Oil Remains Very Firm

WHITE LEAD IN OIL.—Quietness prevails in the market for white lead in oil. Prices are still unchanged in spite of the great increase in the cost of the oil, and in spite of the very marked firmness in the metal. Considerable business is being done in this product, and one large firm reports an order for 300 tons of white lead in oil for South America. The demand for Canadian paints and paint products in the South American Republics is developing in very gratifying manner, and it is said that firms going after this business are finding it increasingly profitable. Canadian demand is also on the increase, Montreal firms being exceptionally busy at present with orders for shipment previous to close of navigation on the St. Lawrence. Prices quoted in Montreal are $13.80 for 1 ton lots, and $14.10 for smaller orders.

Turpentine Is In A Firmer Market

TURPENTINE.—A firmer tendency was noticed in turpentine this week, turpentine being in fact one ingredient of paint manufacture which appeared in more active market during a period of quiescence as regards the other materials. The firming tendency appeared to take its origin in the primary markets, and the effect in Montreal was to raise prices for turpentine per gallon from one to three cents as compared with last week's quotations. Firms quoting prices did not adhere to any one standard, quotations varying from 70 cents (which was the highest quotation last week,) to 73 cents per gallon in 1 barrel lots. Following is the range of prices:

Turpentine	Per Imp Gal.
1 bbl. lots	70c to 73c
2 to 4 bbls.	69c to 72c
5 to 10 bbl	68c to 71c

Turpentine was said to be a little harder to obtain at satisfactory prices at the primary markets, but no shortage was suspected.

Indications Point To High Paint Price

MIXED PAINTS. — Undoubtedly there is a possibility that prices of mixed paints may go higher before spring. They may even go higher for spring bookings though orders for spring supplies are already being booked up. Whether all paint manufacturers are prepared to agree to an increase or not is quite a question, for there are several strong firms whose heads are expressedly opposed to further increase of paint prices on the ground that demand is likely to be seriously retarded and reduced by any rise in cost of paint to the paint using public. At the same time the materials used in paint making are in firmer market—especially zinc and lead. Dry colors are no easier to obtain, and certainly no cheaper than they have been for months. Linseed oil is apparently in for a long period of exalted price standards due to a real deficiency of supply, and turpentine is this week firming for what may be a lasting increase in price. The conditions are such to-day that paint manufacturers are frankly declaring themselves unwilling to contemplate the manufacture of any very large stocks of paints at present prices of raw materials, and they are figuring tentatively on the cost of production at present prices as contrasted with the selling prices maintaining at present for the product. While a majority of representative paint manufacturers in Montreal indicated reluctance to encourage a further advance in prices all admitted that a rise in prices has been "thought of, if not yet considered." But one manufacturer positively declared that not only had he thought of a possible rise in price, but he declared emphatically that a rise is due, and must take place before spring bookings go much farther if supplies for spring are to be manufactured from the raw materials offering at such prices as now prevail. As a matter of incidental fact, a small advance in prices of one firm's specialty lines of paints has taken place to the hardware trade. The rise takes the form of a reduction in discount on list price from 35 per cent. to 30 per cent. The lines to which this applies are art enamel, aluminum paint, perfection gold paint, union gold paint, and Campbells' varnish stain.

TORONTO

TORONTO, Nov. 10.—Business in all paint lines has been seasonably good during the past week. The volume of sales is up to that of last year, but of course, the actual amount consumed would be smaller owing to the increased prices now paid for all paint commodities. Turpentine advanced during the week, and there was a generally firming tendency in the linseed oil market, due to the soaring of flax seed. Some of the dealers at the time of going to press had withdrawn quotations until they had a chance to see where the present flurry in flax seed is going to end. Glass continues to go out in good quantities. Gasoline holds steady at recent quotations, with a scarcity in the higher grades used by rubber manufacturers reported.

Linseed Oil In Very Firm Market

LINSEED OIL.—There is a firmness in the linseed oil market, due to the higher price of flax seed and the tendency to still higher prices for that com-

Concerning a Product of

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

Good Paint manufactured to-day by the latest scientific processes of Brandram-Henderson, Limited, represents the manufacturer's unattainable ideal of less than a generation ago.

With the machines and methods of that time, it was impossible to grind ingredients to the microscopic fineness attained in the present B.-H. processes. Consequently, covering power, penetration and durability were limited.

Wonderful improvements in manufacturing processes, and the perfection of the distinctive B.-H. formula:—

70% Pure White Lead
30% Pure White Zinc
100% Pure Paint

have combined to produce a paint that resists the constant attacks of the elements almost as though it were a film of steel.

Pure paint in the truest sense of the word is produced from the B.-H. formula, and it is paint that works under the brush with a facility beyond comparison.

This quality of wear enables B.-H. paint to keep the unusual brilliance of original color imparted at the Brandram-Henderson factory, and both these qualities of durable color and lasting wear make B-H paint easy to sell, and attract agents who wish to handle only the best.

If interested, tear out this page and keep with letters to be answered.

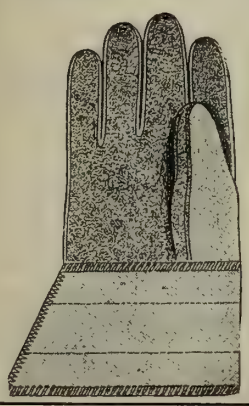
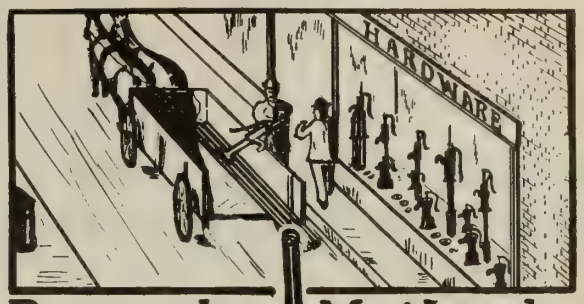
Gerrard St. and Carlaw Ave., Toronto, Ontario



Cotton Gloves for furnace work

Right now our Cotton Gloves are in great demand. You can sell two or three pairs at a time to each customer, so low-priced and desirable are they; every pair sold makes a friend for all the

TAPATCO REGISTERED BRAND TRADE MARK



Line of Cotton Gloves

These come in many styles—Gauntlet, knit wrist or band top; in heavy, medium or light weights; also leather tip, and leather face; and jersey gloves and mitts, in tan, slate, or oxford. The Tapatco Line has no real rival. These gloves meet a common need at a price everybody likes.

Order from your jobber.

THE AMERICAN PAD & TEXTILE CO.
CHATHAM, ONT.

Beat the Mail-order

No mail order house can compete with you on pumps if you handle the BT Ready-to-ship line.

It is a low-priced line—because there are only 7 pumps, and these are made in quantities of thousands. The more we make, the less they cost. You can compete in price with the catalog houses. At the same time you can offer better pumps. This line is the best well pump line ever made. Everyone who has seen the pumps or sold or used them says so. The extraordinary value is apparent to any customer. The mail-order proposition looks feeble by comparison.

This line is not sold to catalog houses, but only to hardware and pump dealers. It is built purposely for the trade, and sold only to the trade.

It is a line you will be enthusiastic over once you try it. The pumps have a multitude of talking points. Spouts, for instance, are large and waterways are large, so that the pump will throw a large volume of water. No. 5 of the line, the stock pump, will throw more water than any wood pump.

Send for our new pump catalog and order from us direct, or through our salesmen.

Beatty Bros. Limited
Head Office Fergus Ont.

There is a lot of Satisfaction in selling Goods that you know are Right

In selling any kind of goods, there is a lot of satisfaction in knowing and being able to tell your customers that a particular article will meet the requirements fully. This particularly applies to varnishes, because it is impossible to tell how they will wear until they have been applied.

"Scarnot," "Marnot" and "Rexpar" Varnishes

are the kind that you can confidently recommend to your most particular trade as being the best varnishes that can be made for their particular purposes, and are unconditionally guaranteed.

Ask us for particulars of the S-W Agency.

26 gauge	4 15	4 00
28 gauge	4 25	4 00

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

MARTIN-SENOUR
PAINTS AND VARNISHES

(Made in Canada—Sold on Merit)

PIONEERS
of
PURE PAINT

and STILL FIRST in the estimation of PAINT USERS

If your paint department is to be a success the first essential point is the quality of your line. Sell good paint or none at all. You can expend a vast amount of energy in this branch of your business, but if your paint is not of the right standard, your efforts are wasted.

MARTIN-SENOUR 100% Pure Guarantee Protects the Dealer Agent as Well as the Customer.

The Exclusive Agency for Martin-Senour Paints and Varnishes will give to your Store the reputation of being the place to procure goods which are unsurpassed for Quality.

Next to this it is most important that the line you carry is known to paint users.

Martin-Senour Paints and Varnishes have been brought to the attention of paint users by a more comprehensive campaign through various mediums of the press, interior and exterior displays, mailing campaigns, follow-up systems, etc., than has ever been attempted by a paint company in Canada. The result has been increased sales to the dealer agents.

This policy will be continued and extended during the coming season — connect your paint department with it.

An increase in your Paint sales for 1917 will be doubly assured if you secure the Exclusive Agency for this line of Goods in your community.

No better time than now to get details of our profitable Proposition.

Drop us a line to-day.

The Allan Munro Color Co., Limited, Montreal

The popularity of your store depends mostly on the stock you carry. Talking of Paint, there is no better seller than Ramsay's and every can is a can of satisfaction. Since 1842 Ramsay's Paints and Varnishes have been made right and have proved their ability to stay right. Color and quality are fixed. Ramsay's complete line "is" complete, and that's the line of paint for you to carry if you would make yours the most popular store in town.

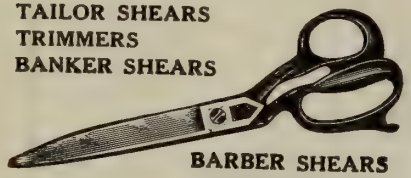
COSTS LESS
than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.



Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

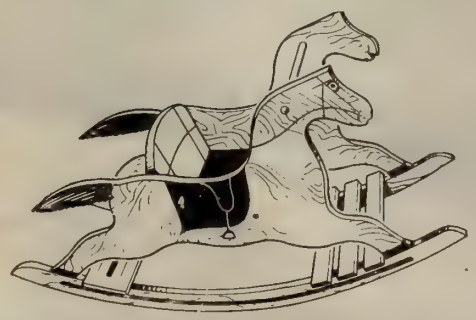
IF CAR IS RIGHT ADVERTISING PAYS

This is the Experience of John N. Willys, Who Plans Biggest Campaign.



"This year, as heretofore, we shall continue our liberal advertising programme in national publications, farm and trade papers, and we will also conduct a larger newspaper campaign than ever in the past," declared John N. Willys, head of the great Willys-Overland Company, of Toledo, in answer to a question concerning his future advertising plans. "We find our various models of cars even more attractive than ever before; careful and shrewd buying has fortified us against any possible shortage of materials; the country is enjoying an unprecedented wave of thrift and prosperity, and our factory facilities, including new buildings and equipment, are sufficient to warrant an output of 300,000 cars for the year.

"Advertising is just as essential in the modern manufacturing business as is the factory in which the product is turned out," concluded Mr. Willys. "If you are building a product of real worth and merit, it is obvious that you should inform the public of that fact and thus build up a market for your product. The man who has something worth while to sell and does not advertise that fact is hiding his light under the proverbial bushel and, nine times out of ten, he gets nowhere.

"When I authorize an advertising appropriation I first make myself absolutely certain that the models of cars which we are producing are worth talking about. I want to be sure that we have something in which every reader of advertising will be especially interested. Then, too, one must take into consideration the general conditions existing as to availability of material markets, general tone of prosperity throughout the country—because if the people haven't money there is no use in trying to sell them automobiles—and also consider our factory conditions relative to the size of the output which we can safely figure on turning out."

If you have a business to dispose of, or are in need of efficient help, try a Want Ad. in Hardware and Metal, and let it assist you in filling your needs.

Shoo-Fly Rocker— A Big Profit Proposition

We present extra value in these Shoo-Fly Rockers. They are hand finished in Dapple Gray in contrast to the regular machine finish in burl-walnut. Bridles, saddles and trimmings are handsomely painted in bright colors.

The beauty invites purchases, and then strength and service gives the utmost in satisfaction.

The Schultz Brothers Co., Limited

Can You Analyze A Brush?

Can you demonstrate a brush thoroughly and intelligently to a buyer? Can your salesmen? Do you and they know the perfection standards in bristles—their varieties—their adaptability for specific purposes—their shaping and their lengths? What about the binding of the bristles by ferrule or twine, or metal strip What about handles? their shape, weight, length, finish and balance? You will find the perfection of brush making in

MEAKINS BRUSHES

and you will get answers to many questions in our catalogue. The catalogue will inform you about brushes that you may not know are made. The more you know about brushes the more brushes you can sell—and the same thing in time about your salesmen.

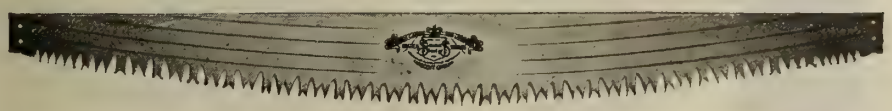
Having our catalogue enables you to make many extra brush sales. Send for it.

BIG MARKET FOR BRUSHES

Will you let us say to you that there is a much larger market in every community than is generally perceived. We make a hundred or more different kinds and for example there are:

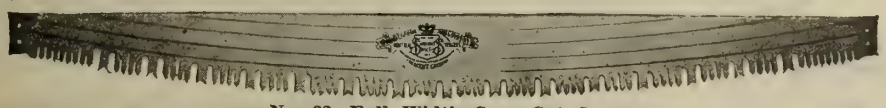
Meakins Brushes for Horse Stables and Carriage Cleaning.
" " " Garage and Automobile needs.
" " " Butchers, Barmen and Stovemakers.
" " " Walls, Radiators, Floors, Bannisters and Cornices.
" " " Kitchens, Parlors and Schools.
" " " Cream Separators, Gun Barrels and Bottles.

We do not suggest that you carry stocks or even samples of every variety of brush, but we do suggest that you have our catalogue, and familiarize yourself with our various brushes in order to be able to suggest the right brush to the right person for the right need.



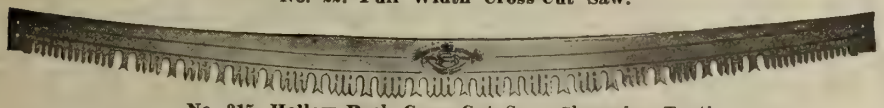
Sell from our catalogue.

Just a last word: **MEAKINS BRUSHES** are **GOOD** brushes and our catalogue will tell you why. Our catalogue is valuable. Have you a copy?

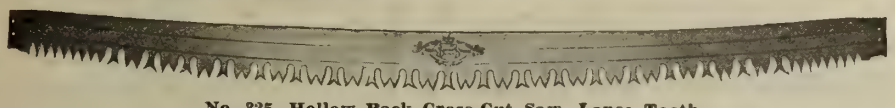


Meakins & Sons, Limited, Hamilton, Ontario

Warehouses: Winnipeg, London, Toronto, Montreal



You should place your orders now for a stock of SIMONDS Crescent Ground Cross-Cut Saws



No. 13. Full Width Cross-Cut Saw.

No. 22. Full Width Cross-Cut Saw.

No. 315. Hollow Back Cross-Cut Saw, Champion Tooth.

No. 325. Hollow Back Cross-Cut Saw, Lance Tooth.

YOU can make no mistake when you do this as every logger or woodsman knows this make of saws and will always pay more for them for the simple reason that they enable him to do more work with a smaller amount of labor. He knows the better cutting quality of the saw will make it more than pay for itself. Select the styles you want from these pictures or write for our complete catalog and more information.

We also have a complete line of Hand Saws.

Place orders through your hardware wholesaler.

KINDLY MENTION THIS PAPER WHEN ANSWERING ADVERTISEMENTS

If interested, tear out this page and keep with letters to be answered.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

MANUFACTURERS' AGENT IN CANADA desires Canadian rights on small article to sell through display advertising. Correspondence and catalogues solicited. Frank R. Burgess, 407 Hope Chambers, Ottawa, Canada.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

HARDWARE WINDOW DRESSING—THIS is the first book ever written devoted exclusively to Hardware Display. There are 256 pages and over 200 illustrations with full working descriptions. It is the purpose of this book to illustrate and explain how hardware windows may be dressed to the best advantage—how they can be made to sell goods. It is not a theoretical work but a collection of specimens of the best work and ideas of the most expert window dressers in the world. These men have contributed their experience covering the many phases of hardware window display. This volume, therefore, represents the sum total of information on this subject presented as concisely as is consistent with clearness. By following the simple illustrated directions given in "Hardware Window Dressing" any clever clerk can put in good hardware displays at no cost whatever. Size 8 x 11 inches. Price $2.60 postpaid. MacLean Pub. Co., 143 University Ave., Toronto.

WANTED — AN EXPERIENCED HARDware clerk. Apply, stating experience, wages expected, also give references, to Box 270, Orillia, Ont. (45)

WANTED — AN ALERT TRAVELLING salesman with hardware connections in Province of New Brunswick, to represent a large Canadian paint and varnish manufacturer. Apply to Sales Manager, P.O. Box 429, Montreal. (45)

SITUATIONS VACANT

WANTED—TWO LOCK AND HARDWARE travelling salesmen by a prominent Manufacturer. One to cover Eastern and the other Western Canada. Experience in the sales of both stock and contract builders' hardware necessary Address X. Y. Z., Box 404, Hardware and Metal. (45)

BUSINESS CHANCES

$15000 — HARDWARE — ONE OF THE best in western Ontario; splendid stand; large town; owner up in years, retiring. John New.

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

Stopping an advertisement to save money is like stopping a clock to save time. Advertising is an insurance policy against forgetfulness—it compels people to think of you.

Sell Hearth Furniture

Economy This Winter

The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

CANADA Dustless Ash Sifter

(See illustration)

Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.

Jobbers everywhere supply them; order through them.

"What ruined your business?"

"Advertising."

"How?"

"I let it all be done by my competitors."

—Boston Transcript

A Straight Talk from the Manager

No. 50

"I don't know why I ever stopped subscribing to HARDWARE AND METAL," says an ex-hardwareman who has been in the real estate business for the past six years.

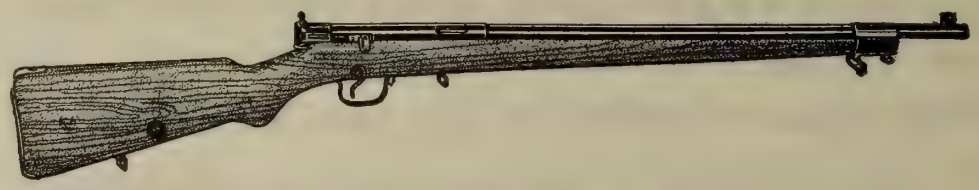
"I am thinking of getting back into hardware again, so you may enter my subscription.

"I have always had a warm spot in my heart for HARDWARE AND METAL, because I made a lot of money through it.

"The best deal I ever made was the result of a prediction in HARDWARE AND METAL, that the price of pig-iron would advance shortly.

"I immediately placed a big order for stoves with one of HARDWARE AND METAL'S advertisers, just in time to take advantage of a heavy increase in the price of stoves.

"I could tell you of many other profitable deals that HARDWARE AND METAL helped me to make, but, this was the best one."



J.G.L.

Ross Rifles Sell Well Now

To the sportsman who is looking for the best you can confidently recommend the Ross .280 High Velocity. Its power, accuracy and reliability have earned it a world-wide reputation among big game hunters.

To the man who wants a slightly less powerful, and therefore less expensive priced rifle, you can point with pride to your stock of Ross .303 Models. These finely finished rifles and all other Ross Rifles are made in Canada throughout and possess great accuracy and reliability.

For the youngsters the Ross .22 Cadet is the ideal weapon. It excels either on camp or trail or as a target rifle. It is the official arm for Canadian Cadet Corps and is an accurate, safe and thoroughly reliable weapon.

THE MACLEAN PUBLISHING COMPANY, LIMITED

PUBLICATION OFFICE: TORONTO, CANADA

Do You Believe In Featuring Well-Advertised Goods of High Quality?

The well-known trademark that directs trade to the store that features it.

If so, you should be interested in the Martin-Senour exclusive agency proposition.

MARTIN-SENOUR
PAINTS AND VARNISHES
(MADE IN CANADA—SOLD ON MERIT)

through our widespread advertising campaign throughout Canada, are to-day better known and more in demand than any other line. Martin-Senour dealer-agents reap the benefit of this forcible advertising. The public are attracted to the store showing the familiar trade-mark, and the result is an increase, not only in the sales of paint, but of many other lines as well.

The Martin-Senour exclusive dealer-agency proposition offers the most advantages. A line of 100% pure, guaranteed paint and varnishes, a complete line of products each guaranteed to best serve the purpose for which it is made—a line that is well and consistently advertised and a line that carries with it more sales co-operation than has ever been attempted.

Surely this is the line for you—write for complete details.

TRADE **SIMPLEX** MARK

BIG CURVED HEAD—ONE-PIECE

ROOFING NAILS

Large Head—
Will Not Tear Roofing

Small Stem—
Will Not Tear Roof Boards

One Piece—
(Not Two Pieces)

ALL IN ONE

Enlarged Cut
Head, 1 inch Diameter: 21 Gauge Thick
Nail, 1 inch Long, 15 Gauge Diameter

Have a Heavy Steel Head one inch in Diameter, Cupped Shape so as to give a Head Bearing equal to its Full Diameter.

The Small Stem is one inch Long and Barbed to insure Greatest Holding Power.

Time Savers Roof Savers Money Savers

Simplex Nails have a head *four times* as large as the ordinary large head nail, and give a bearing on the roof all around its rim. The edge of the head does not bend up away from the roofing as do Tin Caps used with ordinary roofing nails.

Being in *One-Piece*, they are more quickly driven than where separate caps and nails are used.

They cannot leak as do roofing caps where the nail goes through. And being in One-Piece, they will not tear loose as do Tin Caps from the nail under wind strain.

The Heavy Convex Shaped Head will not rust out like tin Caps.

They are More Quickly Driven, Give Better Results, Last Much Longer, Keep Roofs in Better Condition than Tin Caps and Nails

TRY THIS NAIL—ORDER NOW

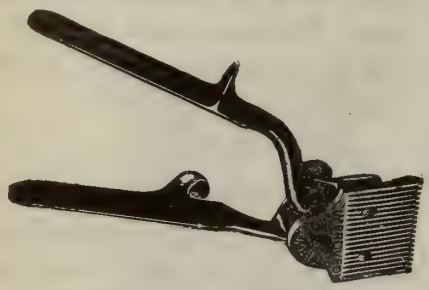
PRIEST'S HORSE and TOILET CLIPPERS

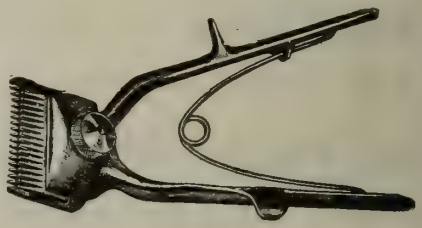
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



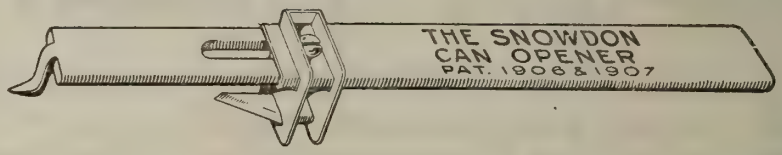
STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.



If you are not familiar with these goods, send for samples and compare them with others.

Pocket Ben

A *Westclox* Watch

CAN you say Pocket Ben, or see that brown covered box, with the white corner edge and orange lettering, without thinking Big Ben?

Is it any wonder Pocket Ben has profited by Big Ben's six years of national advertising?

Is it any wonder that Pocket Ben has more business than he can handle comfortably?

He's on the job every minute making up every bit of material he can get his hands on, doing his best to supply his loyal friends.

Pocket Ben is well designed and finely finished. The case is nicely rounded and well-proportioned; the dial, clear and distinct.

He has the same style, light running, reliable movement that makes *Westclox* so successful.

Each dozen is packed in a carton with two display cards and a novel display stand for your window or show case.

With an order for three dozen, at your request, we send a handsome walnut display rack shown above, a very attractive fixture.

There's a good margin of profit in Pocket Ben. The box and selling helps create a good demand.

Is it any wonder they sell faster than we can make them?

Furnished in nickel or gunmetal.

Western Clock Co.

La Salle, Ill., U.S.A. Makers of *Westclox*

Toronto office, 58-64 Wellington St. W.

DAVIDSON'S "STERLING" ASH SIFTER

"Special Features"

It separates the ashes from the Cinders quickly and efficiently.

It does the work without making any dust.

It is easy to operate. By turning the handle the ashes fall through to receptacle beneath, and cinders are automatically discharged into the coal hod.

It is made of galvanized steel and will not rust, while there is nothing to get out of order.

THE THOS. DAVIDSON MFG. CO., LIMITED

TORONTO MONTREAL WINNIPEG

You can put a stop to faulty hot water systems by installing

The Knickerbocker Generator

It is a positive remedy that is easily applied to the open or closed systems of hot water heating.
Entirely automatic.
Connects with one-inch nipple to outlet of expansion tank.
Makes a hot water system equivalent to a low pressure steam plant.
Increases radiation from 25 to 30% with same firing.
Reduces the size of pipes and fittings.
Temperature of water can be varied up to 250 degrees.

A top-notch profit producer.

Particulars on request.

NOTE: Above prices as figured under the several Tables indicated are for 100 feet of 3-strand Plymouth Manila Rope.
For variations such as 4-strand Rope and for Lariat use a Table sufficiently higher to cover the advance over basis.

THESE FIGURES APPLY TO PLYMOUTH ROPE ONLY. DO NOT ATTEMPT TO USE THEM FOR ANY OTHER ROPE

The above statement is typical of the comments we are getting daily from the hundreds of dealers already using the schedule—shown here—for retailing Plymouth Rope *by the foot.*

Here are a few more:

"Fills a long felt want."
"The greatest dealer aid put out in a long, long time."
"Very much simplifies rope selling."
"Are getting a more satisfactory profit by using this method."

This schedule (furnished on 8" x 10" card with instruction sheet attached) enables you to offer promptly on any size and length of Plymouth Rope a definite quotation *which will be more attractive to the customer than quotations on cheap rope and still allow you an extra good profit.*

If you retail Plymouth Rope and wish to take advantage of this new selling plan, advise us at once ON THE COUPON BELOW, or by letter or postal, GIVING SIMILAR INFORMATION.

Quality Service

Courtesy in Business

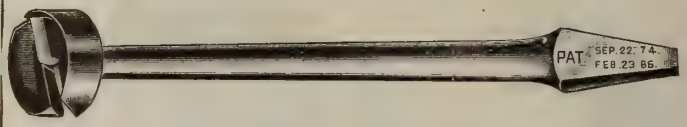
Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.



The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

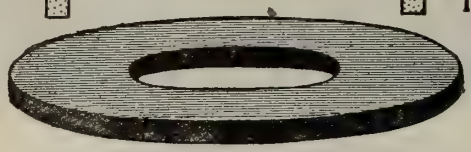
An extra strong, serviceable Wheelbarrow

for heavy hauling and hard service

Easy Running Light—Durable

When loaded and raised for wheeling the load is well balanced over the wheel and requires little effort in lifting, so that almost the entire exertion is utilized for moving the loaded barrow forward. The legs are framed on the truss principle and are bound by wrought iron shoes, so that nothing can become loosened by hard usage such as slipping over rough surfaces. The box is of good sound stock, the frame is oak, and the shoes and braces are wrought iron. The wheel is of steel.



Principally designed for the use of contractors. **Easy to sell. A sure satisfaction-giver.**

Boosting Your Business

That's the object back of all our advertising. We aim to create a demand in your territory for our products and to satisfy that demand by selling through **you**. That we are succeeding is amply proved by the number of letters we get from our dealers telling us how our advertising has boosted their business—increased the trade of their regular customers and brought them many new ones. If you don't stock Griffith Specialties, get aboard the "band wagon" quickly.

LIBERAL PROFITS

You are well protected on the retail prices of the Griffith line. A liberal margin on each specialty ensures profitable sales.

The success of your business is measured by your profits, and that is why you should handle a line which gives you a good profit and is easily sold, such as the Griffith Specialties. Any of this line respond like magic to a little extra selling effort. It will pay you to push them.

The Giant, Classic and Broncho Buster Halters are three strong sellers. You'll go a long way before you beat them. Send us a card by the next mail, asking for complete catalogue and Dealer's Price List.

Griffith's Broncho Buster

$2.00 & up

Here's the champion Western Halter. The victor of many a stubborn contest with notoriously bad bronchos. It never fails to hold them and stands up under the roughest usage. Have you got a wild one that is always causing trouble? The Broncho Buster Halter will tame him.

This halter is made of double harness leather with rawhide interlining and sewn with waxed thread. Extra heavy electric-welded steel fittings are used. This gives the Broncho Buster the utmost in strength and the wearing qualities of iron. Our booklet—"What's New for the Stable?" is FREE. Write for it TO-DAY.

Winning the Buyer's Favor

The best possible buyer is not made an actual buyer at a single step.

It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising.

Under ordinary conditions it should not be expected to do more.

The Great Advantage of EASYON TIRE CHAINS

The great advantage of EASYON CHAINS lies in the fact that they can be applied and removed so easily even after one gets stuck in the mud.

EASYON CHAINS are just the thing for use with non-skid tires to give the extra grip on the road that is needed when running in deep mud and snow or on ice. They also make a very neat, light and convenient non-skid for front wheels to prevent side-slipping.

EASYON CHAINS wear longer than others, they cost less, and it is much easier and less expensive to renew the cross chains.

There's big money in selling them and sure satisfaction behind them.

It requires only a small investment to carry a stock of EASYON CHAINS and get the chain business of your automobile owning customers.

EASYON CHAINS are especially convenient for dealers, because with a stock of only three sizes the dealer can fit all sizes of tires.

EASYON CHAINS are packed a set of 8 in a bag, four for each rear wheel, enough to give a good grip on any road.

Size	3½	fits	3"	or	3½"	tires.	Retails at $2.40 per set.
"	4½	"	4"	"	4½"	"	" " 3.20 "

EVEREADY

The light that says "There it is!"

Now Comes Christmas!

THE Big Drive and the $3,000 Prize Contest for a better name than flashlight, paved the way—they made EVEREADY lights known everywhere—they taught new uses, new advantages—they emphasized the safety and emergency value of EVEREADY lights.

And now, before Contest interest has a chance to slacken, along comes Christmas—when young and old are racking their brains for an answer to the question: "What shall I give?"

But we are not leaving it to the Contest interest to carry folks along to holiday shopping. We are doubling that interest by launching a big, new Christmas advertising campaign.

The great national magazines are again lining up the millions to tell them that 50,000 EVEREADY DEALERS stand ready to supply Santa Claus—and all this action comes piling on top of the Contest struggle. It's going to be an EVEREADY CHRISTMAS running on "high."

ARE YOU GOING TO BE AN EVEREADY SANTA CLAUS IN YOUR CITY?

* * *

Every Eveready dealer should preserve the Big Drive window cutout, for we are going to send a corking Christmas card to fit the bull's eye.

CANADA SALES COMPANY

165 Church Street, Toronto

SOOTLESS SPARK PLUGS

This plug increases the protection on the engine end of the plug by adding a porcelain cap, so arranged and enclosed that it is protected against breakage, and yet gives plenty of air space between the porcelain (within the firing chamber) and the outer steel shell. This renders the chance of short-circuiting through carbon formation exceedingly remote. The plug is so constructed that the high pressure, due to compression, tends to tighten rather than to loosen it. Being practically oil and soot-proof, it is especially adapted for use in air-cooled engines that use a large amount of lubricating oil.

Profits in War on Jack Frost

Making Money in Motor Accessories for Winter Wear—Some of the New Lines on the Market Which Hardware Dealers Should be Handling—The Auto is no Longer a Seasonable Vehicle.

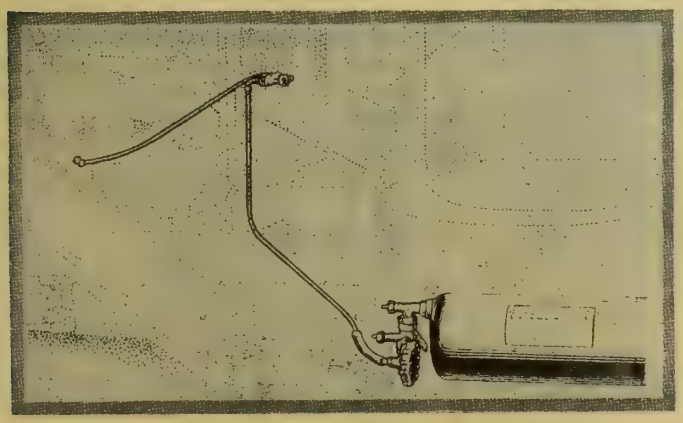
AUTOMOBILE accessories are becoming a very important department for the hardwareman. New articles are coming on the market all the time. The ingenuity of armies of experimenters is being taxed to find new ways of making travel by motor car easier, more comfortable and faster. At the present time of course the chief interest that attaches to the huge output of new accessories, lies in the matter of cold weather articles.

It is not so very long ago that winter travel in automobiles was regarded as extremely problematical and even a little dangerous. People went out in their cars, it is true, but it was only on special occasions. They did not attempt to go far. Also such outings were usually accompanied by much discomfort. The driver sat crouched behind his inadequate wind shield and the passengers in the tonneau shivered under rugs and turned their blue faces longingly even in the direction of the plebeian street car. If the car were left standing it "froze up." If the driver were careless, it skidded and careened wildly on the frozen roads.

But all that is past; the motor car now can be operated all winter long without any discomfort. This is due, first, to improvements in the car itself which have made starting an easy matter and have done away with the dangers of freezing, skidding and stalling. In the second place the increased ease and comfort of winter motoring is due to the many accessories and improvements which have been introduced for the use of the passenger. There are improved gloves, a great variety of car heaters, scientific and close fitting rugs, special ventilating "kinks"—in fact, an infinite variety of ingenious devices which have robbed Jack Frost of his terrors.

The onward march of automobile progress has, to sum it up, backed Jack Frost off the map. The man who cannot run his car now the whole year around, is either over timid or unaware of the advances made in the matter of accessories.

NAMES AVAILABLE.



Names of manufacturers interested in the various lines of winter accessories mentioned in this article can be secured by writing to the editor of HARDWARE AND METAL.

Selling the Public

The hardwareman who handles accessories should see to it that he has now—or as soon as he can get his orders filled—a supply of the accessories that will appeal to motor owners for cold weather use. There is not a single automobile driver in the community who would not be included on the list of probable purchasers of such goods.

The accessory business is no longer confined to supplies for the car itself. The question of supplies for the passenger is becoming almost equally important.

For several years past the demand for winter cars has been becoming more insistent, but it has only just begun to be met to the satisfaction of the average buyer. Limousines, and other closed cars were, in the beginning, extremely costly, and it is only within the past few years that medium priced enclosed bodies have been obtainable. But even closed cars, while they are better than the open vehicles, do not give in themselves the comfort desired by the great body of users. So with the demand for cheap winter tops there came a call for heaters, for easy starting devices and for all the hundred and one other ap-

Showing how an Acetylene Primer is Installed.

A Rainshield which prevents deposits on Windshield.

pliances and fitments which make winter driving comfortable and safe. And as a result of the activities of the manufacturers to meet this insistent demand, the motor car is no longer a seasonable vehicle.

Car Heaters

Perhaps the most important item that a car needs for winter use is a heater. It is possible now to make a closed-in car almost as cozy and comfortable as the living room at home. It is not an unusual sight to see women dressed in the flimsiest of evening garb sitting comfortably in brilliantly lighted cars that traverse an atmosphere of arctic bitterness.

There are three general types now on the market—the electric heater, those using exhaust gas and those employing special coal bricks. Although the electric and coal types are effective, they are not quite so popular as the exhaust heaters, probably because the later cost nothing to operate when once installed. It is usual to give the heater added utility by making it act as a foot rest which is the case in at least one of the prominent makes. In this particular type there is a connection from the heater to the exhaust system and a suitable regulating valve in the line so as to make it possible to divert any quantity of heated gas through the foot rest. For this season this heater has an added feature in the shape of a perforated metal shield, which acts as a protector so that the heat may be turned on full blast without any danger of injury to clothing or shoes.

A rather unusual form of heater is on this market this season which encloses the exhaust manifold and sends the hot air back to register either in the tonneau or the front department or in both. A shutter in front, operated by a rod, is used to cut off all air, permitting the exhaust pipe to become heated quickly.

There are many different types of electric heaters. Some are in the form of foot rests, getting their current from storage batteries. Then there are several varieties which serve to keep the driver's hands warm. This is an important point as the driver's hands are certain to become cold no matter how comfortable the interior of the car may be kept. One heater consists of two neat leather covered grips that lace on the steering wheel in any position. There grips, protected by brass grips, contain a heating unit that gives out a constant flow sufficient to warm the hands.

Then there are robes made to cover the whole front compartment and shut out the air. It is constructed to fasten at the bottom of the wind shield and the sides of the body and has a special flap at the steering post. Still another robe on the market is designed to protect passengers in the tonneau by covering the entire body, leaving only the head exposed.

The Question of Gloves

The selection of suitable driving gloves is by no means an easy task because there are so many individual tastes, and so many attempts to supply them. There are some really new types for this season. One of them, is really a two-in-one article in that it conbines two separate gloves—one a double weight stocking-knit, fulled, wool glove with long close-fitting wrist, over which is fitted a complete leather glove made of washable cape with strap at the wrist. The whole makes a neat and practical hand covering.

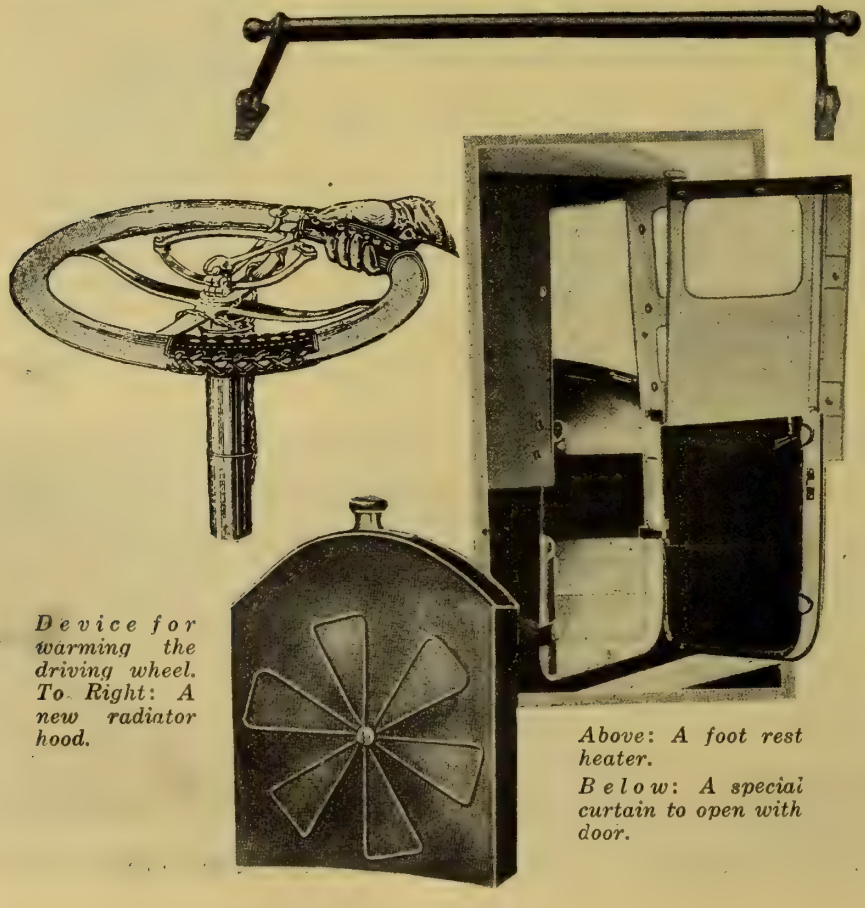
WHY?

O, why should the business of winter
be dull?
There's a question for dealers and jobbers to mull.
Through the hot months of summer the
orders come fine,
But when it gets cooler they hit the
decline.

O, why should the business of winter
be punk?
There's a reason, of course, but it's
mostly all bunk.
If the folks would get busy in store
and garage
The reason would fade like the merest
mirage.

O, why should the business of winter
be dead,
When it should be alive and quite
healthy instead?
Does the motorist quit when the weather gets cool
And go back to the horse or recalcitrant mule?

O, why should the business of winter
run down?
With the roads getting better in country and town,
With a million more motorists now
than there were,
With the needs of repairs that are
bound to occur.



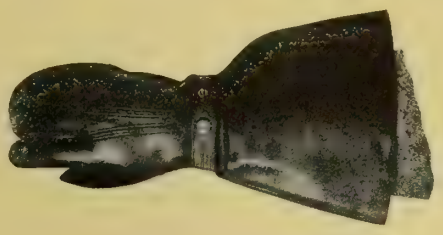
O, why should the business of winter
be bad,
And why should the jobber and dealer
be sad?
Well, it's largely because they expect
it to be,
And it meets expectations right down
to a T.

O, why should the business of winter
be slow?
Well, to tell you the truth, I'll be
damned if I know.
But I'll give you my word, if we all
boost together,
Good business will not hang on season,
nor weather.

—J. H. R.

Comfort of the Driver

During the past year or so there have been introduced a number of accessories for furthering the comfort of the driver and the principal one of this group is the windshield cleaner. The windshield cleaner or windshield protector when properly designed is highly appreciated in snowy weather, for we all know how uncomfortable it is sitting behind the wheel with the shield hardly



Device for warming the driving wheel. To Right: A new radiator hood.

Above: A foot rest heater.
Below: A special curtain to open with door.

penetrable by human vision. There are a few types of clear-shield devices, as they may be called. In one a squeegee is carried across the glass in front of the driver and thus by one movement of the arm the glass is made clean. In the other type a visor is used to prevent rain or snow from reaching that portion of the shield immediately in front of the driver.

Aside from using an anti-freeze mixture for preventing damage to the motor, it has become quite common to make added precaution possible by using a hood and radiator cover. There are innumerable designs and constructions in covers and they serve their purpose well, but for interior work, that is, for preventing freezing when the car is in the garage, a heater of some sort is recommended. There are two general types, those which heat the garage and the engine and those which are small and mounted under the hood, operating by means of electricity. The latter are the newer ones and have come into prominence only during the last year or so. There is a small device about seven inches long containing a heating unit, which receives its current from the lighting circuit of the garage. All that is necessary is to attach the lamp cord of the heater to the light socket, place the heater under the hood and turn on the current. The selection of a suitable radiator and hood covering will depend largely upon the make of car, for it has become the practice for manufacturers of these accessories to make special designs particularly adapted for certain makes.

A New Type of Driving Glove.

Then there is the question of tire chains and even of coverings or overshoes for the tires. There are numerous lines on the market. Then come such accessories as priming plugs, primers and vaporizers.

In primers there are two large classes, those injecting gasoline into the manifold, and those forcing in acetylene, and in the vaporizers there seems to be but one type which is dominant and that is the electric. Of the acetylene primers, there is one on the market that has a connection from an acetylene tank to a controller and from the latter to the inlet manifold. By turning a handle, gas is allowed to flow from the tank through a reducing valve to the controller and then, by pressing another valve, the gas is passed to the inlet manifold. The engine may be operated on acetylene as fuel and in fact often is used as emergency fuel. Another primer, one which uses gasoline, consists of a pump connected to the main fuel line or to an auxiliary tank on one side and to the inlet manifold on the other. By operating the plunger of the pump, gasoline is drawn into the pump and forced into the inlet manifold.

And Finally the Garage

Lastly, there is the garage heater to be installed. There are dozens of manufacturers of heaters designed especially for the private garage and the types include hot air and hot water types, using oil, coal or gas.

In conclusion, it may be pointed out that these accessories are offered for the purpose of making winter travel comfortable and represent, therefore, but a small proportion of the great total of articles now offered. The accessory business has grown to enormous proportions and the enterprising hardwareman can by judicious selection of the goods that he can sell most readily in his vicinity, make of this line a splendidly profitable department.

Accessory Jobbers Assn. to Help Trade

Number of Firms Have Already Joined Canadian Auxiliary of National Automobile Association of Automobile Accessory Jobbers — Manufacturers Met Association to Hear Plans Detailed

THE second meeting of the Canadian Auxiliary of the National Association of Automobile Accessory Jobbers was held in Toronto at the National Club. The object of the meeting was the furthering of the organization work in greater detail and in meeting some of the Canadian manufacturers who are interested in the project. The Canadian Auxiliary, as outlined in HARDWARE AND METAL of Nov. 4, was organized three weeks ago. Those who are already members of the association are: The Canadian Fairbanks-Morse Company, Montreal; Hyslop Bros., Ltd., Toronto; Motor Car Supply Company, Calgary; John Millen & Son, Limited, Montreal; F. S. Evans & Son, Windsor, Ont.; Cutten & Foster, Toronto. Other firms have made application and these will be acted on in the near future by the parent association. At the meeting also were a number of Canadian manufacturers who are interested in the project. Manufacturers of automobile accessories are entitled to become associate members of the association.

"The idea of the association is primarily for the purpose of assisting the manufacturers and jobbers in making a better distribution of goods," stated G. M. MacWilliam, General Manager of Hyslop Bros., Limited Toronto, and secretary of the new organization, to a representative of HARDWARE AND METAL. "The retail trade will be benefited in that the jobbers and manufacturers through the association will be better able to assist in merchandising goods. It is the purpose of the association to carry on educational work among the dealers. The garage man and accessory man needs assistance in merchandising. The committee recently appointed by the National Association reported at the convention held in St. Louis last month, that a national campaign in publicity should be carried out. By better merchandising is meant not only the proper display of goods and availing themselves of manufacturer's advertising catalogue leaflets, etc., but also the improving of their relations with their own customers and with the jobbers.

"We all know that customers impose on the garage man and accessory dealer in the way of open accounts and in not taking or keeping goods ordered, and in many other different ways. The dealer not knowing differently, feels that this is business custom, stands for it and then asks the jobber to do the same, and so on, up to the manufacturer. We also want to create a better feeling for co-operation between the dealer and jobber. A dealer should know he should not order out a bill of goods and then refuse them on arrival, even if promptly shipped, without being willing to repay return charges and cost of handling. Such a situation aggravates both parties, does not tend to good feeling and sometimes causes mutual loss.

Services to Manufacturer

"The objects of the National Associ-

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, NOVEMBER 18, 1916 No. 46

IT IS after all little comfort for the harassed business man to learn that coal is $50 a ton in Italy.

* * *

NOW THAT the presidency is definitely settled, they'll be oiling up the old White House typewriter.

* * *

NO, ABSOLUTELY, there is no connection between Who's Who and Here's How. On the contrary.

* * *

THE HARDWAREMAN pretty nearly needs an adding machine to follow the hardware markets nowadays. Something doing all the time.

* * *

SALESMANSHIP does not consist in selling snow-shovels nowadays. The man who deserves the title is selling paint and getting advance orders on fencing.

* * *

PROPHETS predict a cold winter. Tell your customers how comfortable a house is which boasts a coal range in the kitchen. Hot water heating is not always sufficient.

PRICES STILL SOARING

THE hardware market reports of HARDWARE AND METAL last week showed one of the most extensive lists of price changes that has occurred in any one week this year. Another list of even greater importance will be found in the market reports this week. It is impossible to say with any degree of accuracy when or where the present upward movement will end. We can only repeat what we have said on many occasions during the past year, and warn the retailers to keep in close touch with market conditions and, to take now the profits which are justified by present costs of hardware.

At present there is no indication of lower prices. Six months ago many people were predicting that the war would be over before the end of the year. Views have changed somewhat since then, and at least another year, or possibly two years, it is thought, will pass before hostilities have ceased. As long as the war continues and the demand for munitions continues, there will be no great reduction in prices. Scarcity of raw materials and labor have greatly aggravated the situation and have helped to force prices upwards. Manufacturers are still falling away behind in deliveries. With an insistent demand for fall goods, many jobbers' stocks are becoming depleted of certain lines with little hope of replacement for some months to come. Even after the war is over, there is likely to be a period of high prices on steel goods.

An article elsewhere in this issue dealing with the iron and steel situation will give readers some idea of conditions as they now exist.

PERSISTENCY THAT PAYS

IT IS a strange paradox of advertising that many a man will boost, for all he is worth on a proposition that is losing heavily; will spend money and hours in finding new ways and arguments to make the thing go, only to drop it at the flood tide of its success to shift for itself.

It is a short-sighted policy that enables this to happen time and again, that fosters the impression that advertising will carry on under the power of its momentum.

The men who have achieved their success through advertising never desist. No matter how good their product, they know that the public needs to be told, and needs to be told repeatedly. Persistent hammering is the basis of successful advertising. There are so few things to make the public remember, a thousand outside influences to make them forget.

There are thousands of instances that might be enumerated. Many of the fads of yesterday are dead and gone, not because what virtues they had have departed. They were as good or as bad now as then, but their virtues have ceased to scream at you from the newspapers and to glare at you from the signboards. You remembered somebody else's pills or lotions, because they speak so highly for themselves, but the old reliable much vaunted remedies forgotten in a moment. Think of it yourself. You can remember advertisements you have seen. The tinge of them still lingers in your memory, a shadowy suggestion of something, but the focusing power has gone. Memory has failed you. It is dead advertising, a pitifully pointless thing.

Men will find a thousand reasons for discontinuing successful advertising. His trade is as good now as he needs. He is oversold in many lines and does not need to push.

Here is the vital mistake, the false security is a chimera. Good business may drift into failure, and a word that is not on everyone's lips is soon forgotten. You may not need the advertising to-day but you will to-morrow and to-morrow you will have to face two days of forgetfulness.

This is one of the mistakes of advertising and it applies to retailer as well as manufacturer. Intermittent advertising loses half of its punch, a persistent advertising campaign is better than starting incursions into the field. Because retention of an idea is what is aimed at in the advertising field, and few advertisements have attraction enough to carry themselves in memory for any length of time. No, advertising is the science of persistence, and its motto, Boost—winning or losing, boost all the time.

Stop Our Advertising? Not Much!

A Suggestion Thrown out at Meeting of Hardwaremen—"Thrown Out" in a Double Sense—A Discussion of the Ethics of Advertising

THERE are still people who do not believe that flying machines can fly. There are a few bright spirits who scoff at science and loudly declaim that the earth is flat, f-l-a-t.

And there are still merchants who do not believe that advertising pays.

This last reference does not apply to the numerous business men who believe that advertising can be overdone, that some forms of publicity are useless and harmful, or that too much of it has a tendency to force special business at the expense of regular trade. There are many retailers included in this class; but they all actually believe in advertising as a principle.

There are certain men, however, who avowedly do not believe in advertising in any form, who do not think it possible to get business by publicity, who blink their eyes at the lessons of the Mail Order Houses, and would rather let the cobwebs grow across their doors than break into print with a sales announcement. It sounds incredible. But the fact remains that there are such men. And some of them are hardwaremen. Olav hasholam! Here HARDWARE AND METAL has been preaching the gospel of judicious advertising for thirty years, more or less, and there are still a few hard old sinners who refuse to come up to the penitents' bench!

One of them came to light a short time ago at a meeting of retail hardwaremen. The dealers in hardware in a certain town in Canada have been holding meetings regularly for some time past, with the object of getting to know each other better and of solving some of the evils that crop out when the dogs of trade war are let loose. Their meetings have been friendly and of practical value to all concerned.

At the last gathering, however, one of the members rose up with a suggestion.

"I propose that we all agree to stop advertising in every form," he said. Advertising was a useless expense, he went on. It was costing them all more or less money, and if everyone agreed to drop it, why it would not be necessary for any of them to spend a cent.

Quite apparently he regarded advertising as outlay pure and simple; a form of extravagance into which they had all strayed because the other fellows were doing it.

Across the room was a hardwareman who used newspaper space extensively and so judiciously that, when he advertised an article, he generally sold that line out. Advertising was as valuable to him as his good will; in fact, it was part of his good will. This man looked at his chief competitor, also a big advertiser; and it was quite probable that a broad smile passed between them. The spokesman, you see, was not a big advertiser himself. His "big pushes" in the advertising field were little better than half-hearted nudges. He spent cents where the other men spent dollars.

It was a good deal the same as if Venezuela had suggested to Great Britain a mutual scrapping of fleets in the interests of economy.

The suggestion, therefore, fell upon unresponsive soil. In fact, it was promptly voted down. But the mover still had another shot in his locker.

"Then," he said, "if we can't agree to stop advertising, let's agree at any rate to stop quoting prices in our ads."

It was as though a Pacifist had wormed his way into the trenches and, after failing to convince the soldiers that they ought to stop fighting, addressed them as follows: "Well, if you refuse to stop shooting, at any rate stop aiming straight!" Just exactly as bad as that. Advertising pays best when prices are quoted. Prices are the life of advertising. A bare announcement that "J. Blank sells hardware" is not without value. But it is only when J. Blank tells the public that he sells goods at such and such a price that customers begin to line up in front of his store.

The hardwareman is not the only one suffering from sudden price advances. Nails have been volplaning, but look at what flour has been doing! The cartoonist here shows the situation that has developed.

Of course, the other men present knew this. They were in the custom of quoting prices in their advertisements and had no intention of killing the goose that laid the golden eggs. So suggestion No. 2 went the way of the first.

The above incident is quite true and serves to point a moral not only for the retailer, but for the man at the other end as well—the manufacturer. Retailers have been known to get together and agree not to advertise and so also, it is said, has the manufacturer. It is a mistake of the worst kind for, in the first place, it is one of the primary and established business principles that advertising pays. In the second place, it is highly ridiculous to suggest that you advertise only because your competitor does; this implies that advertising, after all, must be valuable, if you don't want your competitor to have all the advantages of it, so you are advertising for value after all. It is even more ridiculous to suggest that, if you want to quit, it would be better to get the other fellow to stop, too. **For it is also an estblished business principle that the advertising of your competitor helps you.** It creates an interest in the line of goods you handle and stirs up new demand. If you decide to stop advertising, do not importune your competitor to do the same. Urge him to stay with it. You will get, say, about 10 per cent. of the benefit; and that is better than not having him advertising and no benefits to split at all. Of course, he will be getting the 90 per cent.

Altogether, it is better to keep on keeping at advertising.

And then as to quoting prices: What has been said with reference to that phase of it applies to the manufacturer as well as to the retailer. If the quoting of prices brings customers to the retailer, so also does it bring enquiries and orders to the manufacturer from the retailer.

This has been quite a sermon—a weekday sermon. But it is earnestly meant and it is based on solid facts and common sense principles.

So let it sink in.

Stove Makers Taking Smaller Profits?

Manufacturers Declare They Are Making Smaller Profits Nowadays Than Ever Before, Although Prices of Stoves Are Increased Since the War—Market for Stove-making Materials Shows Tremendous Percentages of Increase — Should Stove Prices go Higher Still?—Some Makers Say They Should Not.

STOVES this season are selling at prices which from the manufacturer's point of view present a startling difference between the percentage of increase on cost of materials for manufacture, and the percentage of increase in actual selling price to the retailer.

It is true that stoves are costlier than they have been for a considerable time. It is also true that the situation as regards metals and other materials used in stove manufacture is growing worse instead of better from the manufacturer's point of view. Yet when HARDWARE AND METAL interviewed leading Canadian stove and range manufacturers, the consensus of their opinion was that stoves and ranges as being marketed in the Dominion to-day while priced higher than formerly, and while manufactured of materials which have increased in cost most phenomenally since the war, are still on sale at what may be called distinctly 'reasonable' prices, and may not go much higher.

Prohibitive Price Feared

Representative heads of firms all considered beyond question the fact that cost of materials and labor have placed the manufacturer in a position to make smaller profits than ever previously on stoves. They all inclined to the idea that if feasible it would be desirable that stove prices should increase in Canada to enable the manufacturers to carry the burden of having to buy materials far ahead at vastly enhanced prices, and at the same time to pay immediate and advanced price for skilled labor. But they all inclined also to the opinion that there is a prohibitive price for stoves and ranges the effect of which is to shut the doors on sales, the public preferring to make shift with any old thing rather than undertake the expense of buying new stoves at high prices created by unprecedented conditions. Therefore manufacturers at large in the Dominion are accepting the inevitable and paying tremendously large percentages of increase in the prices of raw materials, and greatly enhanced prices for labor, but are charging for their product market prices out of proportion to the increased cost of production.

Stoves Up 25 Per Cent. to 30 Per Cent. in Ten Years

It is claimed by manufacturers of stoves that in the past eight or ten years stoves have increased in price by only about 25 per cent. to 30 per cent., though they have been greatly improved in convenience and design during that time. In the opinion of men in the manufacturing line the percentage of increase in stove prices due directly to the effects of the present war, is only 15 per cent., or one-half of the total percentage of advance. Increased cost of labor, and increased cost of materials not brought about by the war are responsible for the other ten to fifteen per cent. of the advance in stove prices. The factor of labor is now exceedingly important, as it is not possible to get skilled workmen to devote anything like the former working day to the manufacture of stoves. The workmen work with greater skill, and are greatly aided by improved machinery, but their output is not so vastly increased as compared with previous years, because they can earn enough to live on in comfort without giving so many hours to their trade. Labor is much more independent nowadays and the lack of help occasioned by the war conduces to still greater independence on the part of skilled workers. The result is that it is not possible to speed up manufacture even to suit enhanced demand, and a whole shipment of almost completed stoves may have to await some final accessory in the nickelled or turned line before they can be despatched. Or the delay may take place in some other department. This represents the nature of the difficulty of "delivery" upon which manufacturers of stoves set so must stress in business talks with retailers nowadays.

The Retailer's Profit

In the opinion of manufacturers of stoves, the retailer ought to be assured of his usual profit in selling this important line of hardware at the present time. With so many lines of hardware, mostly in the iron and steel departments of the trade, increased greatly in price, it should not be hard for the enterprising retailer to convince the customer for a stove of the necessity for paying more than he may have paid five or six years ago. Customers do not buy ranges quite as often as they buy some other lines, so the advance in prices of stoves may come as a shock to the enquirer not a newly-wed or benedict-to-be. But the retailer who is not watching the markets for metals and hardware pretty closely nowadays may make costly mistakes in parting with stoves that have been in stock for a little time. A five per cent. advance in stove prices of a number of manufacturers took place a couple of months ago and was reported in HARDWARE AND METAL

(Continued on page 46.)

STARTLERS FOR THE STOVE-MAKERS.

Percentages of increase since the War in prices of various materials used in the manufacture of stoves and ranges:

Pig iron	54%
Steel	90%
Copper	145%
Bolts and Rivets	130%
Plating Supplies—	
Metal	15%
Salts	25%
Sulphuric Acid	233%
Nitric Acid	66%
Fire-brick Linings	20%
Urns	20%
Nickel Bands	25%
Nickel Rings	25%
Furnace Rings	20%
Iron for Pans, etc.	60%
Galvanized Iron	60%
Coke	15%-20%
Steam Coal	10%-15%
Black Lead	50%
Aluminum	300%
Asbestos	10%
Emery Wheels	136%
Tiles	10%
Lacquer	30%
Paper	200%
Glue	25%
Lumber	15%
Nails	100%
Riddles	25%
Shovels	25%
War Tax	7½%

Above percentages of increase have been obtained from manufacturers' estimates over a wide range of enquiry in the United States and Canada.

Ramsay & Son Annual Convention

Representatives From all Branches Met at the Head Office —Plans Outlined for Coming Year— Closed With Banquet.

BUSINESS discussions of the most practical and constructive nature characterized in marked degree the most successful convention ever held by the firm of A. Ramsay & Son Company, manufacturers of paints and varnishes, Montreal. The convention was held at the head office of the company at Montreal.

Representatives of the firm from Halifax to Vancouver were present and took part at both convention and banquet, at which proceedings were most pleasantly concluded. The encouraging and substantially effective nature of the transactions at the convention brought out in a marked degree the efficiency of the organization, adding greatly to the enjoyment of the concluding function.

As chairman of the convention, A. D. Brown, the manager, acted in his usual capable manner and the soundly based spirit of optimism which he gave to all his share of the proceedings permeated every member of the organization present. Plans and campaigns in the sales getting arena for 1917 were outlined and explained, the experiences of the members over the widest fields of their operation were closely compared and considered and careful attention was given to details of the firm's affairs as brought up for discussion.

Particularly interesting and of more than usual importance in view of conditions at present, was the close and special attention paid to the many new and original features and plans of campaign in connection with advertising, which were brought forward, thoroughly discussed, approved, and accepted for the ensuing season.

Following the convention a most successful banquet was held at the Montreal Club, the chairman being the President, Lieut. Walter B. Ramsay, of the Fifth Royal Highlanders, who presided in a manner worthy of the occasion. Affairs at the banquet went with magnificent swing, thoroughly bringing out and emphasizing the excellent spirit of comradeship and unity that exists. Taken altogether, convention and banquet combined to mark one of the most successful periods in the history of this firm, which was established in 1842, and the proceedings from start to finish inspired every member present to still greater effort individually and in unison for the coming season.

Members of the staff of A. Ramsay & Sons Co., Ltd., who attended the Annual Convention, held recently at the Head Office, Montreal.

Trade Inquiries

The Department of Trade and Commerce has received the following inquiries relating to Canadian trade. Addresses may be secured from the Department, or from the Editor, Hardware and Metal, Toronto, Canada. Please quote reference number when requesting addresses.

1537. **Washing machines.**—A South African firm of wholesale merchants asks for catalogues and price lists with full particulars regarding washing machines or any other lines of household utensils.

1541. **Paints, oils and varnish.**—A South African firm of wholesale merchants asks for color lists, price lists, and where possible samples, from Canadian manufacturers of paints, oils and varnishes.

1542. **Brushware.**—A South African firm of wholesale merchants is prepared to purchase Canadian brushware, and asks for catalogues and price lists.

1546.—**Handles.**—A South African firm of wholesale merchants requests samples and prices and particulars of delivery on hammer, pick, axe, tool broom and other handles.

1548. **Iron and steel.**—A Durban firm who specialize in cart and carriage ware supplies, would like to hear from Canadian manufacturers of bar iron and rods, bolts and nuts and other iron and steel supplies for this trade.

1553. **Hardware.**—A Durban firm asks for catalogues and samples where possible, prices and full particulars re packing on household hardware only.

1556. **Iron and steel.**—A Durban firm requests correspondence from Canadian manufacturers of bar iron and rods, mild steel bars, bolts and nuts, and other iron and steel productions.

1557. **Woodenware.**—A Durban firm requests catalogues and full particulars of Canadian made woodenware of all kinds.

1558. **Handles.**—A Durban firm requests samples and prices and particulars of delivery on hammer, pick, axe, tool, broom and other handles.

1559. **Hardware.**—A Durban firm requests correspondence from Canadian manufacturers, enclosing catalogues, price lists and samples when possible of building and household hardware, including stoves and enamelware.

1560. **Washing machines.**—A South African firm asks for catalogues and price lists with full packing particulars regarding washing machines or any other lines of household utensils.

1570. **Hardware.**—A Durham firm of general merchants is prepared to purchase from Canada, household, building and other hardware, such as tools, locks, lamps, lanterns, stoves and household utensils suitable for hardware department.

1571. **Paints and varnish.**—A Durban firm of general merchants is prepared to take up a line of Canadian paints and varnish. Color cards, prices and literature, with some samples, requested.

1625. **Agency.**—A Natal commission house is prepared to take up Canadian agency in mining material and supplies of all kinds, fencing material, iron and steel, wire of all kinds, agricultural machinery and motor vehicles.

1627. **Handles.**—A Durban commission agent in close connection with the mining trade is prepared to take up Canadian agency for pick, shovel and tool handles.

1632. **Agency.**—A South African commission agent with offices in Durban and Johannesburg is prepared to take up Canadian agencies in handles, woodenware, enamelware, kitchen utensils, hardware, cotton, piece-goods, hosiery, underclothing, tools, lanterns, foodstuffs, canned fish and other lines.

1635. **Agency.**—A Durban firm of importers asks for samples and particulars from Canadian manufacturers of wire, barbed, plain and galvanized; also nails and other iron and steel lines.

1637. **Wrought iron and wire.**—A South African manufacturing firm asks for samples and quotations on wrought iron, suitable for tubular gates, wire, barbed, plain, galvanized, and spring steel wire for upholster work.

1638. **Machinery.**—A South African manufacturing firm asks for catalogues and full details of machines suitable for the weaving of screening wire in sizes from ⅛-inch mash, 20 gauge, up to about ⅝-inch mesh, 10 gauge wire.

1640. **Agency.**—A Cape Town commission agent is prepared to take up representation in South Africa for Canadian hardware (all kinds), iron and steel, three-ply wood (cabinet), three-ply wood (building), paper (all kinds); furniture, such as chairs, tables, bedroom suites and other k.d.s. lines, rubber goods, such as conveyor belts, rubber hose, rubber jointings, rubber valves, canvas hose, fire hose, fire extinguishers, mining hammers, four-pound shovels, pickaxes, wire nails, disinfectants, bitumen paint (grey and black), wire (all kinds), foodstuffs, including salmon, condensed milk, vegetables, canned, and other proprietary lines.

When Will Iron and Steel Prices Decline?

Retailers Beginning to Wonder if End of Record Prices is in Sight—Certain Tendencies Having Bearing on Future Outlook—View in the United States.

A YEAR ago wire nails were selling to the retail trade around $2.70 base. To-day the price is over $4.00 base, or, to be exact, $4.10, Toronto, and $4.15, Montreal. At the outbreak of the war nails were quoted at $2.25. During the first few months of 1914, they were obtainable at prices ranging around the $2 mark. The high levels at which nails are quoted to-day, was thought impossible a year ago. But nails are only one of the hardware commodities which have reached dangerously high levels. Even greater advances have been made in the prices of other products made of iron and steel which reach the consuming public through the hardware trade. There is a severe scarcity of many lines of iron and steel goods. Despite the high prices obtainable, manufacturers, on account of the scarcity of labor and raw material, are frequently unable to meet the demands made upon them.

The question on the lips of every hardware retailer to-day is, "When and where will the limit be reached?" Price changes have been accruing with alarming rapidity and regularity. Is it any wonder that the retailers are wondering if the saturation limit is not near at hand? Is it any wonder that many retailers are rather afraid to place orders for future delivery, owing to the danger of a sudden decline in prices? The responsibilities of the average traveler representing wholesale jobbing houses has more than doubled during the past year. Retailers are consulting travelers regarding "quantities they should purchase," much more than they ever have in the past. "Is it safe to buy a gross at the present price?" is a question that greets the traveling salesman at almost every turn. Travelers, like all other sellers of iron and steel goods, are doing their best to answer inquiries, but, frankly, very few in the trade to-day will attempt to predict what is going to happen six months hence. Six months ago it was not thought that present high levels would have been reached by this time. Just as great advances may take place in the coming six months as in the past, time alone can tell. The best informed men in the trade are adverse to prophesying what might happen. They do not know, and they are frank in saying so.

Signs of the Times

Although the method is vague at present there are certain tendencies which have a direct bearing on the market and will have for some time to come.

The Imperial Munitions Board has announced that there are enough orders on hand for shells to keep the munitions plants busy until the end of June, 1917. The manufacture of component parts is now well established in Canada and smaller quantities, if any, will in future be purchased in the United States.

Heretofore, considerable quantities of fuses, primers, and steel were purchased from the United States. With the munitions industry in Canada, now at its highest peak since the outbreak of the war, the demand for steel for shells is proportionately greater. Although operating at full capacity the mills are still unable to take care of the heavy demand.

COMPARATIVE PRICES—MONTREAL BASIS

	Nov. 10. 1916	Sept. 15, 1916	June 15, 1916	Mar. 15, 1916	Nov. 15, 1915	July. 31, 1915	Aug. 1, 1914

The Trend in U. S.

An indication of the trend in the steel market is the report of the U.S. Steel Corporation which shows unfilled orders for the month ending Oct. 31 totalling 10,015,260 tons, an increase of 492,676 tons over the preceding month. The unfilled tonnage for October constitutes a record. The steel output of the United States in 1916 is already far in excess of any previous year, and the total for this year will probably be double that of four or five years ago. Even so, a serious scarcity of many important products exists now, and mills are refusing more business than they are accepting for some classes of steel.

Export business declined by U. S. domestic steel manufacturers, it is claimed, continues to mount up. One U.S. authority states that for a time such offerings have been at the rate of almost one-half of the total U. S. output of steel. Many of the official or published prices are deceptive because of high premium prices which are being paid for early deliveries. These premium prices are frequently greatly in excess of the current market prices. The producers of unfinished steel are still in a position where they can demand fabulous prices. They know that the demand cannot be met for some time to come.

Pig Iron's Startling Performance

The pig iron market has cut loose, after months of quietness, and is now acting not unlike the war market for steel. The advances of the past three weeks are without parallel in the experience of the oldest men in the trade. The advances, it is claimed, are not due so much to a heavy demand for immediate shipment, as to efforts on the part of buyers to cover for future requirements for 1917—in many cases for the second half of next year. Heavy sales

(Continued on page 45.)

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The list of price changes this week is almost as extensive as the unusually heavy list of last week. All price changes are upwards and include high prices on buttweld and lapweld pipe, both black and galvanized. The new price on lapweld is a further advance over the one which went into effect last week. Other lines on which advances have taken place are step and extension ladders; fire ladders; hoop steel; stove pipe wire, tinned wire; stall fixtures; building papers, including dry and tarred fibre; surprise sheeting; clothes line, cotton rope and sash cord; cotton twine; steel bars; candlewick; asbestos wick; glue; clocks; leather tap soles and top lifts; skates; pig-iron; auger bits; whips, door knobs; builders' hardware; padlocks; cutlery; fibreware; pitcher pumps; whisks; copper wire; gum shellac; linseed oil; locks; knobs; wrought butts and hinges; corrugated machine bolts and nuts, etc.; linseed oil; machine bolts; sleigh shoe bolts; coach and lag screws; skein bolts; square head blank bolts; bolt ends; plow bolts; elevator bolts; fancy head bolts; shaft bolts; step bolts; square and hexagon nuts. Higher prices are expected on paints, white lead in oil, putty, conductor pipe, eavestrough, lawn mowers. Wholesalers are having considerable difficulty in securing supplies. Many manufacturers cannot meet the demands made upon them, despite the high prices obtainable for their products. Business continues brisk. The advent of cold weather has stimulated the demand for late fall and winter lines.

MONTREAL MARKETS

MONTREAL, Nov. 15.—There is no sign of any dwindling of demand due to the high prices prevailing for hardware lines at present. On the contrary, it seems as if orders come pouring in faster than ever. Executives and clerks are working overtime in Montreal at present to keep pace with the alterations in prices, and at the same time to fill the numerous orders coming in. The iron and steel reports show still more firmness, and yet far more iron and steel goods could be shipped in response to orders than there are stocks available to fill orders. It is impossible to count on deliveries. Price counts for less than delivery now in importance, declare men in intimate touch with supply and demand conditions today. Copper features strongly in the Montreal markets, and lead is firmer. Tin is very strong. There is a good demand for all classes of seasonable goods; sleigh bells have been in better demand, and all sorts of hardware gift lines have been moving fast. Percolators, cutlery, carpet sweepers, skates, and snow shovels have been rapidly absorbed by the markets in the country around, and the rush of orders before close of navigation is heavy.

Great Firmness in Iron and Steel

IRON AND STEEL.—News of the signing of a $25,000,000 shell steel order by Morgan's in the United States does not tend to relieve the situation as regards iron and steel. Prices are going up by leaps and bounds. It is almost impossible now to get quotations from the States for new supplies; the few mills not already sold up to capacity of their production for months ahead are quoting from day to day. Sheet metal is especially hard to get, and there are big orders for this from the Orient and Russia hungry to be filled. There is shortage of many lines of plates in Montreal There is tremendous firmness in the market for tungsten high-speed tool steel, and all tool steel goods are likely to be increased still more in price.

Iron Pipe Goes Still Higher

IRON PIPE.—In accordance with predictions made by HARDWARE AND METAL for some time past, iron pipe has again advanced. One advance on lapweld pipe was announced last week. Another one has taken place this week. as well as an advance on buttweld, in both black and galvanized. The new net prices are shown in a panel elsewhere in this issue and in the current market quotations.

Pump Rods Advance

Pump rods have advanced in price, and are now quoted as follows:—Small quantities, $6.30 per 100 lbs.; 500-lb. lots, $5.80 per 100 lbs.

Step Ladders Advanced

All step ladders have advanced 2c list or 1c net per foot. This change affects all makes. New prices on various brands are shown in the current market quotations.

Extension Ladders Advance

An advance of 1c per foot has been made on all common and roped extension ladders. Fire ladders and single ladders also share in the advance. New net prices are shown in the current quotations.

Hoop Steel Up 50 Cents

The strength of the iron and steel market is reflected in the market for hoop steel, which records an increase of 50c per 100 pounds on all lines of hoop steel.

Stove Pipe Wire Up

An increase is noted in stove pipe wire, No. 19 being quoted now at $6.40 and No. 18 at $5.90.

Tinned Wire Up Also

Tinned wire is quoted at an increase in price of 2½ per cent. over previous quotations. New prices are shown in current quotations.

Stall Fixtures Advance

Stall fixtures, all lines, are quoting now at 25 per cent. off list, instead of the accustomed 40 per cent. Cattle chains, all patterns and all makes, are advanced from 40 per cent. to 32½ per cent. off list.

Stove Pipe and Elbows Up

Stove pipe elbows are up; the 6-inch are quoted at $1.45 doz., and the 7-inch at $1.60. Stove pipe is also increased to $10.25 for the 6-inch, and $11 for the 7-inch size common.

Paper and Twine Show Advances

Building Papers Reach High Levels

PAPER AND TWINE.—Building papers are quoted higher this week. Dry cyclone is at $1.10 roll; tarred No. 1 at $1.15 roll; dry fibre No. 2 is 55c per roll; tarred No. 2 is quoted at 65c per roll;

ADVANCE ON BOLTS AND NUTS

Just as HARDWARE AND METAL is about to go to press an announcement has been made of higher prices on bolts and nuts. HARDWARE AND METAL has on several occasion during the past few weeks warned the trade to watch for this advance:

Carriage Bolts ($1), list, 3/8 in. dia. and smaller, 25%.
Carriage Bolts ($1), list, 7-16 in., 10%.
Machine Bolts, 3/8 in. dia. and smaller, 25%.
Machine Bolts, 7-16 in. dia. and larger, 15%.
Sleigh Shoe Bolts, 3/8 in. dia. and smaller, 15%.
Sleigh Shoe Bolts, 7-16 in. dia. and larger, 10%.
Coach and Lag Screws, 35%.
Skein Bolts, 30%.
Square Head Blank Bolts, 15%.
Bolt Ends, 15%.
Plow Bolts, 15%.
Elevator Bolts, 20%.
Fancy Head Bolts, 15%.
Shaft Bolts ($3 list), 15%.
Step Bolts, large head ($3) list, 15%.
Whiffletree Bolts, 15%.
Nuts, square, $1 off list.
Nuts, hexagon, $1 off list.
Stove Rods, per lb., 9¼c.
F.O.B. Toronto, Montreal, London and Hamilton.

Surprise sheeting is 60c per roll, and heavy straw tarred at $2.65 per 100 lbs.

Clothes Line Up

Cotton clothes line is up: 30 ft. now quotes at $1.35; 40 ft., at $1.70; 48 ft., at $2; 60 ft., at $2.50; and 72 ft., at $3 dozen.

Rope and Sash Cord Up

Cotton rope and sash cord show changes. Cotton rope is now 37½c lb. for the 3-16ths size, and 36½c for the ¼-inch and up. Sash cord—No. 6 is 44½c; No. 7, 43½c; and No. 8, 43c. Candlewick is 40c a pound now, and asbestos wick packing is quoted at $1.15 per lb.

Clocks, Glue and Leather Goods Up

Skates Move Upwards

SHELF GOODS.—Many lines of shelf goods show the prevailing tendencies of the markets at present. Skates have been advanced from 25 per cent. off list to 15 per cent. off list in some cases, but not all hardware wholesalers have made the same alteration. Skates, however, are generally much firmer priced than last year.

Clocks Go Higher

ALARM CLOCKS.—The "Ben" line are now $2.40 each for large and small sizes. The watch that goes with this line is now $1.05 to the retailer, or in dozen lots, $1 straight. The America alarm clock is $1 now, and the Ironclad $1.60.

Tap Soles and Top Lifts Up

Scarcely a fortnight has elapsed since the lists were advanced for tap soles and top lifts. These are up again by 25 per cent. on all lines, due to the British Government action as regards leather.

Auger Bits Up

Gilmour's auger bits (special) are now 60 per cent. off in Montreal, formerly 65 plus 5, and the ordinary make are 62½ per cent. off.

Glue Fails to Stick

That greatest sticker of all hardware lines for many a month in the midst of high prices, glue, has at last been forced to march with the times. Whitefish glue for many a day 20c a pound, is advanced to 25c a pound in Montreal.

Whips Up—All Lines

All lines of whips have been advanced 25c per dozen in Montreal this week.

NEW PRICES ON PIPE.

The new net prices on buttweld and lapweld pipe are given below. It will be noted that some sizes of lapweld pipe have advanced for the second time within a week. The advances on pipe have been predicted by Hardware and Metal several times during the past few weeks

	Per 100 ft. Black	Galvanized
Buttweld—		
⅛"	$ 3 50	$ 5 00
¼"	3 24	5 37
⅜"	3 24	5 27

9"	186 30	250 10
10" L	172 80	232 00
10"	222 50	298 70

Door Knobs Advanced

Builders' hardware has been inactive, but mineral and porcelain door knobs advanced in Montreal this week, being now quoted at $1.40 to $1.50 for Nos. 300 to 337.

Sheffield Cutlery Up

An advance of 15 per cent. over the whole range of previous list prices is announced by the Joseph Rodgers cutlery firm of Sheffield, England.

Fibre Ware is Up

A new list is coming for fibre ware, and will be subject to 15 per cent. discount. The increase shown in the new list will amount to 10 per cent. at least on all lines of fibre ware. Tubs are now quoted at No. f.3, $10.60; No. 2, $12.35; No. 1, $14.95; No. 0, $17.35

Pitcher Pumps Up

Nos. 1 to 5 pitcher pumps are now quoted 40 off list, an advance on previous quotations.

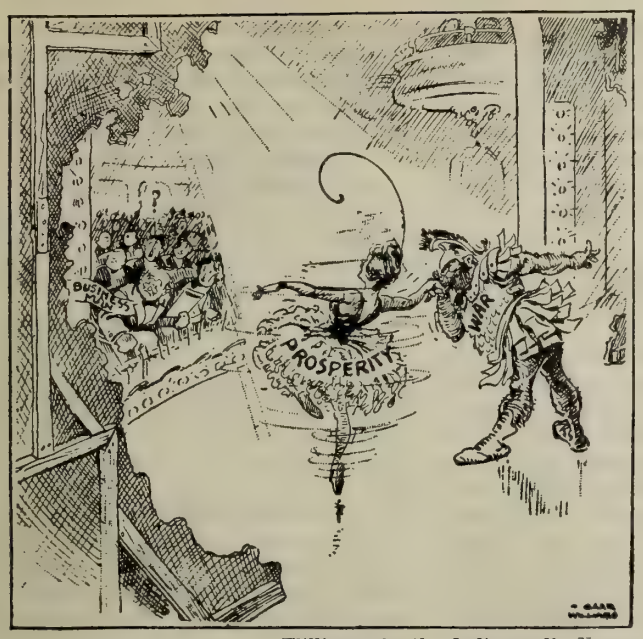
Linseed Oil Up

Linseed oil is quoted in the hardware trade now at $1.21 per Imp. gallon for raw, and $1.26 for boiled, subject to 2 per cent. off and 30 days. A complete report on oils and paints will be found in the weekly paint market report.

Copper Has Added More Strength

COPPER.—The copper market is increasingly firm, and is going stronger every day. Quotations in Montreal were being made at 37½c to 38c per lb., and with the increasing export demand in the United States, and uncertainty as to the productive capacity of the market on this continent, the outlook is for very firm conditions throughout 1917. Predictions have been made that the average price for copper during 1917 will be around 25c to 30c a pound in the United States, and correspondingly firm in Canada. Already copper goods show the steady trend of prices for the metal.

Soldering Coppers Up



Soldering coppers are priced now as follows in Montreal:—1 lb., 72c; 1½ lbs., $1.05 2 lbs., $1.35; 2½ lbs., $1.65; 3 lbs., $2; 4 lbs., $2.60; 5 lbs., $3.25; 6 lbs., $4; 8 lbs., $5.25.

Copper Wire Advances

In line with the general state of the market for copper is also the advance of 10 per cent. on all lines of copper wire, an advance which is recorded in Montreal hardware circles this week.

Lead, Tin and Spelter, Etc., Firm

OTHER METALS.—Great firmness is noticed in almost all lines of ingot and sheet metals at present, and there is dif-

—*Williams, in the Indianapolis News.*

FINE! BUT WHAT'S THE NEXT ACT?

—*Brinkerhoff in the New York Evening Mail*

GO IT

ficulty in securing delivery of many lines.

Lead is Stronger

Unchanged in price from last week, lead is still in stronger toned market. Few producers seem to want to make contracts in this metal at present. Prices vary from the lowest quotations at $8.53 per 100 lbs. to $9.75.

Tin Very Strong

Tin is in very strong market, with quotations for Lamb and Flag (English) at 43c, and Straits tin at 44c Montreal, with quotations running also as high as $48 to $48.50 per 100 lbs. on the Montreal markets.

Spelter Stronger

A stronger tone and higher quotations are noticed in spelter. Recently there was a slight advance in the prices of the ore, and the market is responding. From $14.50 to $15 is quoted in Montreal to the trade interested. It costs about $11.50 per 100 lbs. to lay the metal down in Montreal in bond, according to opinion of men in touch with the metal markets.

Antimony Steady

Quoted as last week at about 16c per lb., antimony is in slightly better market. Some scarcity is suspected as regards this metal, and an increase in price is anticipated in the not very distant future.

Aluminum Firm

Aluminum is in firm market, No. 1 Virgin costing 66c per lb. at shipping point U.S.A. Pure 98 and 99 per cent. re-melted are at 60c, and the alloy re-melt is quoted at 47c.

Solders Firm

Solders, both tinsmiths' and wiping, are quoted as last week at 30c for tinsmiths' and 28c for wiping solder.

TORONTO MARKETS

TORONTO, Nov. 17.—The week has turned out to have another extra heavy grist of price advances. One lone instance of a decline is recorded in large jute twine. Declines are very exceptional occurrences these days. Business during the past week has held good, although withal wholesalers consider the present unsettled state of the market, with ever advancing prices, a most unsatisfactory and trying one. The old problem of getting sufficient goods to fill orders is ever with the jobber.

American Ammunition Makers Advance Prices

AMMUNITION.—Canadian jobbers were advised during the week by American ammunition manufacturers that the prices have been advanced 10 per cent. on all lines. All present lists are cancelled, but the new ones will go into effect immediately. It is expected the new lists will be in the hands of the wholesalers in Canada in the near future

Lawn Mowers and Other Lines to Advance

SHELF HARDWARE.—One of the large Canadian manufacturers, the Taylor-Forbes Company, of Guelph, has advised the trade of the withdrawal of present prices on their entire line. It is expected the advance will range from 5 per cent. to 20 per cent. The lines manufactured by this concern are numerous, and include such things as lawn mowers, tree pruners, spring hinges, sap spouts, door buttons, thumb latches and other lines of builders' hardware. New prices are expected in the near future.

Cotton Goods Again Go to Higher Levels

TWINE AND ROPE.—Dealers during the week announced a further advance in cotton wrapping twine, cotton sash cord and cotton rope. In the instance of the cotton wrapping twine the advance amounts to 2c per pound. In the 3-ply it is now quoted at a range of 34½c to 44½c, while the 4-ply is quoted at 37c to 38c per pound. For the 5-ply and up the price is 37c per pound, and for the variegated 41½c.

Cotton rope prices have the following range, according to the new lists issued: One-eight inch, 40c to 45c; 5-32, 39c to 42¾c; 3-16, 36½c to 40c; ¼ inch and up, 35c to 38¾c.

Sash cord has also shared in the advance. No. 6 is quoted at a range of 44½c to 45c; No. 7, from 43½c to 44c; Nos. 8, 9, 10, 12, from 43c to 43½c. The ever rising prices in cotton goods are due to the upward trend of the raw cotton market. Twenty-cent cotton, which two or three months ago seemed a goal that might be far in the distance, now has become a reality. Spot middling cotton on the New York Cotton Exchange sold for 20.05c per pound. Some of the future cotton quotations were well above that figure; cotton for delivery in May closed as high as 20.44c per pound. There are those who are freely predicting that cotton will go to 25c per pound, and perhaps beyond. It is now at the highest figure since 1873, one of the lean cotton years following the American Civil War. Between the years 1864 and 1873 the price of cotton ranged between $1.90 per pound in the former year to 21⅜c in the latter year.

Canadian Makes of Builders' Hardware Up

BUILDERS' HARDWARE. — All Canadian manufacturers of builders' hardware have announced another advance of from 5 to 10 per cent. on almost the entire line manufactured. New lists are being issued. The advance amounts approximately to 5 per cent. on iron and steel lines, and 10 per cent. on brass articles of hardware. Hardware composed of steel or iron is now quoted at 35-5 per cent., and wholly or partly of brass or bronze at 33 1-3 per cent. Yale padlocks have been advanced another 5 per cent., and Yale night latches have gone up 10 per cent.

Further advances have also been recorded on all lines of harness hardware, both for the Canadian and American goods. These include such articles as snaps, rings, buckles, hooks and eyes, etc.

Building Papers Make 25 Per Cent. Advance

BUILDING PAPER.—Building paper again advanced, due to the advances put into effect from the manufacturers of the paper. Dry fibre No. 1 is now quoted at $1.20 per roll, as compared with the previous price of 95c. Dry fibre No. 2 is now selling at 60c, whereas the former price was 50c. Tarred fibre No. 1 is now quoted at $1.25, and tarred No. 2 at 70c per roll, an advance in the first instance of 20c per roll, and in the second 12c per roll. Surprise fibre is now quoted from 64c to 70c. Asbestos sheeting is now quoted at $4 to $4.75 per 100 pounds. This also represents an advance.

Well-Known Cutlery Line Advances Higher

CUTLERY.—Wholesalers were advised during the week of an advance of 10 per cent. on all lines of the Rogers cutlery. As an instance of the way the advance has affected the price, a butcher knife that formerly sold for $3.29 per doz. is now quoted at $3.84. Another line of butter knives formerly quoted at $6.23 is now selling at $7.12. Other lines of this make of goods are advanced correspondingly.

Jute Twines Only Line to Register Decline

CORDAGE AND TWINE.—A decline of 2c per pound was recorded in the price of large jute twines during the past week. This is the one exception to the general rule of advancing prices to chronicle during the week. For this reason it stands out like a brilliant star in the firmament. In ton lots the 96-lb. 4-thread jute twine is quoted at 13c per pound, and in less than ton lots at 14c. For the 72-lb. 4-thread the price is 13½c in ton lots, and 14½c in less than ton lots. One lea 4-thread and over is now listed at 14c in ton lots and 15c in small lots. The usual extras for small sizes. The prices of other cordage are holding firm. First grade Manila rope is quoted on a basis of 22½c, and New Zealand hemp rope at 18c per pound for basis of ⅝ inch. Demand for cordage is seasonably good.

Ceiling Plates Show An Advance of 50c

ROOFING AND CEILING.—An advance of 50c per square has been put into effect on metallic ceiling plates, which now makes the price $4.50 per 10 square feet. A corresponding rise has taken place in cornices, mouldings, etc. Shingles are quoted at $6.70 per square and galvanized siding at $5.50 per square. Standard siding is quoted at $4 and the ordinary painted siding at $3.75. Dealers have already commenced booking orders for delivery on these goods to be made March 1. This is unusual, as orders are usually not placed until after the first of the new year. The reason is stated to lie in the fact that some dealers have considerable stock on hand, and they are having little difficulty in disposing of it in view of the fact that higher prices would not be improbable.

HIGHER PRICES ON LADDERS.

All ladders, including, step, common and roped extension, fire, and fruit picking ladders have advanced 1c per foot. New prices are given below:

Stepladders	
Shelf Lock	14c foot
Ontario	18c foot
Faultless	22c foot
Mechanic	27c foot
Hercules	25c foot
Perfect	24c foot
Faultless, extra heavy	27c foot
Hercules, extra heavy	30c foot
Mechanic, extra heavy	32c foot
Crescent	17c foot
Household	13c foot
Standard	20c foot
Electrician	26c foot
Heavy duty	46c foot
Extension	24c foot
Common and Roped Extension Ladders	
Up to 32 feet	17c foot
34 to 44 feet	19c foot
46 to 60 feet	26 to 30c foot
Single and Fruit Picking	
8 to 16 feet	13c foot
18 to 22 feet	14c foot

Iron Pipe and Ladders Go Higher

IRON PIPE.—In accordance with predictions made by HARDWARE AND METAL for some time past, iron pipe has again advanced. One advance on lapweld pipe was announced last week. Another one has taken place this week, as well as an advance on buttweld, in both black and galvanized. The new net prices are shown in a panel elsewhere in this issue and in the current market quotations.

Pump Rods Advance

Pump rods have advanced in price, and are now quoted as follows:—Small quantities, $6.30 per 100 lbs.; 500 lb. lots, $5.80 per 100 lbs.

Step Ladders Advanced

All step ladders have advanced 2c list, or 1c net per foot. This change affects all makes. New prices on various brands are shown in the current market quotations.

Extension Ladders Advance

An advance of 1c per foot has been made on all common and roped extension ladders. Fire ladders and single ladders also share in the advance. New net prices are shown in the current quotations.

Porcelain Door Knobs Up

A 10 per cent. advance went into effect on porcelain door knobs during the week. In the japanned mountings the price is now $1.50 per dozen and nickel-plated mountings $3.

Sandpaper Advances

Another advance has been announced on sandpaper and emery cloth. This advance was predicted in last week's issue. The new discount for B. & A. sandpaper is now 5 per cent., with the same per cent. discount on B. & A. emery cloth. In the cheaper grades there are corresponding advances in all lines.

Conductor Pipe May Advance

Dealers in conductor pipe are expecting an advance in the various sizes in the near future. At the time of going to press these advances had not been recorded. It is now quoted at 45 per cent. off list, which will be found in the current quotations.

Nails Holding Steady

Wire nails are holding steady at the advances recorded last week. Standard steel wire nails are quoted at $4.10 base, and cut nails at $3.70 base. There is a firmness in the market under present conditions.

Wrought Washers Up

An advance in wrought washers went into effect during the week by the changing of the discount from present list prices. The discount is now 20 per cent. instead of 25 per cent. formerly.

Whisk Brooms Up 5 Per Cent.

One of the Canadian manufacturers of whisk brooms this week advanced their line approximately 5 per cent. This advance is in sympathy with the higher prices in brooms of all kinds. On brushes most of the manufacturers issue their new price lists around January 1. It is expected the new lists will show increased prices over the quotations issued at the first of last year.

Big Ben Clocks Advance

An advance has taken place in Big Ben clocks during the week. The new price is now $2.40 each. The selling price to the consumer has been placed at $3.50, as compared with $3 formerly.

Whips Make 25 Per Cent. Advance

An advance on all lines of whips from Canadian manufacturers went into effect during the week, which provides for an increase price of approximately 25 cent.

Wrought Butts and Hinges Up

Dealers have been advised of an advance of 10 to 15 per cent. on wrought butts and tee and strap hinges, to take effect immediately. New discount sheets are expected to be issued shortly. An advance is expected on rivets and bolts in the near future.

Malleable Fittings Prices Off

All prices on malleable iron fittings were withdrawn this week, and dealers take it as an indication that new and higher prices will shortly be forthcoming.

Galvanized Fence Wire Follows Upward

FENCE WIRE.—All sizes of plain galvanized wire have advanced in price, following the upward trend in other wire products recorded in last week's issue. The advance locally amounts to 15c, the same as that on other wire products. Following the new prices:—

	Per 100 lbs.
Nos. 6, 7, 8	$4.75
No. 9	4.05
No. 10	4.80
No. 11	4.85
No. 12	4.20
No. 13	4.30
No. 14	5.20
No. 15	5.80
No. 16	5.90
No. 18	8.00

Coil spring wire, No. 9, has advanced to $4.05 and No. 12 coil spring to $4.25.

Ready Roofing Again Records an Advance

ROOFING.—Advances of from 5c to 10c per roll were recorded in the Cornet and Pluvius brands of ready roofing. The former brand is now selling at $1.10 per roll for one-ply the former price being $1.05. In the two-ply of the same the price is now $1.40. In the Pluvius brand the price is now $1.35 for one-ply and $1.80 for two-ply.

Enamelware Goods Still Scarce Articles

ENAMELWARE.—All manufacturers of enamelware, japanned ware, pieced tinware and stamped tinware are short on deliveries. They are unable to get the raw materials to supply their needs. "It is harder to get goods than business," said the salesmanager of one concern. This about fits the case in many lines. Enamelware remains firm in price at the advances recorded last week. Dealers are not hesitating about buying the goods. It is a question of taking them at the prices named without any twangs of conscience.

Metal Markets Are Very Firm

The principal feature of the metal markets is the continued strength of copper due to heavy demand and great scarcity of nearby metal. With regard to other metals, prices have been well maintained and the situation generally unchanged. Business locally is very good, principally on account of the heavy demand for munitions but ordinary business is keeping up well. The local market is unusually steady and outlook favorable.

COPPER.—The fact that there is very little copper to be had for at least three or four months has created a nervous market and there is an indication that prices will advance in the very near future. Local prices are nominal and unchanged at 30-31c.

TIN.—There is a fair demand for tin at the present time, but the market is strong at unchanged prices. Local price 47c per lb.

SPELTER.—The spelter situation is improving and the market more active. Dealers are still not anxious to sell believing that prices will go higher. The report that consumers are pressing the covering of requirements. Local quotations are firm and unchanged at 13-13½c per pound .

LEAD.—The market is fairly active but there is no pronounced change in the situation. Producers are awaiting a revival in the demand. The leading interest continues to quote 7c New York. Local price 9¼c per pound, firm.

ANTIMONY.—A little firmer tone has been noticed in the market and a fair amount of business has been done recently. Antimony is unchanged at 18c per pound, steady.

ALUMINUM.—The market is steady and quiet with no change in the situation. Local quotation 68c per pound.

SOLDERS.—The market is stronger and prices have advanced ½c per lb. Guaranteed is now quoted at 30c and strictly is 28c per pound.

LONDON MARKETS

LONDON, Nov. 16.—Prices continue to move rapidly upwards. There is no sign whatever of the present movement nearing an end. The demand for steel is as insistent as ever, and fancy prices are being paid for prompt deliver. A special article elsewhere in this issue gives details regarding the present outlook for iron and steel. Business here is good. The advent of cold weather has stimulated the demand for fall and winter lines. A large number of price changes have taken place this week.

Building Paper Goes Still Higher

BUILDING PAPER.—New and higher prices have been issued on building papers and quotations are now as follows:—Dry fibre No. 1, $1.20 roll; Dry fibre No. 2, 60c roll; Tarred fibre, No. 1, $1.25 roll; tarred No. 2, 70c roll; surprise sheeting, 64c roll; risen sized paper, 65c roll; oiled sheeting, $1.60 roll.

Iron Pipe and Ladders Advance

Iron Pipe Goes Still Higher

IRON PIPE.—In accordance with predictions made by HARDWARE AND METAL for some time past iron pipe has again advanced. One advance on lapweld pipe was announced last week. Another one has taken place this week, as well as an advance on buttweld, in both black and galvanized. The new net prices are shown in a panel elsewhere in this issue and in the current market quotations.

Pump Rods Advance

Pump rods have advanced in price and are now quoted as follows: Small quantities, $6.30 per 100 lbs., 500 lb. lots, $5.80 per 100 lbs.

Step Ladders Advanced

All step ladders have advanced 2c list or 1c net per foot. This change affects all makes. New prices on various brands are shown in the current market quotations.

Extension Ladders Advance

An advance of 1c per foot has been made on all common and roped extension ladders. Fire ladders and single ladders also share in the advance. New net prices are shown in the current quotations.

Many Sundry Lines Advance in Price

Rodgers Cutlery Up 10 Per Cent.

Rodgers butcher knives and table cutlery have advanced about 10 per cent.

Chains Go Higher

Dog and halter chains have advanced 10 per cent.

Curry Combs and Whips Up

Buggy whips have advanced 10 per cent. Curry combs have also advanced, the new discount being 12½ per cent.

Sash Cord and Rope Up 2c

Sash cord shows another advance of 2c lb. and is now quoted as follows:—No. 6, 44½c lb.; No. 7, 43½c lb.; No. 8, 9, 10, 12, 43c lb.

Cotton rope has also advanced 2c per pound and the new price follows: 3-16, 37c lb.; ¼ in. and larger, 36c lb.

Cotton Twine Advances

Another advance has been made in the price of cotton twine and the new and advanced price is:—3-ply, 42c lb.; 4-ply, 45c lb.

Iron Washers Go Up

Wrought iron washers have advanced and the new discount is 20 per cent. off instead of 25 per cent. as formerly.

Agricultural Wrenches Advance

An advance of 10 per cent. has taken place on agricultural wrenches.

Stove Pipe Elbows Up

Light pattern stove pipe elbows have advanced in price and are now quoted as follows:—5 in. $1.45 doz.; 6 in. $1.45 doz.; 7 in. $1.60 doz.

Advances on Builders' Hardawre

An advance has taken place on Canadian hardware lines and goods composed wholly of steel or iron are now quoted at 35-5 per cent. Hardware composed wholly or part of brass or bronze is now quoted at 33 1-3 per cent. off list.

Porcelain jet and mineral knobs formerly quoted at $1.40 doz. are now quoted at $1.50 doz. Cheap rim locks are now quoted at $1.75 doz. Cheap inside lock sets are now quoted at $6. doz.

Linseed Oil Goes To Higher Levels

An advance of 8c per gallon has taken place in the price of linseed oil. This will not come as a surprise to those who have been following HARDWARE AND METAL'S paint market reports of late. The market is firm and further advances are not unlikely. The new prices are as follows:—

	Raw	Boiled
1 to 2 barrels ....Per gal.	$1.20	$1.23
3 to 5 barrels ....Per gal.	$1.19	$1 22
6 to 9 barrels ....Per gal.	$1.18	$1.21

Turpentine is firm and unchanged and is quoted in single barrel lots at 74c per Imperial gallon in single barrels; 2 to 4 barrels are quoted at 73c per Imp. gal.; 5 gal. lots 81c per Imp. gal.

White lead in oils remains firm at $13.95 per 100 lbs. in ton lots and $14.25 per 100 lbs. in less than ton lots.

Fence Wire Unchanged

Galvanized fence wire remains unchanged locally and is quoted as follows:—Barb, $4.25 per 100 lbs.; No. 9 plain, $3.90 per 100 lbs.; No. 12 plain. $4.05 per 100 lbs.; No. 13 plain, $4.15 per 100 lbs.; No. 9 coil spring, $3.95 per 100 lbs.; No. 10, O. & A., $4.56; No. 11, $4.62; No. 12, $4.70; No. 14, hay baling in coils, $4.80.

Putty In Fair Demand

Putty is in fair demand and is firm and unchanged. Quotations are as follows:—Standard 100 lb. drums $3; 25 lb. drums $3.10 per 100 lb.; pure 100 lb. drums $3.70 per 100 lbs.; 25 lbs., $3.80 per 100 lbs.

Glass Is Firm

Sheet glass is firm and is in good demand. Single diamond is quoted at 20 per cent. off; double diamond at 20 per cent. off; cut lights at 50-5 per cent. off.

Snow Shovels Advance

New prices have been issued on Jones' snow shovels as follows:—Jones No. 20 socket L. H., $5.04 doz.; No. 4 socket D. H., $7 doz.; No. 50 socket D. H., $9.80 doz.; Olds house furnace scoops, $5.25

WINNIPEG MARKETS

WINNIPEG, Nov. 16.—Continued activity is to be noted in the various markets, and late advices last week included the following items:—Wire nails, annealed wire, bale ties, tinners' wire, staples, galvanized and black sheets. Nearly all of these items were included in the report of advanced prices for the preceding week, and carry out prediction made at that time that higher levels would undoubtedly be reached.

In addition to the above items, which are reviewed below, changes are also noted for the week in tin plates, terne plates, cotton rope, sash cord and linseed oil, as well as several minor lines. The records for the week are as follows, reviewing the late activities of the previous report first:

Galvanized and Black Sheets Advance Sharply

Perhaps the greatest change was that affecting galvanized sheets. This sharp advance follows a revision in price, on which some gauges were reduced, while others advanced. All sizes now show a decided increase over preceding figures, as noted in quotations given below:—Premier, Apollo and Fleur-de-Lis (per 100 lbs.)—10¾-gauge, $7.50; 28, $7.30; 26, $6.90; 24, $6.70; 22, $6.70 20, $6.50; 18, $6.50.

The advance noted herewith on black sheets, though not as sharp as that on galvanized sheets, follows increased prices issued two weeks ago, with the result that the revised quotations on each show about an even jump. The market is very strong just now, and though local demand is only fair, advices from the manufacturing centres indicate large sales are being made, with deliveries only fair. To-day's prices on black sheets are as follows (per 100 lbs.):—28 gauge, $5.25; 26, $5.15; 24 and 22, $5.05; 20 and 18, $5; 16, $5.60 14, $5.50; 12, $5.60; 10, $5.55.

Advance of 15c Per 100 lbs. on Wire

The further increase of 15c per 100 lbs. in the price of annealed wire, tinners' wire and bale ties has resulted in these lines, reaching decidedly high levels. In spite of high prices, however, the demand is normal for this season of the year, and indications are that sales will continue up to the usual mark. The revised quotations are as given below:—Bright Tinners' Wire (per 100 lbs.)—0-9 gauge, $4.95; 10, $5.01; 11, $5.07; 12, $5.15; 13, $5.25; 14, $5.35; 15, $5.50; 16, $5.65. Annealed Wire (per 100 lbs.)—9-gauge, $4.75; 10, $4.80; 12, $4.95; 14, $5.10; 15, $5.25; 16, $5.40. Bale Ties—14 ga. x 9½ ft., Fort William $5.30; Winnipeg $5.70.

The revision in wire nails and staples is also worthy of note, for to-day's prices create a new record. To-day's quotations are being made on the following basis: Wire nails, Fort William $4.15; Winnipeg $4.55 per keg base; staples, Fort William, $4.25; Winnipeg $4.65 per keg base.

Linseed Oil Goes To Higher Levels

During the past week the much-talked-of $2 wheat was reached on the Winnipeg Grain Exchange floor, and, in sympathy with this grain, others increased as well, notably flax, with the result that we have another big jump to record in the price of linseed oil. To-day's prices are 8c higher than those formerly prevailing, with the result that quotations now made are on this basis:—Raw, $1.39 per gal. in bbl. lots; boiled, $1.42 per gal. in bbl. lots.

There has been no change as yet in the price of turpentine, and quotations are still being made at 80c per gal. in barrel lots.

Tin and Terne Plates Advance in Price

Perhaps the line to show the greatest advances during the past two or three weeks is tin plate and terne plate. Another big advance is in evidence in the prices below, following as they do two recent advances of no small proportions. Best quotations to-day are herewith noted:—Tin plates—20 x 28 I.E., $17 per box; 20 x 28 I.X., $18.50 per box; 20 x 33 I.C., $19.50 per box. Terne plates, $14.50 per box.

Advance Made on Cotton Goods

The high price prevailing in the price of raw cotton has resulted in further advances being made in lines carried by the hardwareman. Noted in the price below will be seen new figures for cotton rope, sash cord, wrapping twine and

(Continued on page 50.)

EVENTS IN THE TRADE

Business Changes

Winnipeg, Man.—Mainer Electric Co. has had the firm name changed to the Dominion Electric Co., Ltd.

Liberty, Saskatchewan.—H. F. Smith & Co., hardware merchants have discontinued business.

Oxbow, Sask.—R. Gillespie, of Dominion City, has purchased the hardware business of Crossley & Johnston, Oxbow, Sask.

Saskatoon, Sask.—J. L. S. Hutchinson has purchased the interest of O. B. Manville, in the Saskatoon Hardware Co., Ltd., and is now the sole owner.

Dominion City, Man.—The hardware business conducted by R. Gillespie, at Dominion City, has been sold to C. B. Whitman, of Emerson, Man.

Stove Co. Changes Hands

The A-B Stove Company of Canada, Limited, of 323 Aird avenue, Maisonneuve, Montreal, P.Q., have disposed of their entire business and plant to the Canada Stove & Foundry Company, Limited, Ville St. Laurent (near Montreal), P.Q.

The Canada Stove & Foundry Company, Limited, have just completed the erection of several new buildings to their present plant to accommodate the space required for the manufacture of gas ranges.

The "A-B" line of gas ranges will continue to be manufactured and sold by the Canada Stove & Foundry Company, Limited.

W. O. Henderson, who has had full charge of the business of the A-B Stove Company of Canada, Limited, during the past five years, will have charge of the Sales Department, and continue to look after the details of manufacturing gas ranges. It is intended that in the very near future an entirely new line of gas ranges will be ready for the market, which will be known as the "Royal" line, and also be manufactured by the Canada Stove & Foundry Company.

Personal Notes

Joseph Wilfred Charbonneau, Montreal, hardware has registered.

M. F. Christie, of G. F. Stephens and Co., paint and varnish manufacturers, Winnipeg, has been re-elected treasurer of the Red Cross Society in that city.

Geo. N. Jackson, Winnipeg manager for Walter Woods and Co., delivered an address before the Sales Managers Association at the Fort Garry Hotel, Winnipeg, on Nov. 15, based on his recent trip to England.

New Firms

Medicine Hat, Alta.—Hewitt & Black have opened a branch store at Orion, Alta.

Incorporations

McKelvey & Birch, Ltd., capitalized at $50,000, head office, Kingston, Ont., to conduct a plumbing, heating and tinsmithing business, etc.

Obtained Charters

The Foundry Products Co., Calgary, Alta., has obtained a charter.

The Dominion Fire Brick & Clay Products Co., Ltd., has obtained a charter.

WHEN WILL IRON AND STEEL PRICES DECLINE?

(Continued from page 38.)

have been made at high prices and many merchant furnaces have now only a very small portion of their 1917 output to offer. The movement was of startling suddenness. Three or four weeks ago some furnaces refused to consider iron for the second half of next year. Since that time the output for that period has been rapidly taken up.

Steel Sheet Situation

A Canadian authority on steel sheets recently visited the mill districts in the United States in an endeavor to find out just what conditions prevailed. It was found that labor in the mill district is not only scarce, but a large part of it is now inefficient, due to the mills having imported a lot of blacks from the South, and many of the colored men have proven themselves very averse to labor.

Coal which is generally purchased around $1.05 to $1.15 per net ton, run of mine, delivered at steel plant is now $3.75 to $4.50. Coke which sold a year ago for $1.50 Connelsville, is now $6.25. Sheet bars which sold a year ago at $23.00 per ton, are now almost impossible to buy at $45 to $50. Spelter which was down to 8c has again advanced to figures around 10¼c to 11c in hundred ton lots, East St. Louis. Black sheets advanced $10 per ton last month, and it is freely predicted in the mill district that galvanized sheets, carload lots, will be selling next spring for $7 base, No. 28 at Pittsburg, which will be equal to $8.10 Hamilton or Toronto. Some authorities claim that the prices which the trade will have to pay next spring, will make present prices seem trifling by comparison.

The American metal market referring this week, to conditions in iron and steel in the U.S., states that production is the chief item of interest. It states in part:

"The great item in the iron and steel market is the prospects for production. Of entirely secondary importance are the usually important items, what are prices doing and how are the producers sold up. No producer cares a great deal at this time how much he is sold up, except in the case of those who would be very glad if they were not sold up so much. The duration of this period of feverish activity is not to be measured by the amount of tonnage on the books of producers, whether of pig iron or steel, for the common expectation is that the limit will be found to be the war. The market may suffer an accident before that time, but that is hardly expected. The state of order books in general, judged by the usual standards, worth very little at a time like this, however, would suggest another twelvemonth of full mill activity. Perhaps it is merely a coincidence that the more common appraisement in the steel trade is that the war will last another twelvemonth.

Prices Uncertain

"As to prices of steel there is much less interest than there was. There are no clear cut market prices any more, at least for the majority of commodities. Even mills that hitherto have had one flat price, and sold or did not sell at the price, usually the former, when business was offered, now have more than one price or do not have any definite price at all, but make up a price when the prospective buyer presents such a case that it is considered necessary to sell him. In wire products the so-called "official" prices, as ad-

Group photo of managers and salesmen of Brandram-Henderson Company who met at the Eighth Annual Convention of the Company in Montreal on October 26, 27, 28.

vanced $3 a ton a week ago, are practically as near being nominal as were the prices that preceded. In tin plate the various mills have been selling, with scarcely an exception, only to their regular customers, and a week ago the leading interest withdrew from the tin plate market entirely.''

The outlook at present is certainly for continued high prices on iron and steel goods. No authority can tell when or where the limit will be reached. One guess is about as good as another.

STOVE MAKERS TAKING SMALLER PROFITS

(Continued from page 36.)

at that time. Whether there is to be another increase due to the extraordinary upset in the metals market, and phenomenal advances in iron and steel, of which indispensable base metals there is already a scarcity, is not to be predicted at present. An increase is believed to be justified by conditions, but the manufacturers have bought pretty far ahead and, as already pointed out, there is a strong opinion that the prohibitive price in stoves can be reached without any seven-league stride ahead of present prices. It is possible that even if iron and steel go still firmer in the future, the stove manufacturers will be inclined to ''grin and bear'' decreased profits rather than reduce the movement of their product from factory to consumer.

Factors in the Increase

Besides the higher railroad rates, the increased cost of packing materials, the enhanced price of labor, and the incidental increases which always accompany a period of rising staple prices in any country under the sun, the accompanying panel showing particular percentages of increase shows the startling effects of the European war and the conditions it created on this continent upon the market for materials used in the manufacture of stoves and ranges. These percentages have been obtained after enquiry over a considerable range of sources, and are believed to be fairly representative of the true state of affairs at present in the market for the materials mentioned. That still further increases rather than reductions in the prices of these materials may be in store is felt by watchers of the markets today. At the same time some doubt has been expressed in some directions on the market for stoves to the effect that present prices may rise a little more, but that further increases should be regarded with suspicion in anticipation of a slump later on.

ACCESSORY JOBBERS' ASSOCIATION TO HELP TRADE

(Continued from page 33.)

ation as outlined in the constitution are as follows: To obtain a closer relation between its members who are engaged in jobbing of automobile accessories, or who may subsequently become members hereof, to collect, collate and disseminate information of interest to the trade and the adjustment of slow and bad accounts, and in all lawful ways to secure mutual co-operation and benefit, to promote the welfare and interests of the members hereof, and the bettering of trade conditions in this line generally.

''To the manufacturers a real service is given in that it is the policy to co-operate with them in advising of the best methods in which to put up their goods. For instance, at the last convention at St. Louis it was recommended that all manufacturers use due care in packing their goods in order that they may reach the purchaser in full saleable condition. It was also recommended that for brake lining a standard 50-roll for delivery to the jobber be used. In the matter of canned goods, it was recommended that cements, enamels, radiator compounds, carbon remover, etc., should come in unit packages of ¼, ½ and 1-pint tins, one dozen to a unit, with larger sizes six or less than a unit.

''In the matter of bankruptcy stocks, it was recommended to the manufacturer that whenever a considerable quantity of said manufacturer's product is offered for sale at below prevailing market prices for such merchandise, for the purpose of closing out or liquidating a stock, the manufacturer offer to purchase said merchandise of his manufacture as is offered, if in saleable condition, to avoid having thrown upon the market a quantity of such goods and demoralizing trade conditions.

''The habit of some jobbers not adhering to terms of sale works hardships on the manufacturer. It was therefore decided that the buyer adhere strictly to the purchase terms, whether these terms include a cash discount or are net,'' said Mr. MacWilliam.

In the United States, it is claimed, the organization represents 90 per cent. of the buying power of the automobile accessory industry.

COST OF PRICE-CUTTING

Says Paul H. Nystrom, an expert in business economics: If the consumer were only wise enough to limit his purchase to the goods that are cut in price for the purpose of drawing trade, and did not buy other goods on which a large profit was made, the price-cutting dealer would soon go out of business. The purpose of price-cutting would thus prove a failure. This predatory price-cutting causes the regular or non-price-cutting dealers of the community to throw out of their stores the articles on which the price has been cut, and finally the price-cutter quits handling the article, because it no longer has the power to draw trade and the consumer is then deprived of all opportunity to procure it. In the long run the consumer not only gains nothing by predatory price-cutting but useless expenses are added which we must meet in one way or another.

Business Changes

Guelph, Ont.—The Blue Hardware is giving up business.

Personal

T. A. Anderson, president of Merrick-Anderson Co., Ltd., Winnipeg, who was stricken with a serious illness two weeks ago, is reported somewhat better, although still weak.

THE JUNIOR CLERK'S PAGE

"HALLOA," I said. "What on earth are you doing here?"

"Scout!" said Jimmy, laconically.

"Scout!" I repeated, mystified and staring at Jimmy, who was tenderly rearranging a display of accessory articles just then.

Jimmy was always mystifying people. I hadn't seen him for a year, and he was in the East then, selling on the road for a firm of Montreal jobbers. It was like him to pop up here and still be selling, of course. He wouldn't have been Jimmy if he hadn't been selling. It was the very breath of life to him and he made the game pay. He could make a selling proposition do everything but talk. He had a weird genius for taking it apart, viewing each part from every angle, arranging them all in their chronological order for smashing good argument that carried its own talking point—whether the display of the idea was made in a letter or a window. Weird was the only name for it.

"What do you mean by a scout?" I persisted.

"Scoutin' out prospects," he elucidated and then shutting the show case to as gently as though he was locking up eggs, he sidled around to the end and leaned up against it, grinning cheerfully at my puzzled look.

"You want to know?"

"I certainly do."

"All right. I'll tell you."

Bursting His Shell

"In the first place, I've no kick on the old firm. I had some ideas I think they were foolish not to have used. I put them up to the boss, but he said he didn't like the idea of an understrapper like me butting in on the management of the firm. I'm sure some of those ideas, a few of them, at least, would have made money for him, and for me, too, if he had let me go ahead. But he didn't, so I began to keep my eye peeled for some place where the hot flame of my young genius could properly blaze without burning people's fingers and hurting their feelings.

"I found it right here. The man who owns this store was one of my customers. As you know, we're in a good prosperous community here, nearly ten thousand people, and a good farming country all about. My first trip in here I came over by hired auto from Toronto so as to save waiting over until morning. It was dark when we arrived at the edge of the town; the chauffeur was careless on a wet piece of road, skidded into a tree and smashed one of his lamps.

"On the Job."

"I wouldn't have thought any more of it beyond remembering his clumsiness, if he hadn't started to swear and go on about having to go home in the dark. I asked him what he was getting at and he explained that he would have to crawl home in the dark because there was no chance of buying a new lamp until he got back to Toronto, as it would only make the trip more dangerous to have the lamp burning on one side and none at all on the other.

"That seemed strange. It set me thinking. I sold the boss here a bill of goods and when we had finished up I asked how it was that the auto man couldn't get a lamp in the town. He told me that there had been a garage here, but that the owner, or, at least, the man to whom the bills were sent and who called himself the owner, had gotten into trouble and flown the coop, in consequence of which a broken down automobile could find no place in the town for the replacing of its broken parts.

Looking the Field Over

"I stopped over the next day and took a squint around. What I saw convinced me. The people were prosperous and looked to be comfortable livers and good spenders. I found out that there were fifteen cars in town and more ordered and that although there were a number of hardware stores, that the only real competition was imaginary and rested entirely upon the number of stores in the town for any claim to be competition at all. I lounged about some of the stores and found out that my auto man was right. None of them carried auto accessories, because they had heard somebody else was going to open up the garage. Of all the fool reasons! Also, I noticed that the same lack of attention to opportunity existed in some other specialty lines; only one store carried vacuum cleaners, only one electrical goods, and none of them pushing any line hard. It seemed to me there was a lot of trade going to waste in this town for lack of development.

Home at Last

"At last I had found a place for my ideas to run loose and play in without tramping on some one else's toes.

"So I came to the store and made an open and shut proposition to the boss. He was to stock up on some of the lines I have just mentioned and I was to work here on a merely nominal salary and get a commission for any sale I could make outside the store and a small one on any of the specialty lines sold in or out. The salary was to cover my work on general lines, although I was to devote myself largely to the special lines."

"Did you find it hard to convince him?" I asked.

Pointing Out Neglected Possibilities

"No. He jumped at it when I presented my lay-out to him. Especially when I pointed out to him that that was how I would make my sales, by pointing out latent possibilities to people. The only knockers on the proposition were two of his competitors and the two clerks here. They all thought it was a good joke."

The Finale

"What happened?" I queried.

"What happened?" he laughed. "I'll tell you what happened. I am cleaning up nearly as much for the boss and myself on my department as he makes out of all the rest of his business. We make a complete turnover in some lines monthly and in the worst of them we've turned over three times in this year. In the expensive lines and slow ones, we don't need the turnover to break even, for we sell by catalogue and send to Toronto for our orders as we sell. It's like falling off a log.

Laying His Wires

"The first thing I did while our stock was coming in was to get acquainted with people. I called on all the car owners and handed out a line of live talk to them, so that most of them come here for their auto supplies. Some of them were hardware customers before, but now all of them buy a little hardware here as well."

"Where does the scouting come in?" I asked.

"Oh, that-" he laughed. "That's my pet name for it. I keep cases on every unpainted barn and every building eligible for improvement in the town. Scout

'em out and tell the owner about some possibilities he has overlooked. I chase up all the doings in the town and get the prinicpals, if my knowledge of their affairs leads me to suppose that they are going to be in the market for any of my pets. I sometimes develop a good customer out of the man who had no idea of buying anything, by just showing him that he is losing money by neglecting his opportunities.

An Endless Chain.

"The scheme works like an endless chain. Every sale, every talk, every fresh effort, opens up to me new possibilities and fresh veins of good workable ore in a natural and neglected mine. If it was in Timbuctoo, it would have been grabbed long ago. Being right under their noses they passed it up until I showed them the way. They're all scrambling after these lines now, but I have the start of them by a year for the cream of the trade and I'm going to keep hitting the ball so hard it'll make em dizzy to watch it spin.

The Japanese Trade Expansion

Dearth of Enemy Goods Forces Expansion of All Branches of Manufacturing in Japan —Trend to Canada as Future Outlet in Hardware and Other New Lines— Notes on Japanese Activity in Manufacturing

THE requirements of neutral and allied merchants the world over, who have previously depended upon Germany and Austria for certain goods has forced an expansion of manufacturing in Japan that is but little understood in this country. Japanese firms are constantly receiving samples of such goods with requests to duplicate them. As price has become a secondary matter this has had the result mentioned.

Japan Compared to Germany

In the new lines that are being manufactured, certain deficiencies are noted but experience is expected to do away with this feature. It is recalled that the same complaint was heard to an even greater extent in the case of German goods fifteen years ago. To a large extent however Japanese firms are concentrating on their regular lines but with this difference, that whereas formerly they were made for domestic consumption only, they are now made for export.

New Position of Japan

They are now filling all their own requirements and those of other nations as rapidly as they can in the case of many lines of which they were formerly large importers from their Allies as well as the enemy. The present expectation is that these lines will never again be imported from either England or Germany.

Canada a New Market

Australia and New Zealand are already large customers of Japan and both the United States and Canada are rapidly becoming so as a result of the combination of their own needs and the situation previously referred to.

Piece Work Rules

The Japanese workmen are industrious and all classes show great versatility and adaptability. Only two holidays a month are allowed in factory work and these occur on the first and fifteenth of each month. The work is largely done by piece work, especially in hardware manufacturing. The goods are collected by the exporting firm by a house to house canvass of the district given over to certain industries, such as cutlery, or other hardware, silk goods or chinaware. The factories of course specialize in each.

Exporting Firms

As the manufacturers are largely merely a collection of cottage industries, buyers must depend upon having a local representative to assemble and check the goods or else buy direct through an exporting firm which will attend to these details for them. In addition the Japanese cottager or even manufacturer usually requires cash payment before the goods leave Japan which fact further emphasizes the necessity of this method of buying.

Government Bank

Export trade is largely handled through the Yokohama Specie Bank, which is backed by the government and assists in collections etc., for Japanese merchants. The bank deals largely with British exporting firms located in the country who serve as distributors to foreign countries.

This method of doing business is a direct result of the conditions previously mentioned and which have to do with the delivery of the goods. The Japanese merchant is notoriously independable but is rapidly becoming educated by his government to occidental requirements and standards in matters of trade ethics. The practise has been to deliver the goods to the highest bidder on the completion of the order irrespective of who ordered them originally. A case is cited of a Canadian firm advancing the money to expedite the manufacture of a bill of goods which upon completion was sold to an Australian firm that offered more money.

Obsolete manufacturing methods are still in vogue to some extent. The case is mentioned of a Canadian firm which shipped special machinery to facilitate the manufacture of a certain line. Six months afterwards a representative of the firm found the machinery rusting in a creek bed where it formed a rough bridge for the coolies employed in the vicinity. In spite of these disadvantages however the entrance of Japan as a definite factor in the Canadian field appears to be assured.

SCARCITY OF HICKORY

Men whose business it is to keep the golf club makers of this and other countries supplied with timber suitable for shafts, report that first-class hickory timber is becoming alarmingly scarce. With the increase in popularity of golf the demand upon hickory forests has been tremendously increased. The greater portion of hickory comes from eastern and southern states where Uncle Sam controls but little timber land, and while the depletion of the forests of this kind of wood has been called to the attention of Federal authorities there is nothing the National Government can do, except as to land owned by the government. Hickory for golf shafts made in England and Scotland comes from the United States. It is exported in the rough and returned finished product. Hickory is now being cut out much faster than it is being grown, and unless there is a change for the better, the time is not far distant when the cost of golf clubs will be advanced because of the scarcity of hickory suitable for shafts.

Young, Sask.—F. G. Young, hardware and implement dealer is discontinuing hardware on December 1.

WHAT OTHER PAPERS SAY

SHOPPING BY PHONE OR LETTER

(From *Merchants' Record and Show Window*)

The custom instituted some years ago by some of the big department stores, of maintaining during the months just before Christmas, a letter order and telephone order service is becoming more popular and hundreds of the bigger stores have adopted the plan this year .

The object of these departments is to serve the customers who for some reason find it impossible to go to the store, and those who find it difficult to do so. These departments are in great favor with the public and the volume of business done in this manner is surprising.

In the stores where this feature is in use departments consisting of hundreds of clerks are maintained throughout the entire day. The night forces are not so large in number but none the less efficient. Orders may be sent by letter after the supper hour and be ready for shipment the same night and on the way to your home before breakfast the next morning. A telephone order or an order by letter is given the same attention as personal orders.

While these departments are working in the day as well as at night, it is the night forces that are giving the unusual service. These departments are the Godsends to those who cannot leave home after a hard day in the factory.

Another large store features its day and night mail order service.

A certain article is advertised and announcement made that orders are received every hour of the day and night. To show the speed of such a department, this concern tells of the many who sent orders for certain pieces of merchandise but neglected to state the size. To these people letters were immediately sent notifying the prospective purchasers of their error and while the orders were sent after the supper hour letters notifying the senders of their oversight were awaiting them at the breakfast table or at least in the first morning delivery of mail.

All this shows how speedy you can make your department service and in no way are these exaggerated instances. Such departments are great attractions to the busy housewife or working woman, and it is no wonder they have become so popular.

EMBARGO ON GUNS

The exportation of sporting firearms from England was prohibited soon after war was declared, but no attempt was made to prohibit the importation of foreign sporting guns until the latter part of July of this year. There is the usual provision that the ban shall not apply to goods "which are imported under license given by or on behalf of the Board of Trade."

The *Sporting Goods Review and Gunmaker* an English trade paper, says that the effect of the prohibition of sporting firearms will depend largely upon the licenses granted. Since the declaration of war Germany and Austria have ceased shipping guns. No firearms are going to England from Belgium. But there have been immense increases of importations from neutral countries with the lion's share being taken by the United States. Shortages in the supply of English-made sporting guns have furnished splendid opportunities for other gunmakers to get a foothold in England, and when the war ends these manufacturers will not readily give up the new business.

Discussing the effect of the new order prohibiting the importation of sporting firearms The *Sporting Goods Review and Gunmaker* says:

"The stocks already in the hands of the trade may be sufficient for immediate requirements, and it is always within the power of the Board of Trade to grant licenses for further importations should a positive shortage be shown to exist. The future, as well as the present, has to be considered. In the period immediately after the war, the existing scarcity of hands will probably be transformed temporarily into a superfluity, and English gunmakers hope then to regain the ground they have lost. They look forward to starting production on a considerable scale, first to prevent unemployment at a critical juncture, and secondly to keep together the re-assembled staffs. If English retailers are already holding full stocks of foreign firearms, they will not be able to give the orders that would help the British manufacturing trade. Whatever else may happen, it is perfectly certain that if gunmakers cannot get to work when the time comes, other branches of trade, in a position to offer immediate employment, will snap up the skilled labor. The gunworkers will not wait, and if the gunmakers are left in the lurch then, the labor difficulty which was felt before the war may afterwards have disastrous results. While the war continues, there is the further consideration, which weighs heavily in official quarters, that importations necessarily create national liabilities. Military firearms, made for and imported by the British Government, are necessities, but sporting firearms are not. The nation has to pay heavily for foreign military arms, and it is not difficult to understand that, if sporting arms are also imported, the effect must be to increase the bill.

JARRING THEM LOOSE

From *Hardware Dealers' Magazine.*

Have you ever watched a dynamite squad at work digging irrigation ditches?

Great guns! How the rocks and debris flew!

One little stick of that dynamite did more in a fraction of a second than many men could have accomplished in a day's time.

It's the same way in trade extension work—some things will accomplish more in a few weeks or months than the old-fashioned methods would do in years. It's all in the difference in ways and means.

You must first jar the customer loose!

For years and years the class which we ordinarily style the "customers," or, in other words, the people who need the goods which are sold in retail stores, have been bandied around from one to another retail selling agency, until it takes something unusual to awaken them to making a change. They have gone the whole gamut of every retailer in your city—they have been lured to the big cities through the clever advertising of the department stores—and they have diligently pored over the mail order catalogues in search of their much-heralded bargains. Ever and anon they have come back to you, only to wander again to pastures that looked greener.

The average customer has been coaxed, cajoled, lured, forced, persuaded, begged, convinced, deceived and bullied so everlastingly much by this an that method of merchandising that they are just like a herd of antelope that have been shot at all season, "gun-shy" and chary of all ordinary selling tactics.

Elephants are about the wisest animals in existence, and experienced sportsmen from Africa say that every season the hunters have to adopt absolutely brand new methods of hunting them. The reason is simply this—they get wise to the ordinary routine and refuse to fall for the same lures that decoyed them last year.

A great writer on business subjects has recently expressed the customer's viewpoint very forcefully. He says:

"There has been so much of flim-flam in one form or another with regard to so-called advertising, that it is no wonder that the average customer refuses to respond quickly. He is simply burned out on the quackery and humbug that have been passed out to him. The direct method, whereby the dealer plays square to a die with his customers, is the paying way."

As the quick, writhing snap of the whip, cracking over their heads, startles and spurs on the spirited team of horses, so does the right kind of merchandising methods awaken and enthuse a community. Every merchant in the United States has probably at some time or another, made an attempt to "do something" to bring him more trade. Perhaps he has failed altogether, or perhaps his efforts have not produced quite the results he had hoped for. There appears to be only one answer.

He was using only the usual, conventional methods, and these have been used so long that the people have become blase and practically immune to their effect.

But let him try something new and original, and intensely interesting, and he will be surprised to see how the buying public swarms to his store. If in addition to all this the dealer gives good values, and one hundred per cent. efficient store service, he will be able to hold his new-found trade as long as he is in business.

Suppose you start out, from now on, with the express purpose of inaugurating more originality into your business system.

Make up your mind that what you do in advertising and selling endeavors will be different and effective. Get out of the old rut of conventionalism, and it will take your bank account out of the rut, too.

HARDWARE BUSINESS IN HAMILTON for sale. Stock and fixtures about $5,000. Store and dwelling could be carried on $3.000. Box 406, Hardware and Metal, Toronto.

WANTED — HARDWARE SALESMAN — one with knowledge of stove business preferred. State salary expected. Apply Howies', Brantford, Ont.

HARDWARE MAN, FIFTEEN YEARS' EXperience, retail manager and buyer for large hardware firm, desires change, where interest would be given in business. Box ..., Hardware and Metal.

NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

CARBON REMOVER

American Oil Products Co., 1426-38 Seneca street, Buffalo, is marketing the Opco carbon remover for automobile, marine, stationary, gas or gasoline engines. The makers state that Opco is a harmless oil mixture for cleaning every kind of gas engine cylinder of carbon. It is said to penetrate, soften and burn out carbon. It can be introduced through a priming cup, spark plug, taps or intake manifold. A quart can of the product is said to contain enough Opco for ten to fifteen cleanings of an ordinary gasoline engine. Complete details with prices, etc., will be supplied on request.

CAM ACTION CATCH

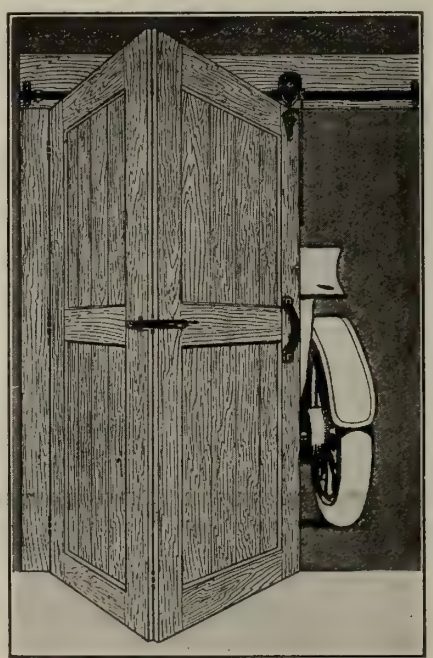
The cam action catch has recently been added to the Stanley Works' New Britain, Conn., line of "hardware for cellar windows." No. 1763 catch is held in any position by a tension spring washer which prevents it from rattling and working loose. Windows stuck to their sill are forced open by the lever or cam action of the slanted edge. Because of its wide diameter, this catch, it is said, works satisfactorily with as much as a 3-16 inch crack between the sash and the sill. The catch is made of heavy wrought steel. It has a strong, thick rivet and a comfortable knob.

The strike plate is shaped hollow in order that it will not become clogged with dust or dirt. It is strong, simple and durable.

The makers state that a catch at the top and bottom of a cellar window, or one at each side, is all the hardware necessary to hold the sash securely in place; and when coal is being put through the opening, the sash can be removed and there is no danger of the glass being broken.

To use No. 1763 in this way the edge of the sill must be flush with the closed sash. For use under other conditions, use No. 1763½.

The catches are packed one dozen in a box, with four 3¼ x 7 flat head screws for each catch. Gross weight per box of one dozen sets, 1¾ lbs. Furnished in Japanned, 1763-J; and Stanley Sherardized, 1763-Z.



No. 1763½ is for use on storm windows, cellar windows, and as a screen or sash fastener. The strike for No. 1763½ is fastened to the sill. There are two spikes or prongs at the bottom of the strike which grip into the wood and hold the catch firmly in position even though it is fastened with but one screw.

Packed one dozen sets with screws in a box. Gross weight per box of one dozen sets, 1½ lbs. Sets comprising one catch, one strike plate and three screws.

The Stanley Works, New Britain, Conn., The Stanley Works, 100 Lafayette St., N.Y., or 73 East Lake St., Chicago, will be pleased to furnish additional information.

TOPPING'S GARAGE DOOR HANGER

Topping's folding garage door hanger is now being offered to the Canadian trade by the Safety Door Hanger Co., Ashland, Ohio. The makers state that

Toppings Folding Garage Door Hanger.

garage doors fitted with the hanger can be opened to allow any width of opening from a few inches to the full extent, just as easly as you can operate an ordinary house door. The advantage of this, it is claimed, will be particularly apparent during the winter season when cold winds, rain, sleet and snow are effectively kept out. When the door is opened to its fullest extent, it occupies the smallest possible amount of space and at the same time leaves the door opening free and clear. The makers further state that the new hanger does not allow the door to encroach upon valuable space either inside or outside.

The makers state that the door can be applied with ease and that it needs no run-way extending beyond the building on either side. When the door is open it stays so without any attention on the part of the operator, and when closed it automatically snaps itself tightly shut. The hanger is sent out complete with all parts necessary to put up a door complete.

Complete descriptive matter with diagrams of door, etc., will be mailed upon request.

WEEKLY HARDWARE MARKET REPORTS

(Continued from page 44.)

lamp wick. The best quotations now available for these items are:—Cotton rope (per lb.)—3-16, 38c; ¼ and over, 37c. Sash cord—No. 6, 47c; No. 7, 46c; Nos. 8, 9, 10, 45c. Cotton rap twine—3-ply, 40c; 4-ply, 43c. Lamp wick—O, 55c gross; A, 70c; B, $1; D, $1.60. Flat stove wick—3 in., 35c doz.; 3½ in., 40c; 4 in., 45c; 4¼ in., 50c. Candlewick packing, 40c lb.

Many Sundry Lines Advance

Jobbers advise that revisions have gone into effect in the prices applying to various lines of wrenches, the new prices affecting the agricultural and knife handle, monkey wrenches, as well as Stillson and Trimo pipe wrenches. Advances vary from 5 to 12½ per cent., and the prospects for a further rise seem bright in the near future. Net prices given below on Stillson wrenches will show to what extent this line has been affected. The discount is now 60 per cent.:—6 in., 80c each; 8 in., 80c; 10 in., 90c; 14 in., $1.20; 18 in., $1.60; 24 in., $2.40.

Other lines to show activity during the past week are as follows:—

Caldwell sash balances, 20% discount.

Soldering coppers, 60c lb. base.

Canvas covered suction hose, 42c per foot.

Big Ben alarm clocks and Baby Ben alarm clocks, $2.40 each.

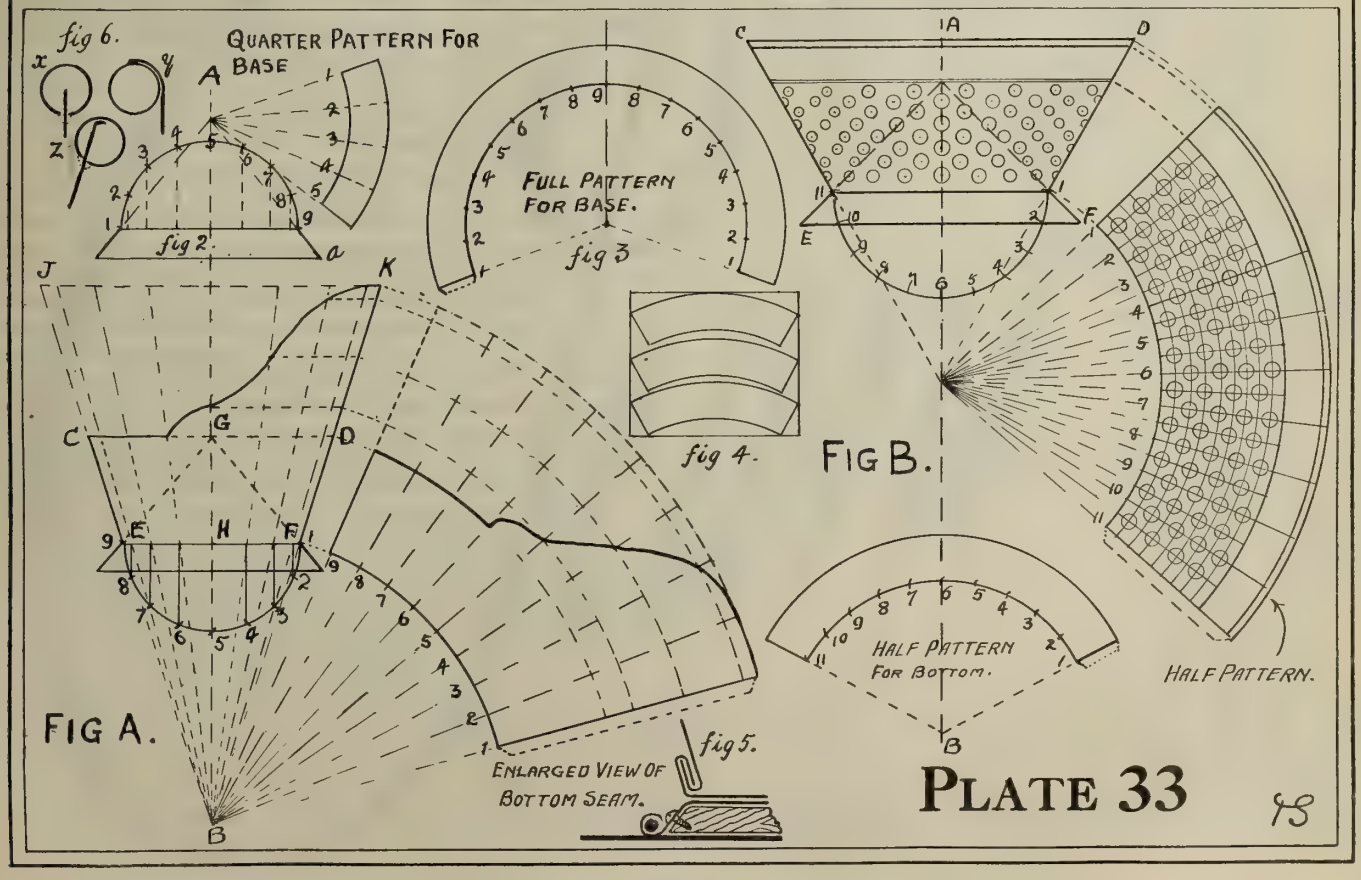
Band iron, $3.75 per 100 lbs.

Wash machines—Dowswell, $4 each; New Century B., $9 each; New Idea, $9.90 each.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD



IN the accompanying article, and illustration is shown how pattern for trough end may be developed.

The first step is to draw the elevation as shown in Fig. 2. The next step is to determine the exact shape and size of the end. The original drawing was made quarter size. It will be seen that our inquirer wants to develop an end for a trough 14 inches wide and 12 inches deep. The elevation, Fig. 2, does not give any idea of what the width of the trough is. Neither does it give the radius of the circle.

However, the width is to be shown as quarter size, thus a half circle will be 3½ diameter, and 1¾ from centre to A, and 1¼ from centre to B. These two measurements make up a total of three inches, which is one-quarter the depth as well as length of end.

Having drawn the half circle Fig. 1, it must now be divided off into eight equal parts as shown at 5, 4, 3, 2, 1, 2, 3, 4, 5. It will be seen that these figures take up the entire half circle, being the quarter size of width which is necessary, viz.; 14 inches (full size.) Now extend from centre line to line as shown at B, 1¼ inches. This makes up the plan of end. Next step to take will be to carry dotted lines down from points 1, 2, 3, etc., to the top line on Fig. 2, until 1, 2, 3, 4, 5, etc., is completed. Now carry lines at 45 degress to vertical line on Fig. 2, and draw dotted lines at 45 degrees from both the horizontal as well as the vertical line of Fig. 2, from points developed from the half circle. Use the centre dotted line for a stretchout line and transfer the measurements 1, 2, 3, 4, 5 and repeat to this centre line. Now cross these dotted lines at points 1, 2, 3, etc., beginning at 1 in the centre until 5 is reached. Then place the compass point at x x, and open up 1¼ inches. Now join x, x, on stretchout lines at 5 to whatever point this last measurement is. Having completed both the dotted and solid lines 1, 2, 3, 4, 5, etc., Fig. 4, proceed to finish the pattern by connecting each intersection as shown by the two curves, and the pattern is completed with the exception of allowance for seams and edges.

The chief point in this problem is the difference between the width and depth, but suppose this trough had been the same width as depth then the only difference there would be in the two patterns would be that the solid line at 5, xx, would have come to a point. It will be noted when this pattern is developed the trough is straight from point 5 as shown in Fig. 3. The small plan and elevation shown on top right corner are the sketches submitted.

WEEKLY PAINT DEPARTMENT

Paint and Property Preservation

An Interesting Method of Showing the Value of Paint—The Figures of an Ingenious Statistician—Advise Your Customers of the True Value of Paint

A WRITER in a publication devoted to the paint industry, has been doing a little figuring. As a result he brings forward the following very interesting set of statistics:—

"A house, with proper care, should last from 100 to 250 years, depending entirely on the foundation, construction and material. Good paint, properly applied, when needed, is the main thing in making a house last long and well.

"Say that it costs $125 to paint a $2,500 house, and that it will need painting nine times in sixty years. That would make a total cost of $1,125 for painting, and the house would be in good condition—providing the construction were good — at the end of that period.

"Now, if the house were not painted at all, it would not last over thirty years making a cost of $5,000 for two houses, both rotted down, against $1,125 for paint, or a total gain of $3,875 plus the value of a good, sound $2,500 house, or a real gain of $6,375 on a $2,500 investment in sixty years, not counting the actual use of the house as worth a dollar. But the use of a house is usually considered worth a good rate of interest on the amount invested and, on an average, might be called about 10 per cent.

"By keeping the house well painted the paint earns nearly 4½ per cent. on the entire investment in a saving capacity.

"But going still further, we may say that $1,125 worth of paint and labor earns $6,375 in sixty years, or 9 per cent. plus, after deducting the cost of paint and labor.

"Making a dollar earn over 9 per cent. and still keeping it in one's pocket, may be considered a pretty good investment.

"Paint up!"

Whether or not these figures are close to the actual truth—being a paint man, he has perhaps strayed into exaggeration—they point out very forcibly a great truth. If a house is to be kept in good condition it must be painted at certain regular intervals. Painting a house regularly may not make it live a hundred years, or sixty years. Certainly, however, it will add at least ten years to its span of respectable appearance. Let a house stand up bare and unprotected by fresh paint against the rain and cold and wind and it will fall into disrespectability and disrepair many years before its neighbor, which has been painted regularly.

It does not require any stretch of imagination to figure out that painting a house is a good investment. Nor does it require an ingenious table of figures to prove it. Any builder, any house owner with common sense, will strongly support the statement.

This question of the property preservative value of paint is one of particular moment at the present time. The winter is just starting, and the time is, therefore, at hand when property is subjected to the effects of extreme cold and wet and rain. It is at this time of year that the parsimonious property owner begins to realize that his refusal to have his house painted was a false economy that is bound to cost him dear.

And so, a word of advice to the hardwareman: Why not talk paint and property preservation to your customers?

Preventing Mould on Paint

Henry A. Gardner, of the Institute of Industrial Research, Washington, D.C., has completed an interesting study of the formation and prevention of moulds in paints. In all localities where moisture is prevalent more or less trouble is found from mildew forming on paints, especially green paints. In some of his tests, involving white spots on linseed oil that had separated from the pigments Mr. Gardner found that the oil that had collected on the top had a distinct odor of fish and smelled like cod liver oil. Chemical tests, however, proved that this was absolutely pure linseed oil.

After having stood in a bottle a few days this oil appeared turbid and viscous. The surface film was peppered with white dots. Tests showed that some glycerine was present, which was accounted for by the free fatty acid present due to the action of the lead on the oil. The peculiar appearance and odor of the oil was due to the formation of some sort of mould or bacteria. Some of the dots of mildew were planted on gelatin and in 24 hours had developed into typical green mould, practically the same as forms on stale bread, moist clothes, etc.

The use of five per cent. of liquid naptha in paints in which these moulds or mildews are to be found will prevent their growth and prevent many a structure from premature decay. Or such antiseptics as benzol, pine oil, high boiling products of turpentine, or the more expensive essential oils will preclude the possibility of these fungi contaminating the paint.

For the walls of a room a dull flat finish is always desirable, as it prevents the glare which a lustrous finish possesses. It is easier on the eyes and can be obtained by the use of a good standard flat wall finish. The finish that will stand occasional washing most satisfactorily should be selected. Not only can the walls be kept spick and span, but after sickness the house can be properly cleaned and perfectly disinfected at a minimum of expense and with the least work and inconvenience.

The Best Materials

Better paint, better varnish, better linseed oil were never produced than can be bought to-day. Most painters prefer to use good materials, but if you want to insure your property against any chance of having poor paint materials used, it is sound business to do the buying yourself, or insist that all paint ma-

Owning and Operating P. D. DODS & CO., LIMITED

The popularity of your store depends mostly on the stock you carry. Talking of Paint, there is no better seller than Ramsay's and every can is a can of satisfaction. Since 1842 Ramsay's Paints and Varnishes have been made right and have proved their ability to stay right. Color and quality are fixed. Ramsay's complete line "is" complete, and that's the line of paint for you to carry if you would make yours the most popular store in town.

Ramsay's Paint

A. Ramsay & Son Co.

Established 1842

Toronto MONTREAL Vancouver

WEEKLY PAINT MARKETS

Montreal

MONTREAL, Nov. 15.—Indications grow more pronounced that mixed paints may very soon advance. An advance is predicted in trade circles, also, as regards putty. Linseed oil is largely responsible. Turpentine showed a slightly easier shading, but not permanent in market opinion, and not general. Lead is very firm, and higher prices for white lead in oil are predicted before long by those in touch with market trend. Shellac is firmer being quoted at 35½ cents for Orange gum shellac, and bone bleached at 43 cents lb. Montreal. Gasoline is unchanged in price still quoting at 27½ cents per gallon.

Linseed Oil is Again Firmer

LINSEED OIL.—With quotations from the crushers for car-load lots already well over the dollar, and apparently going firmer linseed oil is now being quoted to the retail trade at prices well in advance of those quoted last week. Absolutely no sign of relaxation in prices can be discovered. Argentine conditions as far as can be learned are decidedly bad. Production in other sources of world supply of flax seed is disappointing, and there will be less than half the usual quantity of the world's consumption of this commodity available for the coming period of consumption till next season's crop comes on the market. Demand for oil cake is exceptionally brisk and prices for this are high ranging from $46.00 for the cake to $48.25 for the meal, per ton. This factor tends slightly to reduce prices for the oil, but old prices cannot be anything but high. Present quotations in Montreal are:

Linseed Oil

Per gallon Imp.	Raw	Boiled
1 to 4 bbls. ..	$1.15-$1.20	$1.20½-$1.25
5 to 9 bbls. ..	$1.14-$1.19	$1.19½-$1.24
10 to 25 bbls..	$1.13-$1.18	$1.18½-$1.23

There was no anxiety on the part of any dealer to encourage large business in linseed oil.

Turpentine Shows Slight Shadings

TURPENTINE.—Some firms were willing to quote 69 cents per gallon for turpentine this week, which is a slight shading down from last week's low quotations, but the market remains in opinion of most paint manufacturers firm, and subject only to passing fluctuations. Prevailing opinion would keep prices at about the figures quoted last week, the lower quotations being for considerable orders. One large firm quoted as low as 68 cents for quantities, several firms quoted as high as 75 cents for small orders. Average prices are given as last week:

Turpentine	Per Imp. gal.
1 barrel lots	70c-75c
2 to 4 barrels	69c-74c
5 to 10 barrels	68c-73c

White Lead in Oil Threatens Rise

WHITE LEAD IN OIL.—Prices for white lead in oil in ton lots are unvaried this week, but there is a strong tone to the market, and with lead firm, and linseed oil advancing sharply, there is every chance of an increase before long in the price of this product. Winter freight rates are mentioned as likely to increase the firmness in this product, and a good demand is being experienced for it. Prices are for 1 ton lots $13.80 and for smaller lots $14.10 per 100 lbs.

Opinions Are That Paints Must Rise

MIXED PAINTS.—It seems now inevitable that prices of mixed paints are in for another increase. Opinions on the markets all round are that manufacturers are simply studying the linseed oil situation and giving matters time to settle down to something more like permanence as regards price and more like certainty as to prospective price changes in linseed oil before deciding on the extent of the increase necessary in mixed paints to make the business of manufacturing them profitable. Cautious minds in touch with the market conditions have held off from hurried buying with conviction that prices for linseed oil and other materials etc. for making paints have been subject to speculative fluctuations. Now however, the tendency becomes more pronounced to believe that real conditions of shortage in all the essential ingredients are responsible for the steady rise in prices, and the manufacturers are likely to make their new lists for mixed paints on a basis that will provide for still further probable firmness in the markets for raw materials. Linseed oil, turpentine, lead, zinc, and dry colors of various kinds all show the firming tendency most markedly now, and those who can buy mixed paints at the prices most lately quoted are likely to have cause for rejoicing later on.

Ingredients of Putty Cost More

PUTTY.—It seems certain that putty will increase in cost before long. The conditions affecting the ingredients, whiting and linseed oil are all towards much greater firmness for both materials, and with the cost of labor also higher the indications are decidedly in the direction of higher priced putty. With the advent of winter glaziers' demand for this product has been increasingly active. Pure linseed oil putty is quoted at from $3.20 to $3.75 per 100 lbs. in ton lots, the lower price being for bulk putty in casks, the higher in 12½ lb. tins. For less than ton lots 20 cents additional per 100 lbs. is charged.

Toronto

TORONTO, Nov. 17.—Business in all paint lines is reported good. Turpentine is reported in brisk demand, principally coming from the manufacturing trade for use in furniture and piano trade. Varnishes are in very strong market and an advance would not be improbable in the near future. Linseed oil is in a firm market with advances recorded in many quarters during the week. Glass still continues in a steady market. Gasoline holds steady. Mixed paints are very firm. Present condition seems to point to higher prices in mixed paints before the end of the year. Shellac is also very firm on reports from Calcutta, stating that there was an excited and active market for the gum. Brush manufacturers issue their prices for the year about January 1. In the face of present conditions with shortage of bristles in certain quarters and labor and other materials high, it is antici-

(Continued on page 56.)

How Long Should Paint Last?

The highest standard of paint durability is that established by Brandram-Henderson products.

In their composition, ingredients and manufacture, every factor that would help to lengthen their term of service has been employed.

In the matter of grinding for instance the white lead and white zinc for B-H "English" paints are not merely ground in oil, but are ground by a process that makes the particles of impalpable fineness and as a result

B-H Paint Penetrates

deep into the microscopic pores of the wood, instead of remaining as a surface coating that might peel and scale away.

The B-H "English" Formula:

70% Pure White Lead
30% Pure White Zinc
100% Pure Paint

produces a paint with maximum *covering* capacity and durability.

The ingredients for B-H paints are selected by competent experts with scrupulous care and prior to use are submitted to a series of exacting tests. This thoroughness is characteristic of Brandram-Henderson methods and is responsible for the success of B-H agents throughout Canada. It gives them a line of paint and varnishes that quickly becomes the leader in every locality in which it is introduced.

Our Representatives

In localities where we are not yet represented we are selecting merchants to handle our lines. Our Agents will receive the undivided support of this firm in getting the paint business of this locality.

Write us for all particulars as to the agency proposition.

WEEKLY PAINT MARKET

(Continued from page 54.)

pated that the new prices will show advances.

Linseed Oil Shows Advances During Week

LINSEED OIL. — Advances were recorded in certain quarters on the price of linseed oil during the week of approximately 5c per gallon. There is a considerable range of prices running all the way from $1.11 to $1.20 for raw linseed oil. There was a slight weakness in the flaxseed market on Wednesday of this week. Some high prices were paid for the seed during the week, but on Wednesday it had dropped near the quotation at the same day last week. Flaxseed went to $2.73½ on Monday of the present week, but declines were recorded on Tuesday and Wednesday and the market closed at $2.59. At the opening of the market on Thursday a slight revival of strength was shown. The decline in flaxseed is stated to be due to the heavy arrivals of flaxseed at Winnipeg, during the past week or ten days in the neighborhood of 50 cars reaching the Winnipeg market. Oil men are of the opinion that flaxseed will go to still higher levels than recorded recently once the shipments of the seed reach normal figures again. In the United States there has also been heavy movement of the seed to market. Demand for oil is reported good. Linseed oil cake is quoted from $45 to $48 per ton. Quotations are as follows:

	Raw	Boiled.
1 to 2 barrels	$1.11—$1.20	$1.14—$1.23

3 to 5 barrels, 1c under 1 to 2 barrel lots for both raw and boiled; 6 to 9 barrels, 2c under 1 to 2 barrel lots.

Turpentine Advances In Some Quarters

TURPENTINE.—A brisk demand is reported for turpentine from certain quarters, principally from furniture and piano manufacturers. Much of it is also being used in stove pipe varnishes and interior finishes. In the primary market at Savannah turpentine continues in a firm market at 46½ to 47c. Considerable export demand continues there and this is having a firming tendency. Locally prices advanced in certain quarters 1c per gallon. Following is the range of prices:

	Per Imp. Gal.
1-barrel lots	69c -74c

Demand for Gasoline Falling in Country

GASOLINE.—There has been a brisk demand for gasoline in the city, but consumption at country points has fallen off considerably recently, in all probability due to the inclement weather and bad roads in certain districts. Locally, the price of gasoline is holding steady. In the United States crude oil has been in a firm market and the price of the refined product has even advanced 1c per gallon in New York State. An advance in Canada is not anticipated and a decline is not looked for in the face of the crude oil market. In Toronto it is quoted at 26½c to 27c per gallon, either in barrels or drums or from tank wagon. Benzine is 1c under these prices.

Glass Still Holding Steady

Although dealers are expecting to hear of advances being announced by American manufacturers of glass, as yet no advices have been received to that effect. The trade is reported good.

Varnish and Shellac Are in Strong Market

VARNISH AND SHELLAC.—Varnish is in a strong market with the manufacturers complaining that at present prices they cannot make the production of the article worth while. Gum for varnish is up in price and this has placed the manufactured articles in a strong position. Shellac is very much in the same position. Cables from Calcutta, the headquarters for the gum shellac trade, state that the market there is ecited and active with gum quoted at 34c per pound, cost and freight. On the New York market importers there are asking 35 to 35½c per pound. Locally gum shellac is quoted at 34c but this is considered too low in the face of the New York market when it is considered that freight and duty must be paid from that centre. In the London market shellac is in very firm tone.

Demand for White Lead is Limited

WHITE LEAD.—Dealers report a limited demand for white lead. Prices hold firm at recent quotations. High prices are believed to be operating to shut off the demand. In small lots white lead in oil is quoted at $14.25 per 100 pounds and $13.95 in ton lots.

PREVENTING HOLD ON PAINT

(Continued from page 52.)

terial be brought on the job in the original packages.

If, however, you have the time and inclination to do your own painting, there are a few points that it is well to keep in mind. Do not buy the cheapest brushes you can get. They will neither hold, spread, nor brush in the paint properly. Get all bristle brushes set in either cement or rubber. Never leave your paint brush standing in the paint pot over night. The bristles are likely to become bent and the brush will work poorly.

When you are through for the day wash out your brush in turpentine or benzine and lay it out flat on a board over night, or suspend it in a pail of raw linseed oil, turpentine, or water. When your painting is finished carefully wash your brushes out in turpentine or benzine and afterward with mild soap and water, rinse them out in clear water and see that they are free of gummed paint.

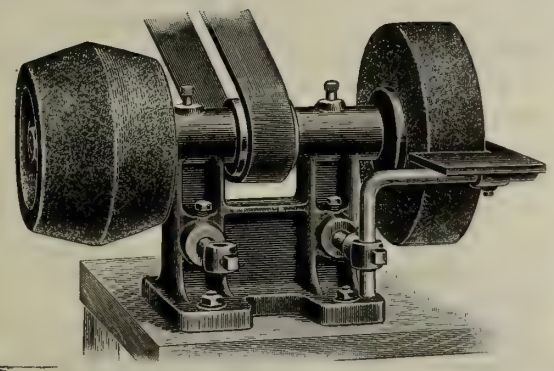
In painting, the first, or priming coat is most important. If it does not thoroughly anchor into the surface the subsequent coats of paint that are put over it will crack and fall off when the priming coat lets go. The priming coat should be thin enough and the pigment fine enough to readily enter all the minute surface pores and thus anchor into the surface and give a solid foundation for the other coats. On new work three coats of paint, at least, should be applied, while on old work two coats generally give satisfactory results, if the old paint is in fairly good condition. Do not paint in damp weather. Moisture in the surface pores prevents the priming coat's getting a proper hold, and is frequently the cause of blistering. Be sure to allow each coat of paint ample time to become thoroughly dry before applying another coat. Two or three days are usually sufficient, but a week is better.

Cheap paint is rarely economical. All paint looks well when it is first applied. But the economical paint is the kind that keeps its looks for years and provides a smooth, unbroken, weather-proof film that gives protection as well as beauty. Select your paint with as much care as you do your seed or your stock, and you will make a good investment in satisfactory painting.

OLD AND NEW METHODS

From the *Inland Storekeeper.*

There is a vast difference in business methods of 10 or 15 years ago and those of to-day, and the fellow-merchant who is not keeping step with the change is losing out, and at last old age and failure will stare him in the face. What would any of you merchants think of an Iowa farmer if he planted his corn with a hoe, mowed his hay with a scythe, cradled his oats and barley, sewed his grain by hand, and used the ox yoke and oxen to till the soil? Would you call him a progressive farmer, or would you call him a back number or failure? Would it not be just as practical for old-fashioned methods on the farm as in business? Does this not apply to your business and mine?



The catalog houses and large department stores are pouring in their advertising matter from all sides. Special sales, calling attention to new goods, etc., etc. And a good many of us inland town merchants sit around like a bump on a log. We don't spend any money for advertising.

If you are lucky enough to have a weekly paper, chances are you don't patronize it with an ad, and if you do, how much time do you spend preparing your ad? How many of you change your ad each week and give the editor plenty of time to arrange it properly?

American Self-Oiling Grinders

COST NO MORE THAN ORDINARY GRINDERS

Sickle Grinders Tool Grinders Power Grinders

WILL GIVE YOUR FARM TRADE A MEASURE OF SATISFACTION THAT WILL GREATLY BOOST THE SALES OF OTHER GOODS. We recommend these grinders to the trade as most attractive and highest grade grinding machines on the market.

ORDER FROM YOUR JOBBER. If he does not handle the "American" Line, write direct to factory.

26 gauge	4 15	4 15
28 gauge	4 25	4 25

Re Gauges of Sheets.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

MACLEAN'S MAGAZINE for DECEMBER

ON all sides you hear this—"MACLEAN'S MAGAZINE grows better all the time." There is a reason: it is that MACLEAN'S publishers are getting more and more of the best work of the best Canadian writers and artists. The cost is heavy, but it is the price of betterment. Also, MACLEAN'S policy of making a magazine of definite Canadian character is being greatly appreciated by the best class of the Canadian people. In the following condensed summary of Contents you have evidence of the character and appeal of MACLEAN'S:

Contents:

From Stephen Leacock is "Abdul Aziz Has His"—a follow-up to his "Germany From Within," one of the best things Leacock ever wrote. It tells the story of Leacock's visit, disguised as an English Governess, to the Yildiz Kiosk.

A story, "The Pride of Pauline," by Sir Gilbert Parker. A story of the Canadian North-west—a typical Parker story.

Robert W. Service's contribution is 'The Ballad of Jean Desprez" —a very stirring story of the war, with a mighty swing to it.

Two exceptionally good Christmas stories—much above the average. One is "The Blue Water Prodigal," by A. C. Allenson, a story that combines humor and sentiment with a patriotic setting. The second story is by Alan Sullivan, a story of missionary life—"The Soul of Nanook"—an admirably written thing.

H. F. Gadsby has an article dealing with the problems facing Canadian statesmen, under the heading: "Peaches and Lemons." Gadsby gives some straight-from-the-shoulder talk from a purely non-partisan standpoint.

A sketch of the Hon. W. M. Martin, the new Premier of Saskatchewan, by Norman Lambert, under the heading: "The Man Who Brings Back the Ball."

Add to the foregoing the fine Review of Reviews Department; the regular Business Outlook Article, and the Department—"Information for Investors," and you have a magazine worth fifteen cents of any Canadian's money—a magazine for a true Canadian. **Better** for a Canadian than any other magazine, no matter how or where produced.

At all News-Agents— Fifteen Cents

SPADES AND SHOVELS.

The Acid Test—

Literally speaking, UNIVERNISH will stand the acid test. Ammonia won't hurt it—boiling water fails to leave a mark—UNIVERNISH is the one varnish for all uses.

It's good on floors, tables, desks, chairs, pianos, all interior and exterior work. It dries hard and won't scratch, takes a high polish and wears like iron. It's splendid for automobiles and carriages and many motor boat owners swear by it. It will never turn white under any circumstances.

It comes in all standard sized cans. Let us send you handsome counter display case containing 12 quarter pint cans to retail at 25c each.

Quick Service on Your Orders

We can make Immediate Shipment on large or small orders for:

BARS	TEES	RAILS
ANGLES	TURNBUCKLES	RIVETS
SPIKES	PLATES	NUTS
SHEETS	BOLTS	TUBES

Advantages of dealing with us—

Our stock is a complete range, enabling us in most cases to ship your order the same day as received. We will arrange, wherever possible, to include your order with carload lots, thus giving you the advantage of lower freight rates.

We follow each order through to its destination by our own tracing department.

The advantage of being able to secure your material in exactly the size you want saves you paying freight on waste; also the time and labor otherwise required for alterations.

Give this Service a Trial.

Let us have a copy of the first enquiry you may be sending out to the trade. We can offer you both price and service equal to, or better than, that which can be obtained elsewhere.

Send for our monthly stock list.

Manitoba Bridge & Iron Works,
WINNIPEG MANITOBA LIMITED

FALL NEEDS ARE URGENT

Galvanized Sheets, Black Sheets, Canada Plate, Tin Plate and Solder

Wanted now, are needed in a hurry

Our stock is in good shape, well assorted in a variety of sizes and gauges. It will help you give your customers quick service at a time when material is hard to get.

We can also give you quality and service in "Max" Brand Corrugated Sheets, Winnipeg Shingles, Metal Sidings, Metal Ceiling, Eavestrough, Conductor Pipe, Stock Water Troughs, Trough Heaters, etc., etc.

Send your order to us. We will get them on the way to you quickly.

See our November stock list.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS VACANT

WANTED — AN EXPERIENCED HARDware clerk. Apply, stating experience, wages expected, also give references, to Box 270, Orillia, Ont. (45)

WANTED — AN ALERT TRAVELLING salesman with hardware connections in Province of New Brunswick, to represent a large Canadian paint and varnish manufacturer. Apply to Sales Manager, P.O. Box 429, Montreal. (45)

WANTED—TWO LOCK AND HARDWARE travelling salesmen by a prominent Manufacturer. One to cover Eastern and the other Western Canada. Experience in the sales of both stock and contract builders' hardware necessary Address X. Y. Z., Box 404, Hardware and Metal. (45)

SITUATIONS WANTED

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

MANUFACTURERS' AGENT IN CANADA desires Canadian rights on small article to sell through display advertising. Correspondence and catalogues solicited. Frank R. Burgess, 407 Hope Chambers, Ottawa, Canada.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

BUSINESS CHANCES

$15000 — HARDWARE — ONE OF THE best in western Ontario; splendid stand; large town; owner up in years, retiring. John New.

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

TO SELL—HARDWARE STOCK AND FIXtures in a live western Ontario town. About six thousand dollars will handle. Reasons for selling. Will gladly furnish any information desired. Apply Box 405, Hardware and Metal.

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

Atlas

10 Cent Fly Swatter

This swatter has an extra long handle — 10 inches. It is very neatly and securely bound with soft green felt — cannot mar the finest furniture. Especially adapted for parlor or drawing room use. We have made it extra strong and flexible — will outlast any now on the market.

Our 5 cent swatter is the best ever sold for a nickel. Also it has a triangular fold, permitting the insertion of your ad. if you desire.

Now is the time to place stock orders. We'll gladly quote prices and terms.

Atlas Mfg. Co.
New Haven, Conn.

Answer this Question

Do you know of any firm of file makers that writes a more positive, stronger advertisement than we do?

We make

Delta Files

and we say this of them:—

They will outlast any other file made.

They will retain their cutting edge longer than any other file made.

They will cut faster than any other file made.

We say also this:

We guarantee, with a money-back offer, every file we make.

Our files **must deliver the goods**, or the loss is ours.

Then there is this:

Delta files are the **only** files of from 3 to 24 inches long made absolutely of Crucible Steel. There is a size and shape for every purpose.

We've been at this business of file-making for 50 years, and it is out of this half-a-hundred years of competition, effort, victory and experience that we are able to say the strong and positive things we do.

The point is:—Be agent in your territory for Delta Files—files you can "talk up" until your last breath and never overpraise them.

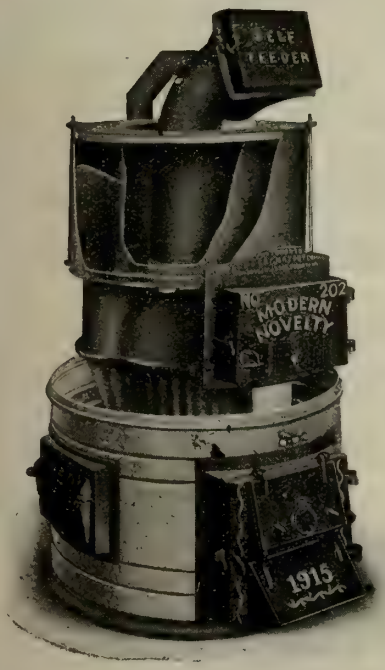
DEALERS, ATTENTION

NOVELTY SELF-FEEDER *HOT AIR* FURNACES



are the best sellers

The whole trade wants them because they make sales; because they save—

TIME, LABOR, COAL

Because they heat equally

ALL DAY and ALL NIGHT

The self-feeder principle places "NOVELTY" furnaces, which have been leaders for 30 years, away ahead of all others and—THEY COST NO MORE

Write now for Catalog and Prices.

PEERLESS ORNAMENTAL FENCING

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.

You can sell our fence with a clear conscience and make money, too.

Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

A Straight Talk from the Manager

No. 51

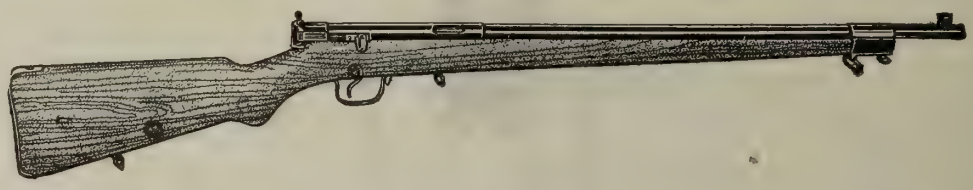
Get the Christmas Spirit

Canada's savings banks are bulging with deposits—the greatest in their history. Industry is everywhere humming and there is practically no unemployment.

Conditions were never before so favorable for a huge Christmas business. Put the Christmas spirit in your store and get your share of the Christmas trade.

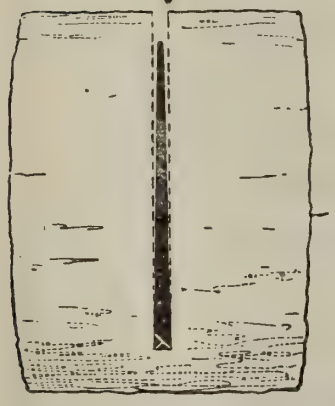
Next week's issue of HARDWARE AND METAL will help you to lay successful plans. It will be the Christmas Goods Number. There will be dozens of advertisements which will give you definite ideas for profitable selling schemes.

Plan to read the Christmas Goods Number with unusual care.



J.G.L.

An Early Christmas Showing of Ross Rifles



Is Sure to Attract Profitable Trade

Boys and girls are thinking of what they want for Christmas. A display of Ross .22 Cadet Rifles is sure to catch their eye. Once they see this splendid little gun, there is no rest for their parents until, convinced that it is no toy but a perfectly safe and reliable rifle, they put a Ross Cadet into the Christmas stocking.

When ordering don't forget the grown-ups — nothing attracts quicker attention than a display of Ross Sporting Rifles. Ross Sporting Models retail at $25.00 and up, Ross .22 Cadet at $12.00. For catalogue, discounts, etc., address

ROSS RIFLE COMPANY - Quebec

Ground so they can't bind.

CROSS-CUT SAWS

ATKINS

Of course, there is easily a larger profit in them. You simply show their easy running and fast cutting qualities, explain the toughness of Sterling Steel. Any customer will pay your price. Try a box of twenty-five or a dozen. We'll make good.

E. C. ATKINS & CO.

Factory—Hamilton, Ont. **Vancouver Branch—109 Powell Street**

If interested, tear out this page and keep with letters to be answered.

OUR Frost King Babbitt sales would not be increasing so rapidly if it were not for the fact that it is probably the most perfectly alloyed babbitt on the market. Also, it is made of the very purest and best metals. A trial of this Babbitt will convince you of this fact.

Frost King Babbitt Metal is especially designed for all classes of Stationary Engines, saw mills, threshing machines, traction engines, pumps, rolling mills, pulp machinery, etc. It increases the life of the machinery.

Get in on this business. There's good money in it for you; and money that continues to come in month after month.

Send to us for 25 lbs. shipment.

Order in the regular way from your dealer.

More business-bigger business

We are never satisfied. Neither are our dealers. Once we get the type of dealer we want, it's always a race to see which one can put the most co-operation, most push, most mutual respect and good feeling into the partnership.

The right kind of a dealer can get so much out of us and our proposition that he's just got to be the livest and most optimistic chap in his neighborhood to live up to his opportunities.

How about you?

To the Hardware Trade —Greetings

WE wish to introduce our products to you, and hope you get agreeably and profitably acquainted with them. These goods are produced from formulae centuries old, originated during the "Artistic Age." They excel any other similar lines ever offered to the Canadian Trade, and as good proof of this we have quoted extracts from letters of leading merchants who have used and sold them. They are TRADE BUILDERS, and THE LIBERAL PROFITS we allow the dealer are very interesting. IT WILL PAY YOU WELL to get in touch with us before increasing your stocks of similar lines.

Cuts of our products are shown herewith, together with the signature of the Sole Maker—H. J. S. Cross, without whose signature no package is genuine.

Henry J. S. Cross.

"We have found that your Cross FRENCH FURNITURE POLISH has given us more satisfaction than any other such preparation we have ever handled. We take pleasure in recommending it highly to all."

(Prominent and Successful Canadian Druggist.)

"It is not like the majority of Floor Polishes—only intended to hold the dust on the floor; but is, as the name implies—A FLOOR POLISH. We sell one renting Agency this material for fourteen blocks, and their unsolicited testimonial to us is 'That it is the Best Floor Polish and Floor Cleaner that they have ever used.'"

(One of Winnipeg's largest WHOLESALE HARDWARE COMPANIES.)

"Our sales have been large, and are rapidly increasing; and there is no doubt in our mind but that it is the very best Furniture Polish ever put on the Canadian market."—One of Winnipeg's Largest Wholesale Hardware and Paint Companies.

"I can recommend it as a good cleaner, and an excellent Polisher, and ***am sure there is nothing injurious whatever to the highest polished article."*** —Leading Canadian Piano House.

"Washing Machines that really Wash"

This Washer runs by water power. Simply fill the tub, connect the hose to the water faucet and the "London" No. 2 is ready to run and do its work.
Motor is made entirely of brass, and so cannot rust. In recent test motor ran continuously for 4,000 hours, which is equal to 25 years of ordinary home service. Only 20 lbs. pressure or a water flow of 3 to 4 gals. a minute required to operate the "London" No. 2.
We sell two hand-power machines (our No. 1 and No. 5 models); an Electric-driven machine (our No. 3 model), and No. 4 Gasoline power washer.
Send for catalogue. It will help you make sales to customers.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

The Steel Company of Canada, Limited

Toncan Metal News

Vol. 1—No. 5 PUBLISHED IN THE INTEREST OF BETTER SHEET METAL November, 1916

TONCAN METAL VENTILATORS REMOVE SALT VAPORS

To carry off the vapors and fumes arising from the salt refining apparatus in the Canadian Salt Company's plant at Windsor, Ont., ventilators made of Toncan Metal Corrosion-resisting Sheets were used.

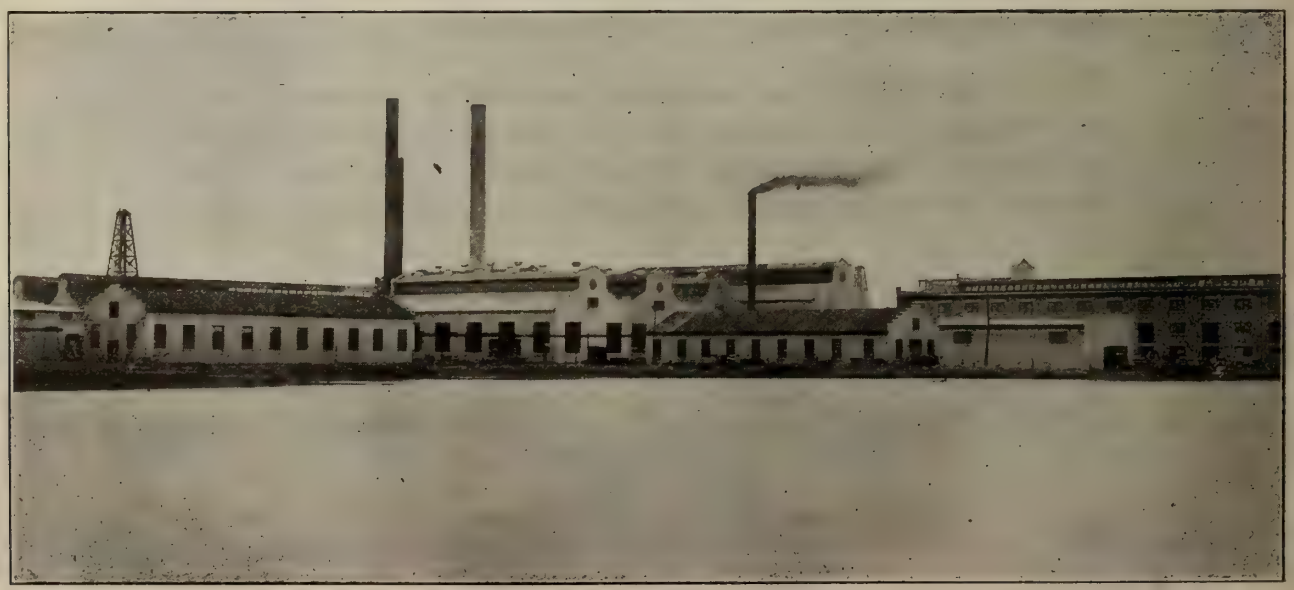
The ventilators are 36 inches in diameter and were made by The Pedlar People Limited, of Oshawa, Ont.

Salt is one of the most severe accelerators of corrosion. It attacks ordinary sheet metal very readily. On the other hand, Toncan Metal Sheets have proven in actual service, their ability to resist the action of salt, salt water, saline fumes, vapors, etc.

Countless other instances could be cited where Toncan Metal was used to combat the influence of salt. For example, on the Traymore Hotel, Atlantic City. every window is equipped with a Toncan Metal wind shield to keep out the wind and salt spray of the ocean.

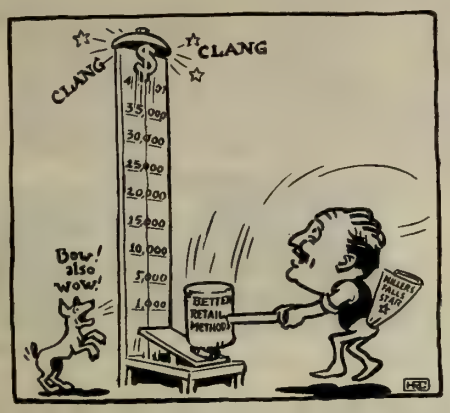
Prominent railroads use Toncan Metal for brine troughs which carry off brine from refrigerator cars. The launch, "Nocoro," built of Toncan Metal has been plying the ocean off the Jacksonville, Fla., coast for two years and is in prime condition to-day. The durability of a sheet metal withstanding these severe tests cannot be questioned.

DID YOU GET YOUR COPY?



No matter how busy you are, here is a booklet you will finish reading, once you get started. It has caused more comment and discussion than any booklet ever published on a similar subject. It is not a technical treatise. To the contrary, it is written in simple, non-technical language.

The Pedlar People, Limited
Oshawa, Ont.
CANADIAN DISTRIBUTORS



Quoth the Corrosion Devil:

All's not Galvanized Toncan Metal that glitters. Look for the Toncan Metal trade-mark on each sheet and piece.

Canadian Salt Company, Windsor, Ont. Equipped with Toncan Metal Ventilators

Better Retailing Means A Better Business

Every month "The Millers Falls Star" is crowded full of valuable suggestions on better retailing. Every month it gives you many new ideas on modern hardware merchandising and shows you ways to improve your methods and strengthen your organization.

Just now we are running a series of articles on sales training that outlines in detail a method of grading up your sales force that will run up the sales total on your cash register and the net profit on your books.

Are you reading the good things in the "Star" and putting them to work? Are you taking full advantage of the merchandising service we are offering you?

Don't let the fact that you are buying Millers Falls Tools through a jobber prevent you from writing us at once and getting our Service. There are several thousand more dealers who ought to be on our mailing list. If you aren't there, write us to-day.

Sell Standard Tools

Here's the mitre box that is known the country over as the standard tool for doing fine and accurate work. Quick-acting—unusual capacity range—rigid construction that will last for years.

If you only have a small tool stock, you need to carry the Standard tool.

MILLERS FALLS CO.

"Toolmaker to the Master Mechanic"

MILLERS FALLS, MASS.

N. Y. OFFICE, 28 WARREN ST.

Right tools used right produce satisfaction

¶ Most all the lines you handle come in a variety of styles. Each style is just right for the particular use for which it was designed.

¶ And the farther you get away from that use the less satisfaction.

¶ Hack Saws are no exception. Different lengths, widths, gauges, and pitch.

¶ Let's talk about pitch or the number of teeth per inch. There are four pitches in hand blades alone, ranging from 14 to 32. The fourteenth pitch is best adapted for cutting Soft Steel or Cast Iron.

¶ The thirty-two pitch is designed for cutting very thin sheets and tubing.

¶ Now if a man tries to cut tubing with a fourteen pitch blade he'll find the teeth will all break off. When he uses a thirty-two pitch for Soft Steel he **may** get through it before dark.

¶ In either case chances are there'll be a kick coming to the dealer.

¶ To help reduce these difficulties we have compiled price list showing the right blade for each cutting job. It's free for the asking and might be worth your distributing.

"It's the little things that count."

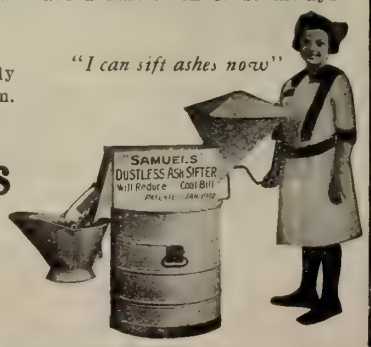
Economy This Winter

The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

CANADA Dustless Ash Sifter



(See illustration)

Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.

Jobbers everywhere supply them; order through them.

TOCH BROTHERS

Make Your Cement Floors "Dustless"

Like workmen with hammers and chisels, traffic slowly but surely breaks down the surface of all bare cement floors, and crumbling and rapid disintegration begin their deadly work.

R.I.W. REMEMBER IT'S WATERPROOF — REG. U.S. PAT. OFF. — **CEMENT FILLER & CEMENT FLOOR PAINT** — PATENTED AS TO PORTLAND CEMENT FEB. 27, 1906

Stop all this immediately they are applied
Cement Filler penetrates the surface and binds it into a hard, tough, granite-like mass, more durable than any bare concrete can be.
Cement Floor Paint follows as an added protection, coloring the floor any desired shade.
Both old and new floors may be treated over the week-end, ready, good as new, on Monday morning.

Write Dept. 50 for special floor-paint booklet.

The Best Extension Ladder

This ladder is both light and strong because it is trussed with steel rods, one of which supports each riser and takes the heavy strains. These wires are strung as tight as piano strings. They are fastened at both ends to threaded bolts which can be tightened if the wires should become slack. The truss rods are beneath the risers, where they will support the weight; truss wires in any other position are worthless.

It is made of Douglas Fir, grown in our own country on the slopes of the Rockies and a most excellent light and durable wood for the purpose.

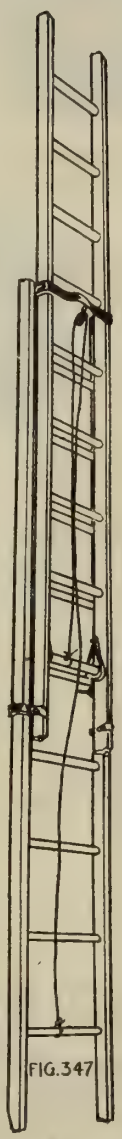

FIG. 347

The lock is malleable iron and very heavy. It will engage with any round desired when going up, but coming down will automatically miss them.

The strong point of this lock is the way the weight of the top ladder section is carried from its rounds to the rounds of the lower section. The bolts attaching the lock to the risers of the ladder do not have to carry the load as they do in all other styles of automatic locks.

We make all kinds of ladders — extension, step and fruit-picking. Order from our Salesman next time he calls.

CHANNELL CHEMICAL COMPANY, LIMITED, TORONTO, CANADA

THE Stanley Garage Door Holder is an especially popular item in the line of Garage Hardware and is being applied to as many old garages as new. It holds the doors securely open in the windiest weather, so they cannot slam against the incoming or outgoing car.

A garage equipped with

STANLEY GARAGE HARDWARE

signifies that its owner has much to be thankful for, as it is evidence that he has the discrimination and the ability to buy the *best.*

If it is through *you* that the garage owners of your town are being supplied, you also have cause to be thankful, for Stanley Garage Hardware brings mighty good profits to the merchants who handle it.

Advertisements in periodicals of all classes are creating a big demand for this line. If you are not prepared to get your share of the business, write for Catalog R411 and information concerning Stanley Sales Helps.

Canada's Only Weekly Hardware Paper

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 28 TORONTO, NOVEMBER 25, 1916 No. 48

The Demand Will be Very Heavy This Year for all Classes of Christmas Goods—The Hardwareman's Opportunity—Lines That Offer Splendid Opportunities for Sales.

THE Christmas trade has been growing in importance to the hardwareman with each succeeding year. This year it should reach a total larger than ever before.

It is a certainty that the demand for Christmas goods is going to exceed bounds, and far outlap the records of previous years. This, despite the conditions created by the war and the sadness that hovers over so many Canadian homes. It is a fact that most people have more money to-day than at any time before. It is equally true that the sadness and uncertainty of war time will cause even greater gaiety over the holidays than would otherwise have been the case, for people turn to anything that offers forgetfulness with a zest hitherto unknown.

Granted, then, that the opportunity for Christmas trade is greater this year, it follows that the hardwareman should make an especial effort to gather in his full share. His share, by the way, has been growing year after year, and now it should quite eclipse past records, for the very good reason that the war has molded people's minds and, when they do relax into holiday-making and gift-giving, they will buy more gifts of a practical nature than ever before. And this will turn their steps with greater frequency than before in the direction of the hardware store.

The Soldiers' Trade

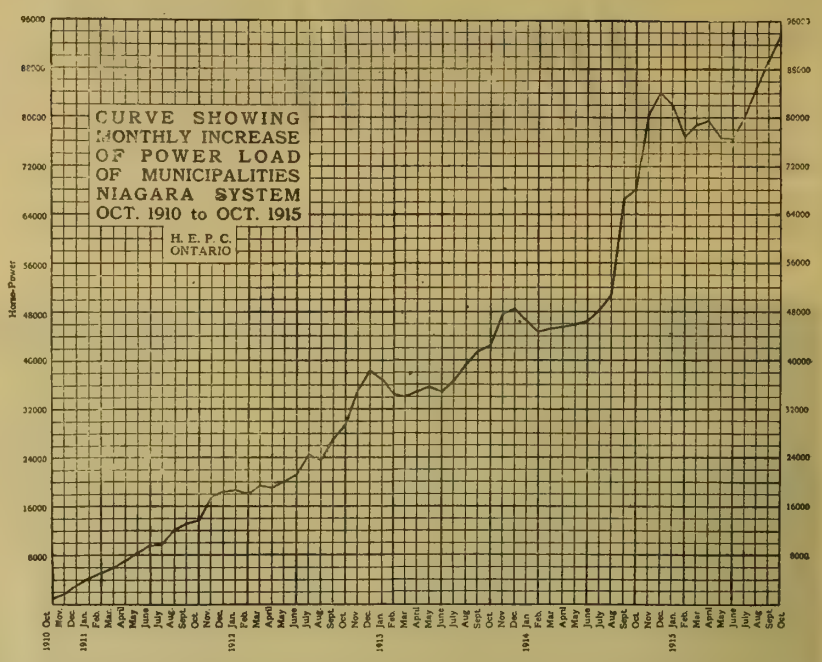
There is, in addition, a concrete reason. A tremendous volume of business will be done this year in presents for soldiers. Gifts for the boys overseas will very largely all have been sent when this sees print, but it is to be borne in mind that there are thousands of young Canadians in uniform in Canada, and presents for them will be a large factor in the trade. The necktie that once served as a gift for the boy will this year be replaced by a safety razor. No longer will shirts and stickpins be the articles upon which the gift-giver can fall back. The lad in khaki will get, instead, articles of a practical, durable nature that will add to his bodily comfort while soldiering, and consequently the hardware store, with its cutlery, leather goods, watches, etc., will be the strategic point of the shopping multitudes.

Taking everything in everything, the next five weeks should be unprecedentedly busy for the hardwareman.

Are you ready for the rush?

Cutlery and Silverware

The cutlery trade has always been the backbone of the hardwareman's Christmas trade. Razors, knives, carving sets, etc., have been in ready demand. Add to this the extensive and varied demand for all lines of silverware and plated ware, and the main item of the Yuletide programme is provided.



For reasons given above, the demand for razors, jack knives, etc., will be larger than ever before. There is every

reason to anticipate also that there will be an equal advance in the demand for plated ware, casseroles, and like items of a domestic nature. There is plenty of money in the family purse at present, enough to banish the scruples that have limited certain purchases in the past. There is a distinct tendency to "sort up" the household supplies, to replace the old knives and forks which have done duty since Uncle George gave them as a wedding gift, to relegate the old pudding dish for the up-to-date casserole, to fill out the assortment of pie knives and dessert spoons. In fact, the thrifty but proud housewife, with the plethoric bank book in the back of her mind, sees now the deficiencies in her equipment as items which must be attended to.

Yes, there will be heavy buying in such lines this year. It would be good business to make a special "set" on this class of trade, using advertising space to attract the attention of the housewife. "Set an attractive table" is a heading that should bring results from an advertisement.

Electrical Goods

A very important development has came about of recent years in the matter of electrical goods. Few households are now without electrical power, thanks to the extension of the power systems in all parts of Canada. And the number of articles of the utmost practical domestic value that can be operated by electricity has become a long one. Electric stoves, irons, toasters, coffee percolators, flash-

lights (or whatever the $3,000 name selected may be) are just a few of the articles that every householder is interested in.

For Christmas purposes, no line could be more attractive. An electric iron or a toaster makes an ideal gift for the matron—one that she will appreciate every day for the succeeding year and the years again that follow.

The spread of the hydro systems has done much to bring electrical goods to the fore. The report of the Hydro-Electric Power Commission of Ontario for the past year shows that during the twelve months no fewer than 28 municipalities were added to the list supplied with Niagara power. This is indicative of the huge development going on all over the country, and consequently of the remarkable possibilities in the electric specialty business.

Sporting Goods

Finally, there is the sporting goods section. This again develops into an active section when the gift-buying season starts. Nothing is more suitable for the boy than a pair of skates, a hockey stick, a punching bag, a sled, or any of the other articles that give him the oppor-

An attractive display of Christmas toys.

tunity to exercise his love of sport. In the larger centres the specialty sporting goods store is found, but in practically the whole of Canada the hardware store is the recognized spot for sporting goods. The hardwareman should defend his position against the many interlopers who are endeavoring to steal this trade away, especially during the holiday season, when demand is brisk.

Brassware, Cut Glass, etc.

Then there are goods which combine luxury with utility, appearance with practical value. In this class mention must at once be made of brass goods. Brass has ceased to be a fad, and has settled down into a line with a steady, growing demand. Jardineres, gongs, coffee pots, smoking sets, etc., are found in every home, and make gifts that are very highly appreciated. The hardware store is the logical place for such goods, and the dealer who gets together an attractive assortment and displays them to advantage can count upon a profitable volume of trade.

Cut glass is another line that can be featured for Christmas business.

Toys

Perhaps the one department of the hardware store which will stand an increase of attention most is toys. The trade in toys is pre-eminently the Christmas feature, for the gift-giving side of Christmas is maintained largely for the benefit of the children. At present the toy business, which used to centre to a very great extent in specialty and stationery stores, is now being divided more and more between the dry goods and the hardware stores. The five, ten and fifteen-cent stores are "cleaning up" on the cheap varieties. For the better grade of toys, however, the hardwareman sees his only formidable rival in the dry goods merchant. In the matter of metal toys, at any rate, the hardwareman should be supreme.

There are a large number of hardware stores where toys are sold not only at Christmas time, but all the year around in very considerable volume; in fact, where the toy department has become a very important one. Just to mention a few, there are O. M. Bell, in Halifax; McNab Bros., in Orillia, and Ingram & Davey, in St. Thomas. These are mentioned because articles have already appeared in HARDWARE AND METAL describing their toy departments; but the list could be continued indefinitely until it filled this column and included progressive merchants in all provinces of Canada.

Toys have this advantage for the Christmas trade: They bring children to the store, and that means that the mothers come along too and see the other lines that ordinarily they might seek elsewhere.

MAKING UP THE CHRISTMAS CARDS

Specially Planned for this Issue by R. T. D. Edwards

CHRISTMAS LESSON

WITH the Christmas season almost upon us and with the knowledge that fancy decorative Christmas cards will be needed to be placed on merchandise throughout the store, let all us cardwriters strive to prepare our work to avoid as much as possible that eleventh hour rush.

We all know how much work we will have in hand with fancy window backgrounds, to get out, windows to trim, with stores to decorate, with extra efforts in newspaper advertisements and with extra rush of customers; so it behooves us all to prepare now, and without delay, our cards and style of lettering while there is time to think with a good clear brain.

There are many ways in which we can avoid congestion of our work in the cardwriting line. One is, if you intend to use a certain style of lettering, get at it and practice until you have it in your mind's eye and able to form all the letters without reference to a chart.

Another is to have many cards designed already to letter. Cards with Santa Claus' smiling face in the corner, cards with sprays of holly and mistletoe, cards with wintry scenery which suggest the festive Christmas season and Old St. Nick with his prancing reindeers. These are only a few suggestions, which, when worked upon cards, impart that spirit of gladness which puts the customer in a better frame of mind to do their Christmas shopping.

To get these ideas it is necessary to collect every kind of Christmas material you can find. Many cardwriters save designs from year to year, taken from magazines, newspapers, Xmas cards and books of all sorts, and have these to refer to when an idea is required. If these are not obtainable, a search in the advertising office will reveal good material. If a suitable cut is obtained and only a few cards are wanted, the cut can be stamped on the card by first inking it off a pad, then placing it in the desired place on the card. Tap all over the back of the cut with a hammer. This will leave an impression visible enough to trace over with pen and black waterproof ink. When the ink is dry, color with transparent water colors in the natural shades.

From Picture Post Cards one can obtain many pretty sprays of holly that when cut out carefully and pasted on the corner of a card make good showcards.

The design around the chart shown in this lesson is a good one, which can be used for showcard purposes. This should be sketched with pencil first, then drawn with pen and black waterproof ink and then colored with transparent inks in natural holly colors.

There are some things which should always be kept in mind when making fancy cards, such as these. Don't put too much on it. When the card looks well enough leave it alone. Cards with little sprays of holly in the corner look better than a card with Christmas designs around the entire card, no matter how good the art work may be.

The lettering lesson this month is a modernized Old English. As you all know, Old English is a very difficult one to read quickly and that is the reason it has never been extensively used for commercial advertising, but many artists leave out a number of the lines and curves. They just take the main part of the letter. This gives a clear, readable letter without losing the characteristics of the Old English alphabet.

In the chart shown, there is a collection of letters which may be called

modernized Old English, and I think that you will agree that they make a better card for modern merchandise advertising than do the older type. "Read as you run" must be the cardwriter's motto.

THE CHART

Upper Case

"A" is a four stroke letter. Care must be taken to get this letter balanced up evenly. Strokes 1 and 3 should be at the same opposite angles.

"B" is a letter that requires much practice. Special attention should be paid to strokes 4, 5 and 6. Put them together to appear graceful.

"C." This letter is not so difficult to form, as the "B." Note how stroke 1 sweeps under and projects out beyond the other part of the letter.

Stroke 2 of "D" you will find to be the most difficult in that letter. It requires much practice and is a good suggestion for the practice exercise.

"E" and "F" show similar formations and have the same number of strokes. These letters can be made very quickly because all strokes have the some sweep to them. Stroke 5 of "E" is made shorter than that of "F."

The "G" shows much the same formation as "C," with strokes 5 and 6 added.

"H" is made in many forms, but this one is selected because of its gracefulness. Strokes 1, 2 and 3 make excellent food for practice work. Note the relation stroke 4 has to the two outside parts of the letter.

The only difference between "I" and "J" is in stroke 3. In these two points the letters must be made to differ pronouncedly, so that one won't be mistaken for the other.

The "K" is a nice letter to make. See that stroke 5 does not extend to the right any further than does stroke 6. Note how often strokes 1, 2 and 3 appear in other letters.

The "L" is the same as the "E," with the centre stroke left out.

"M" is made in many varieties. This makes a good, readable letter. Note the round finish of stroke 9 instead of the square.

In "N" we have the combination of strokes 1, 2 and 3, which so often appear in other letters. Practise these often.

The "O" is an interesting letter to make. Note that the beginning of stroke 4 is made straight before it starts to curve. Stroke 2 must be at right angles with the guide lines.

"P" is made of 5 strokes. Strokes 4 and 5 are good ones to select for practice work. You will find that this letter needs a lot of attention so as to make it appear graceful.

"Q" is a reputation of "O" with stroke 5 added.

The "R" shows the same number of strokes as the "P." Note that stroke 5 projects slightly more to the right than does stroke 4.

"S" is said by beginners to be a stumbling block, and there is no doubt that it needs a good bit of attention. The difficulty is in placing strokes 1 and 2 together, so that they will appear graceful. Stroke 4 should not extend as far to the right as does stroke 2, and stroke 3 should be about even with that of stroke 1.

Stroke 2 of "T" needs much practice, as it is the only appearance of this stroke throughout the alphabet.

All the strokes of "U" are shown in other letters. Note how close at the top of the letter strokes 1 and 3 are placed.

The "V" shows a reverse of "A" with stroke 4 omitted. Care must also be taken to get the strokes 1 and 2 at the proper angles.

"W" shows a nine-stroke letter. Stroke 1 shows a little variety in the beginning.

"X" is not a difficult letter to make, but nevertheless you will find much practice necessary before it can be made properly. Stroke 2 is made with the narrow side of the brush.

This is only one of the many forms of "Y" that are used in modernized Old English. Note the graceful appearance of the entire letter. The join of strokes 4 and 5 should be made so as to appear as one continuous stroke.

"Z," while not used as often as the other letters, its formation should be known off by heart.

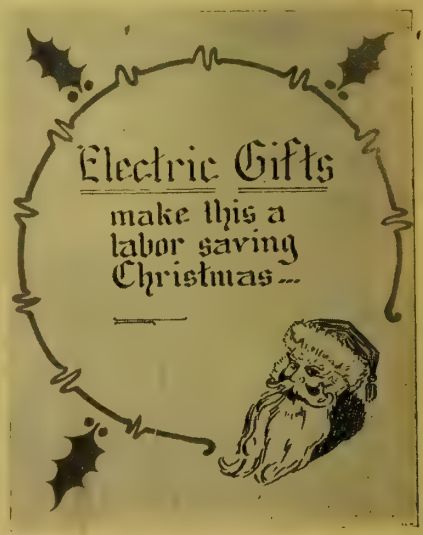
The sign "&" is one that is used every day in the daily work of a cardwriter. This is only one of the many good forms that can be made.

The word "Modern" shows different style letter formations which are only examples of different varieties of letters.

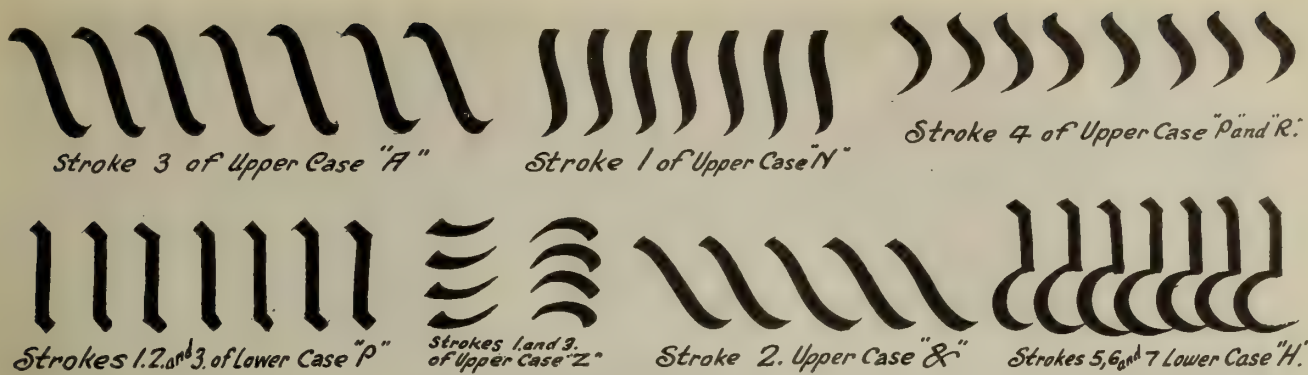
Lower Case

The lower case alphabet shows much the same straight line strokes, with very little curve, so they need little or no explanation.

Follow the numbers indicated, and draw the brush in the direction the arrows are pointing and you should find little difficulty in mastering them.



The lower case letters should be kept as plain as possible because they form the body of the words, and the plainer letter makes the word more readable.



Practice Work

The student must never forget the importance of practising the various strokes, especially when a new alphabet is taken up. The strokes of the modernized Old English lettering are somewhat different to those shown previously in these lessons. Pick out the strokes that are the most difficult for you to make and practise them as suggested in Fig. 1, only practise them many times more than is here shown. You will note that combinations of strokes are shown to be practised together. This is especially good exercise. These with practice can be made without lifting the brush off the card.

Practice Exercises—Fig. 1.

As in all other lessons when brush stroke letters are taught, it is absolutely necessary that you keep the brush with a flat chisel point in order to get the desired effect that this type must have. Fill the brush first with color and then work out on a piece of waste card or glass to a good working flat point.

It is a good practice to have a few greeting cards around the store, placed in prominent places so that they may be read by the customer. These should be more decorative than the ordinary merchandise card. These can be made up in very attractive designs and colorings. Different wordings can be used as follows:—

"We extend to our many customers a happy and prosperous New Year."

"To one and all a Merry Christmas."

"We wish you a Merry Christmas and prosperity during the coming year."

"Remember the soldier boy. Ask about our Xmas Overseas Boxes."

The card, "The Season's Greetings," shows a very decorative design. The black outlines are made with black waterproof ink. The background which appears grey can be made any pale neutral shade. The holly and poinsettia are of natural colors. The circle is of bright red with darker red spots. The lettering is of a semi-script formation. It is outlined with a stub pencil and filled in afterwards. This type is shown for a variety from that shown in the lesson, but the modernized Old English is just as effective.

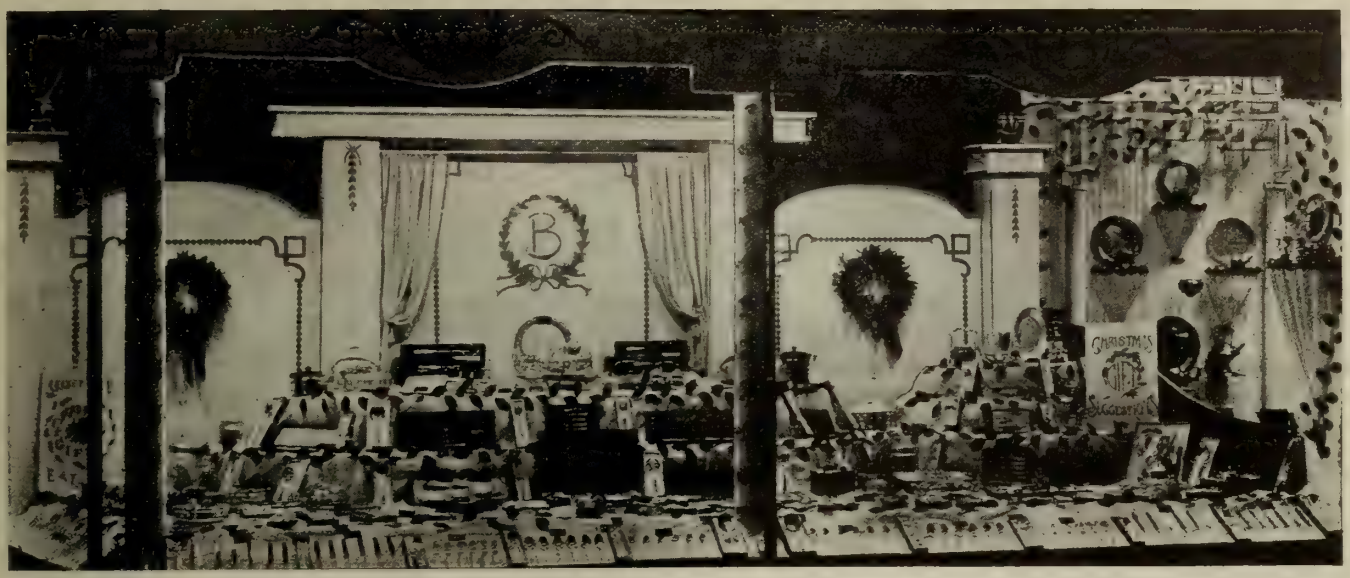
The accompanying card illustrates the use of the alphabet shown in this lesson. This card is an example of a good Christmas card.

A practical Christmas display in the store of F. W. Jeffery & Sons, Midland, trimmed by Albert Dalton Buchanan.

Trimming the Christmas Windows

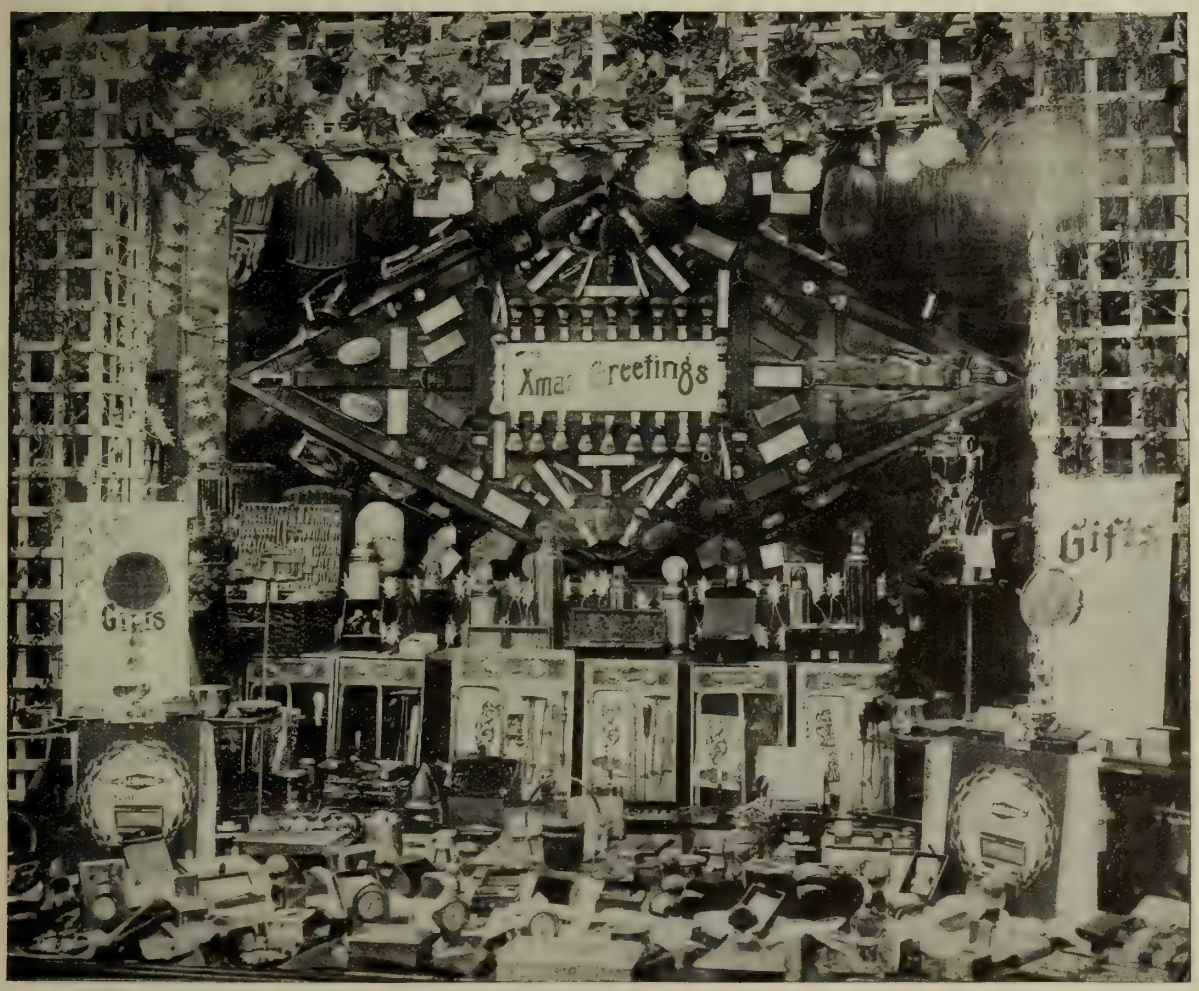
Some Practical Suggestions for the Hardware Display Man — Get "Selling Force" into the Trims—The Value of Price Cards at This Season of the Year— Some Especially Good Trims.

THERE are two ways in which the hardwareman can increase his Christmas sales most readily and tangibly — newspaper advertising and window displays. The advertising question is dealt with elsewhere. In the matter of window displays, the best advice that can be given is to change the trims as often as is possible during the holiday season and to aim to put selling force into them.



It is a fact seldom recognized that many of the most elaborate and artistic displays lack selling force almost completely. An earnest, ambitious window trimmer will sometimes put a great deal of time and effort into a display that, from the standpoint of sheer pulling force, is an absolute failure. Sometimes windows, which attract large crowds fail utterly to create business. A case is recalled where a very fine window—fine, that is, from the artistic standpoint — was put in during the early stages of the Christmas rush. It had a background to represent a pipe organ, made up of hardware goods entirely. It was clever and ingenious to a degree and attracted a great deal of attention. People crowded to look at it and told their friends about it and they in their turn came to look. In this way the store got a lot of general publicity, and so the window was not entirely valueless. At any other time of year it would have been a great stroke of business, but unfortunately it used up valuable window space at a time when people were in the buying mood and were in interested in **goods** and **prices.**

The articles displayed were very much in the background and few sales could be traced to the display itself. It did not possess direct pulling force. Next week they put in a display that consisted solely of a varied assortment of goods neatly arranged and prominently priced. It sold goods like wildfire. People were able to get practical advice from that display in the selection of their gifts. The first window interested them, but it did not **sell** them.



The Matter of Price Cards

A second injunction that should be laid on the window trimmer at this stage of the year is in the matter of show cards. It is, of course, a matter of universal agreement that cards are needed to brighten up a display and present selling talks on the goods shown. There is still some difference of opinion, however, on the question of the advisability of displaying prices. The controversy on this point, once a very wide one, is gradually dying out for the opponents of the price idea are gradually being won over. It is now very generally regarded as necessary to display prices in order to put real selling force into a window display. If the price is right, there is no need to fear the opposition. The other fellow knows your prices pretty well anyway. It is particularly important to use prices in Christmas windows, as the average shopper is in a hurry and desires to make selections as rapidly as possible. The shopper has two considerations in mind—getting the right article at the right price. He may be able to pick the right article from the assortment in your window, but that is only half the information wanted. If the price is not in the window the shopper may come in to ask about it—or he may go on to the next store. Experience shows that in most cases he goes on to the next store. HARDWARE AND METAL feels that too much stress cannot be put on this question of the use of price cards at this season of the year.

Practical suggestions for Christmas trims will be found in the accompanying displays. These are windows submitted in HARDWARE AND METAL'S contest and selected at the present time as offering the best ideas for the window trimmer to follow.

A Christmas window trimmed by Chas. Byford, of the Bond Hardware Co., Guelph, which was awarded first prize last year in HARDWARE AND METAL'S *Christmas Window Contest for places over* 5,000.

A Christmas window trimmed by C. H. Smith, for the J. H. Ashdown Hardware Co., at Calgary, winner in a HARDWARE AND METAL *contest.*

Writing a Christmas Advertisement

Two Points Must Be Borne In Mind—Give the Facts and Make Your Copy Distinctive—The Christmas Advertiser Has a Ready Audience—How to Achieve Originality

WRITING a Christmas advertisement is at one and the same time a most easy and a most difficult task. The easy part of it comes from the fact that the advertiser is appealing to a public anxious to buy. There are few Scrooges nowadays. In fact, it is very doubtful if even Old Scrooge would be able to resist the influence of Christmas cheer so long in this age of universal gift giving. Everyone has a list of gifts to secure, and a thirst for knowledge as to how the list can be filled most satisfactorily and economically.

This means that the advertiser is not forced to scale the ramparts of public indifference as is so much the case at other seasons. He does not have to compel an audience by the sheer mastery of his copy. Instead the audience is already there and in a receptive, even an eager, mood. All he has to do is to "trot out" his stock in trade—tell about his goods, give the prices, and hint at the excellence of his service.

The very easiness of Christmas advertising, the surety of wide attention that it enjoys, suggests the first essential of advertising copy. It must give facts. It must tell the shopper the points about the goods and the price. Generalities won't do. The Christmas shopper, picking up the newspaper, is in much the same position as a buyer opening tenders. He has certain requirements that must be filled. What have you to offer? If you don't tell him, your tender receives no attention. It is brushed aside.

And so, to repeat, the first essential is to give all the facts.

The difficult part of Christmas advertising is that the competition is keener than at any other time. Every merchant more or less, realizing that this is the time to advertise, is out doing it. This is the time of year when the news columns in the newspapers shrink and the volume of reading matter falls back routed and broken before the advancing columns of heavy type advertising. The papers bristle with appeals to the shopper.

And so, the advertiser faces this difficulty that, having his public in a buying mood, he must fight for favor against more competition. This suggests that copy to be effective must be a little different from other ads. It is the time of year when the advertisement must have originality and a personality of its own. A cut of Santa Claus and a heavy head line is not sufficient. The grocer, the dry goods man, the bookseller, are all doing that. The public must get tired of these antiquated cuts that are hauled out from the drawer, dusted off, and slapped into the middle of splurges of type each year.

It is the belief of the writer that almost any kind of copy, provided that it is definite, will "go" at Christmas time—to a certain extent. The sheer obesity of the demand accounts for this. But it takes advertising with a distinctive touch to bring the big results that every advertiser hopes for.

It is a hopeless task to make any suggestions as to how originality in advertising copy can be achieved. Probably the best advice to give is to "put yourself into your copy." Talk naturally and truthfully about the goods you have to offer.

Much can be done in the way of achieving originality in the matter of lay-outs. Pay particular attention to the setting up of your ad. Do not let the printer put you off with an arrangement that does not appeal to you as attractive. Insist on it being neat and dignified. This in itself will give it a certain originality and distinction.

Christmas Window Contest

FOR *many years past it has been customary for* HARDWARE AND METAL *to conduct a Christmas window display contest each year. The contest has become an event of wide interest for all Canadian retail hardwaremen interested in window trimming, and each succeeding competiton has been keener and each year has seen a wider and more representative response culminating in the big success of last year.*

In accordance with past custom, two contests will be conducted this year—one for stores in places under 5,000 population, the other for places of 5,000 and over. No restrictions will be set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade.

Eight prizes will be offered as follows:—

PLACES OF 5,000 AND OVER		PLACES UNDER 5,000	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town window trimmer as to those in the larger towns and cities.

The contest closes on Monday, Jan. 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, *143-153 University Avenue, Toronto," and marked "For Christmas window contest."*

Cash Discount--Its Uses and Abuses

What Should Be the Attitude of the Buyer and Seller?—Reasons for Abuse of Discount Terms—Bad Effects of Abuse of Cash Discount Terms

THE cash discount for prompt payment, so closely watched and taken advantage of by some retail merchants, meets with considerable abuse at the hands of others. Just at this time when there is so much talk of a proposed general shortening of credit terms, and in fact some manufacturers actually adopting shorter terms, the question is a live one.

At almost every meeting of credit men the "cash discount" question crops up and there is a general discussion on the subject.

The National Association of Credit Men recently issued a pamphlet on the subject, in which it is pointed out that the relation of buyer and seller is reciprocal. Certain obligations are assumed by both, and when either neglects or violates these obligations he hurts business and injures the credit system. Because the neglect or violation is due so frequently to misunderstanding and indifference, the National Association has treated the subject of the cash discount in an elementary way so that its character and the strict need of its observance may generally be understood.

Cash Discount Not Trade Discount

The term "cash discount" was not a happy choice for it does not give to the buyer of merchandise a clear understanding of what it is. It is unfortunate because so often confused with the trade discount, but there is no similarity at all between the two and the confusion leads to misunderstanding and abuses. The cash discount is a premium allowed by the seller of merchandise to a buyer should the invoice be paid within a specified period—usually a short time after shipment.

If a seller of hardware were to offer a buyer a keg of nails, or a seller of groceries a certain number of pounds of sugar provided the invoice were paid within a few days after shipment, the principal is identical with an allowance to the buyer of a certain portion of the invoice if it is paid within a specified time. The credit men state that the cash discount, therefore, is a premium—nothing more and nothing less—and to look upon it in any other light breeds injustice and brings about confusion.

Cash Discount Part of Contract

The seller of merchandise offers to the buyer a premium in the form of a discount to be deducted from the invoice if remittance is made within an agreed upon period.

The buyer of merchandise is informed at the time of sale and on the face of the invoice that such premium will be allowed if the remittance is made within the specified time. The cash discount is, therefore, a part of the sales contract and must be given the same consideration and regard as the buyer would give to other features of the contract and in his treatment generally of the purchase. To claim a shortage when there is no shortage would not be any more improper than to claim a cash discount and demand the premium after the period has elapsed within which it was to be given. The cash discount is therefore to be honestly and fairly used.

Violation of Sales Contract

When the buyer of merchandise understands that the premium or cash discount is to be deducted should his remittance be made within ten days after shipment, he cannot but see that to remit in twenty days and deduct the discount is a violation of the sales contract.

Should the buyer exact of the seller a longer time in which to deduct the premium than it is the custom of the seller to give to other buyers and even if the privilege is a part of the sales contract, an abuse occurs for the reason that a discrimination takes place and the premium has lost its real purpose and becomes in effect an arbitrary deduction.

Buyer Should Reciprocate

Should the buyer claim that he had not received the merchandise within the discount period and for that reason demand the cash discount after the exporation of that period, an abuse also occurs for the reason that the time required for the receipt of the merchandise was not a part of the cash discount terms. As the seller has given his confidence to the buyer by shipping the merchandise on open account, so the buyer should reciprocate the confidence and believe that the seller will correct any errors that might be discovered in the execution of his order, and remit the invoice within the agreed discount period if it is his desire to earn the premium. Any treatment of cash discount terms that does not hold in view the fact that it is a premium, or that tends to exact or demand the premium when unearned, is an abuse of the system and has occasioned much of the dissatisfaction that is now felt toward it by credit grantors.

Buyers Sometimes Use Threats

If the seller of merchandise is not strict with his customers about the observance of cash discount terms and uses this indulgence as a selling feature, to patronize such sellers for the sake of such indulgence places a premium on unfair discrimination and encourages forms of recoupment that do not show on the surface, yet should be apparent to the buyer when he considers that the same values and treatment may not reasonably be expected if the cash discount in one instance has to be taken within a specified time, and in another instance may be deducted whenever he is pleased to remit. Trading on a cash discount induces demoralization in business and if a buyer of merchandise makes it a custom to take the discount whenever he pleases and not according to the terms of the purchase, he will unconsciously drift into other bad methods that may eventually impair his prospects and affect his abilities to buy at the best prices.

When a seller of merchandise fearing the threat of a buyer who demands the cash discount after the expiration of the discount term, allows the premium there is encouraged thereby a come-back to offset the deduction and nothing, perhaps, is so detrimental to business or in the intercourse of men in the credit relation, as the secret allowance of unjust and unfair deductions.

For the same reason that a contract under seal should be observed, so should cash discount agreements be observed and violations may not be excused because the contract is not in writing.

If Conditions Were Reversed?

Chief among reasons for the abuse of cash discount terms is that the premium is taken by the buyer and not directly given by the seller.

If, at the origin of the cash discount system provision had been made that should the buyer remit for the invoice within a specified time the seller would send him a cheque for two per cent. of the face of the invoice or give his account credit for that amount, the history of cash discount terms would have been quite different; but as the buyer has power to take the premium in remitting, he has felt too frequently that rather than lose the cash discount he would exact it, no matter when payment is made and use threats if his exactions are opposed.

The giving of the premium has encouraged abuses also. When buyers for large enterprises are driving hard bar-

"Perlmutter & Co., iron and metal merchants, of Dusseldorf, have gone into bankruptcy."—News item.

IT IS quite apparent that Mawruss should have stayed in the cloak and suit business. If Potash is a partner still, imagine the things Abe has been saying!

DO 90% OF RETAILERS FAIL?

THAT ninety per cent. of those who engage in the retail business either fail or quit is an oft-repeated statement. The expression is frequently used by writers who do not take pains to investigate and find out for themselves the extent of the mortality among retailers. Such statements have a depressing effect upon many among the ranks of the retail merchants. All available statistics show that as far as the hardware trade is concerned the statement is incorrect. This is particularly true regarding the hardware trade in Canada. That the statement is also incorrect when applied to the retail hardware trade of the United States, is proven by an investigation conducted by the National Hardware Bulletin of the National Retail Hardware Association of the United States. The National Association is a large and powerful one. The records of this association and three of the most representative affiliated associations show that.

The records show that last year the per cent. of business changes taking place was almost exactly ten per cent. Deducting from this the number of changes caused by death, consolidations, exchanges, retiring to enjoy the fruits of a successful business, and it leaves about five per cent. due to failure or near failure.

Also, further investigation discloses that fully two-thirds of those dealers composing the Association can show a large and prosperous increase in their investments, sales and financial worth since they first engaged in business.

There are undoubtedly some who, as the saying is, are "hanging on by their teeth," but not all of these are going to fail. Many of the most successful members at one time had a hard struggle to get established, but eventually they made good, and the same will undoubtedly be the case with many of those who at the present time are not well rated.

So far as the retail hardware business is concerned the chances for success in it are high for those who are willing to pay the price in work and study. A statement that 90% of those who engage in the retail hardware business fail or go out of business is very misleading, and far from being correct.

THE CHRISTMAS TRADE

THE present issue is devoted very largely, so far as the special articles are concerned, to the Christmas trade. It is an important subject. The average hardwareman has never secured as large a share of the holiday business as he should; and he will lose this year also until he makes an extra special effort.

It is probably true that many hardwaremen have

not realized to the fullest the possibilities in their stock from the standpoint of Christmas merchandising. The hardware store is filled with articles that either are very much in demand for gifts or should be. Let us suggest that every reader make a mental inventory of his stock with this in mind, select the articles that can be featured, replenish the stock wherever necessary and then, to borrow a slang phrase "go to it."

And, finally, as an early start is necessary, do it now.

SHEFFIELD AFTER EXPORT TRADE

DESPITE the fact that Canadian importers have found it exceedingly difficult to secure shipments of much needed cutlery and tools from Sheffield, it is quite evident that Sheffield manufacturers and the British Government realize the importance and necessity of keeping up export connections. According to the *Ironmonger,* a leading English authority, the question of overseas trade is now receiving a good deal of attention. Manufacturers are being urged by the Government Department to keep up their exports to the highest possible level, and at the same time the military are endeavoring to comb out all men under forty-one years of age not actually employed on war work. Recent enlistments have tended to limit export trade, which must suffer still more if the present drain continues. Season orders for farm and garden tools and implement parts are now flowing in from foreign and colonial markets, and some makers report that they have already booked as much work as they will be able to execute with their depleted staffs. Makers of cutlery and some classes of tools report a considerable reduction in Government requirements. However, Sheffield has very little to sell at any rate in the home market, which is not needed for the military authorities. There is still a great scarcity of steel, except for munition purposes. One bright feature is that of late makers of cutlery and some classes of tools report a considerable reduction in Government requirements, thus indicating that in some departments of the army there is now an ample supply of equipment.

ADVERTISING PRICES

IN last week's issue appeared an article on the question of trade agreements not to advertise. The folly of these agreements is pointed out so clearly that further reference to the subject is not necessary here. One point, however, will bear further reference, and that is the question of advertising the prices of goods.

There are still plenty of merchants and manufacturers who believe sufficiently in advertising to do a certain amount of publicity work, but who nevertheless do not believe it advisable to quote prices in their copy. Their reason generally is that they are afraid of giving information away to their competitors.

This is quite futile caution, for competitors can find out all about prices anyway; and do. The fact of the matter is that, in advertising, a business man should think of nothing else but the people he is advertising to.

And the only way to get the attention of the public to-day is to quote prices. People want to know all about an article before they buy it and, first and foremost, they want to know the price.

How much business would the mail order houses get if they did not price every article in their catalogues? Instead of operating from fifteen-storey buildings they would be sending out puny circulars from dingy offices up back stairs.

STEEL OUTLOOK IN PEACE TIME

HARDWARE AND METAL has referred on a number of occasions to the largely increased production of steel in the United States and to the rapid development of production in Great Britain. It is now given out that both France and Germany are also so equipped as to ensure steel outputs largely in excess of their domestic requirements in the coming peace time, notwithstanding obviously necessary rebuilding and reconstruction demands by one at least of the two countries referred to. The fact that the former has already doubled her 1915 output, in spite of the past two year's occupation of much of her iron ore territory by Germany, is especially significant. Neglecting Belgium for the time being, as in her case the return to even her normal steel output is likely to be more or less delayed, we anticipate a merry scamper for post-war supremacy in the world's steel markets with Britain, France, the United States and Germany figuring as giant contestants.

A full appreciation of what such an eventuality will mean to Canada either with regard to projected export trade, or what is equally important, her domestic trade, has not as yet been fully, if at all realized. We are prone to assume that the belligerents have had their hands so full of fighting that even with the provision of the wherewithal to prosecute same in satisfactory measure, their steel production capacity has not been developed to such an abnormal extent as to give them individually a hitherto unparalleled preponderance in peace-time. The capacity of Canadian steel plants as a result of war munitions requirements has very materially increased, comparatively, and the same may be said with respect to the steel enterprise of the United States. In neither case, however, has the development been such as to promote a comforting peace-time prospect; rather the reverse, judging from diagnosis of the outlook by interested and competent authorities in the latter country.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

Prices of hardware continue to soar, and this week another heavy list of price changes has become effective. Products which have advanced during the week include wire nails, cut nails, lap and buttweld pipe, heavy and light tee and strap hinges, wrought steel butts, sash weights, malleable fittings, stove pipe, handsaws, trowels, rivets and burrs, wooden tubs and pails, hemp cordage, brass escutcheon pins, borax, measuring tapes, glass boards, board and log rules, iron and steel products. New lists and discounts have been issued on bright and brass wire goods. Business is decidedly brisk despite the high prices now in effect. Collections generally are good, and a large volume of Christmas trade is looked for by the retail trade. The fact that Canadian munition orders will keep all plants busy during the first half of 1917, and that many American steel plants are booked to full capacity for 1917, would indicate that lower prices on steel goods will not prevail for many months to come. Further advances are expected on wire nails, pipe, black and galvanized sheets. All ingot metals have shown considerable additional strength this week and prices on copper, spelter and tin have advanced to higher levels. The linseed oil market is very unsettled and during the week quotations were withdrawn at times.

MONTREAL MARKETS

MONTREAL, Nov. 22.—While the rush of business for shipment before close of navigation is now about over, the general trend of trade in hardware lines is still excellent, and business heads and employees are busier it seems than ever. Prices show still firmer trend, in fact experienced hardware men are beginning to look on the rising markets with concern curiously contradicted by the fact of the evident demand for the goods. Most especially in certain lines of the heavy metal trade is trouble felt, however. A marked shortage of iron plate and sheet materials exists. Tin plate, and tinned iron sheets are lamentably lacking. That a marked advance in prices of galvanized sheets is coming rapidly is the note of warning sounded by every storm signal of the metal markets, and dealers or users of this material who are not well supplied, are advised to do their best to book orders for supplies even though some mills are already refusing to accept further orders. Lap and buttweld pipe prices are again increased, though an increase was announced only last week. Still further advances are expected by the trade concerned. Many other lines are up, and leather goods are affected by the great firmness in this material All the metals show firmness. Seasonable lines are rapidly moving at enhanced prices in many cases. Builders hardware is up again, and lumbermen's implements are increased in price, also important lines of wire, and several lines in cotton made commodities. Shelf goods show advances, and amongst details in these lines are Canadian made locks. Incidentally also in opinion of the trade generally "The day of the cheap alarm clock is done."

Tremendous Firmness in Iron and Steel

IRON AND STEEL.—The important problem for all large scale consumers of these indispensable metals is to their orders booked by the mills at all. Over booked with orders away into the latter months of 1917, and the first six months of 1918 the great milling concerns are now at the stage of refusing to book further orders, and price cuts less ice than ever with them. Users of iron and steel are already in anxious times as regards delivery. Short of the end of the war, there is small hope of relief, and for long after the end of the war it is likely that iron and steel prices may remain extremely firm.

Iron Pipe Goes Up Again

Only one week has passed since altered and higher prices were published by HARDWARE AND METAL as regards lap and buttweld pipe. This week again the prices of lap and buttweld pipe go further upwards. The new prices are shown in a panel elsewhere in this issue.

The End Is Not in Sight

This second increase within seven days in pipe prices is declared by the best authorities to be but a preliminary. Prices of iron pipe will beyond doubt go still higher, perhaps very much higher. Both lap-weld and buttweld pipe will increase in cost. Production of these pipes is affected by the abnormal condition of the iron and steel market.

Pipe Fittings Up With Pipe

Increased prices for pipe, which may be still further advanced very soon, are accompanied by increased prices also for pipe fittings as follows:—All pound goods, 20 per cent. off instead of 25 off as formerly, Malleable bushings 52½ per cent. off: Cast bushings 52½ per cent. off: Plugs 50 per cent. off; Malleable unions, 55 per cent. off.

Big Advance Due in Iron Sheets

A very material increase in the price of galvanized iron sheets, and also of thin black sheets is absolutely certain to take place before very long. The situation is aggravated by the fact that it is even at the present stage, almost impossible to get supplies of these. The mills are already refusing to quote prices on these lines. On the advice of a reliable authority in close touch with the situation, interviewed by HARDWARE AND METAL, any dealer who requires galvanized sheets in his business, or the thin black sheets which are in the same position as regards the market, and who is not sufficiently well stocked to take care of probable needs for the next few months, would be wise to cover his requirements quickly while there is yet time to get supplies at present quotations. What is coming no man can infallibly predict, but galvanized sheets are in for something like famine conditions short of a market, or manufacturing miracle.

Tinned Iron and Tin Plate Too

A marked scarcity of tinned iron, and of tin plate is also noted on the markets this week, and in these lines the outlook reveals little in the way of even remotely possible relief. Those who can get supplies, or secure delivery of orders, or even secure booking of orders at present prices not subject to revision as markets alter, may consider themselves lucky.

New Bolt and Nut Prices Effective

Not announced in Montreal as early as in Toronto, but duly published in last week's HARDWARE AND METAL, the new prices on bolts and nuts became effective in Montreal on Saturday 18, Nov. An average advance of 5 per cent is noted here.

Cut Nails Advanced

Once again cut nails have advanced in price. The base price for this line is now $4.00.

Wire Nails Increased Again

Wire nails also share the general trend of the market for all commodities made of iron or steel. Following are the new base prices: f.o.b. Montreal, Gananoque, Collingwood, Owen Sound, $4.25 base; f.o.b. Toronto, Hamilton, Milton, London, $4.20 base; f.o.b. Sault Pt. Arthur, and Ft. William $4.35 base; f.o.b. St. John, N.B. and Sidney, N.S., $4.25 base.

Barbed and Twist Wire Up

Barbed wire is now quoted at $5.00 per 100 lbs., and plain twist wire at $5.50 to $5.60 with the higher figure most likely to last.

Galvanized Wire Increased

Further advances are noted in Montreal this week on galvanized wire. No. 6 and No. 8 are now listed at $5.45, No. 9, is $5.00, No. 10, $5.50, No. 11. $5.55, No. 12, $5.15, No. 13, $5.25, No. 14, $5.15, No. 15, $6.35, and No. 16, $6.45.

Coil Spring Wire Up Also

New prices on coil spring wire are quoted this week for No. 9 at $5.05, and No. 12 at $5.20.

Axes Again Advanced

Axes have again advanced in price, being raised a further 50 cents per dozen.

Files and Rasps Up

The former discount off list prices of Disston rasps and files has been altered to 55 per cent.

Lumbermen's Hardware Up

All lumbering tools, peevies, peevie handles, etc. and logger's implements (not cross-cut saws so far) have been increased in price by from 10 to 15 per cent.

Wheelbarrows Up in Price

Price on garden and navvy wheelbarrows have been altered, the navvy steel-heel being now $37.50 per doz. Garden steel wheel $48.00 doz. Heavy garden and heavy farm barrows are still quoting at $3.75 each.

Sash Weights Up

In line with the increases in price of metals sash weights have to be quoted higher per 100 lbs. Sectional sell at $3.40 now instead of $2.40 both in the 1 lb. and ½ lb. sizes. Solid per hundredweight are $2.25 instead of $1.80.

Shelf Goods Show Further Increases

Tap Soles Up Again

Last week HARDWARE AND METAL announced the change in price of tap soles. This week a further advance of fifty cents a dozen is on record. The tendency of all leather goods is tremendously towards firmness now.

WIRE AND CUT NAILS STILL CLIMBING

Another advance of 10c. has taken place on the price of wire nails. The new price on nails follows:

F.o.b. London, Toronto, Hamilton and Milton .....$4.20 base.

(Freight equalized on above points.)

F.o.b. Montreal, Gananoque, Collingwood, and Owen Sound ..... $4.25 base

(Freight equalized on above points.)

F.o.b. Port Arthur, Fort William and Sault Ste. Marie..$4.25 base

Windsor and Walkerville, f.o.b. factory points, carload freight allowed ..... $4.27½ base.

Cut nails have advanced 30c. per keg and are now quoted at $4.00 base Fo.b. Toronto, Hamilton, Montreal, London.

Sporting Goods Increased

All of the Reach sporting goods, baseball outfits, punching bags, all leather goods of the list, and every other line also show advances from 10 per cent. to 25 per cent. towards.

Cotton Gloves Up 25 Cents

Cotton gloves are increased in price by 25 cents per dozen, and all cotton goods may go higher yet.

Cotton Twine Increased

Cotton fishing twine No. 6 is now 44½ cents a pound, No. 9 is quoted at 39 cents, No. 12 at 38 cents, numbers 15 to 36 are all at 37½ cents, and Numbers 42 to 100 are quoted at 37 cents.

Sand Paper Advanced

Sand paper shows an advance locally in price this week, but the exact percentage of advance has not been figured out by the wholesalers. The condition of the market for the materials of production would account easily for a considerable increase. The present increase however, is said to be just to show the tendency.

Sleigh Bells Up

"Bells on Bob-Tail" will ring in perfect accord with the time of the metal markets to-day, if the owner of that sleigh horse renowned in song, has to buy a new set this season. Sleigh bells are up 5 per cent.

Rope Shows Increase

New list prices on some lines of cordage show prices as given in current quotations for the principal lines. Cotton rope 1 to 16 in. is now quoted at 0.37 cents, and ¼ in. and up at 0.36 cents.

Builders Hardware Up

Builders hardware though in slack demand at this time of year shows an increase on various lines amounting to from 5 per cent. to 10 per cent. All lines are affected more or less.

Canadian Locks Increased

The principal lines of made in Canada locks are up in price by about ten per cent. These include the Belleville, The Springer Mfg. Co., the Canada Yale and Towne, The Peterboro', Nat Hardware, and Hamilton Hardware lines of locks, all priced by different lists so that to estimate the exact advance is difficult.

Hinges and Butts Up

A 10 per cent. advance is noted also on all wrought butts, and heavy and light strap, and "T" hinges.

Copper Firmer, Also Lead, Tin, Solder

OTHER METALS.—Unvarying firmness, and changes only in the upward direction characterise all the metals on the market apart from the iron and steel which set the upward pace.

Copper Still Firmer

Quoted last week at $38.00 (highest quote) copper is this week at $39.50 (lowest quote) and $40. Bought in much larger quantities (if obtainable) slightly easier figures might be discovered, but the market for copper is exceedingly strong as will be noted from quotations in current list this week.

Lead Still Stronger

With prices quoted as last week viz. $9.75 to $10.00 lead is noticeably firmer

still, and in strong market. The paint manufacturing business notes the tendency in pig lead, and remarks upon it.

Tin Still Higher

The strength noted in tin last week is borne out this week, by increased prices, quotations being now $49.50 to $50.00 as compared with last week's highest $48.50.

Sheet Zinc and Spelter Firm

Sheet zinc is quoting firm as last week at 25 cents to 25½ cents, and spelter at $14.50 to $15.00 also as last week. Antimony shows no variation from the 16 cents quoted last week.

Solders Are Higher

Tinsmith's and wiping solder are higher in price. The first mentioned (tinsmith's) now quoting at 31 cents instead of 30 cents, and the second (Wiping Solder) at 29 cents instead of 28 cents.

TORONTO MARKETS

TORONTO, Nov. 24.—One of the serious factors at the present time is the embargo placed on shipments in small lots coming to Toronto by both the C.P.R. and G.T.R. Wholesalers in these instances are unable to get their small freight shipments through. In car lots, however, the railway companies will bring in the goods. Many of the wholesalers are utilizing the express companies where formerly they had their goods shipped by freight. This service, with the extra tax put upon it, is also becoming little better than freight conditions, according to some of the wholesalers. The freight situation is aggravated by the scarcity of help and the recent strike on the C.P.R. of freight handlers. A shortage of goods in many lines still continues.

Iron Pipe Goes To Higher Levels

New and higher prices have gone into effect on most sizes of buttweld and lapweld iron pipe. On some sizes this is the third advance within a month. The new prices are shown in a panel elsewhere in this issue.

Wire Nails Up 10c Cut Nails Up 30c

NAILS—Wire nails have advanced 10c per keg this week and are now quoted at $4.20 per keg base at Toronto. The market is decidedly firm and further advances would not come as a surprise. In the United States market wire nails are now quoted at $2.85 a keg Pittsburgh, and authorities state that the price will probably go to $3 or $3.25 a keg before the second quarter of next year. Other wire products it is said will register corresponding advances in price. Canadian interests have recently attempted to secure large tonnage of wire rods in the United States, but United States interests have been unable to take the business offered. With a scarcity of wire rods and prices continually advancing, it is not unreasonable to expect further advances.

Cut Nails Up 30c

CUT NAILS—Quotations on cut nails have advanced about 30c over the former price of $3.70. This week three prices were quoted on cut nails in Toronto—$4—$4.05—$4.10—$4.25 per keg base.

Bright and Brass Wire Goods Advance

A new list has been issued on bright and brass wire goods. The new discount on bright goods is 82½% off list; on brass the discount is 70% off list. The new list is shown in a panel elsewhere in this issue.

IRON PIPE GOES STILL HIGHER

Still another advance has taken place on buttweld and lapweld pipe. This is the third advance this month.

	Per 100 ft. Black	Galvanized
Buttweld—		
⅛"	$ 3 50	$ 5 00
¼"	3 30	5 43
⅜"	3 20	5 43

10" L	176 00	235 20
10"	226 60	302 80

Prices for Ontario, Quebec and Maritime Provinces.

Poultry Netting Staples Advance

Poultry netting staples are now quoted at $12 in kegs, less 30 and 5%. Bright are quoted at $1.10 less than galvanized. The following extras apply: 50 lb. boxes, 30c per 100 lbs. advance; 25 lb. boxes, 40c per 100 lbs. advance; 10 lb. boxes, 80c per 100 lbs. advance. Fine steel wire is quoted at list plus 20%.

Poultry Netting Due For Sharp Advance

POULTRY NETTING—As yet the manufacturers have not announced the new prices on galvanized poultry netting, but they are expected in the near future. Wholesalers are anticipating a sharp advance in this product as well as in black wire cloth. The manufacturers withdrew their prices a short time ago and it was intimated at the time that new and higher prices could be looked for. In the meantime the wholesalers have been selling from their former list and discount, which is 30 and 10 off list for Canadian manufacturers and 30 per cent. for American netting.

Russian and Italian Hemp Rope Up 5 Cents

CORDAGE AND TWINE—An advance of 5c per pound on all tarred and untarred hemp rope has been put into effect by the manufacturers during the week. On the tarred ratline rope of ⅝ in. diameter and larger the new price is 32c per pound. Tarred hawsers and lanyards are now quoted on a basis of 34c for ⅝ inch and larger. Tarred marline, houseline and hambroline are quoted at 34c, tarred yacht marline at 46c. The untarred rope of ⅝ in. and larger is 36c, while halyards, deep sea line on base is quoted 36c. In the Italian hemp rope the ⅝ in. and larger is now quoted at 36c per pound. The markets for these raw products in Russian and Italian hemp is practically shut off owing to war conditions. The product is used mostly around ships. The cordage market continues steady. There is a fair demand in sorting up orders. In sisal products the market holds firm. One of the large American manufacturers of binder twine recently purchased 100,000 bales of sisal at the prevailing market price which is taken as an indication that cheaper sisal is not looked for by this concern.

Borax Registers An Advance During Week

BORAX—An advance from the dealers to the jobbers of 50c per 100 lbs. for borax has been put into effect during the week. Borax is put up in 236-lb. barrels, but is mostly sold to the retailer in small lots. The price charged by the wholesalers at the present time is 10½c per pound. Other lines of chemicals sometimes handled by jobbers have also advanced during the week. Sal soda used largely in munition plants, has registered an advance of 5c per 100 lbs. to the wholesaler. Soda ash is very scarce and prices have been firm and advancing. Manufacturers find it impossible to keep up with the demand and the output of their plants is completely sold up. Bi-

carbonate of soda has advanced 15c per 100 lbs. during the week. This is used as a baking powder and as such is handled more by grocers. Lampblack has registered an advance from the manufacturers. It is now selling at 26c to 40c in quarter-pound packages, according to the grade.

Escutcheon Pins and Tubular Rivets Advance

RIVETS—An advance of 15 per cent. on the price of brass escutcheon pins, tubular rivets and bifurcated rivets was put into effect during the week. Escutcheon pins are now selling net list price, while the tubular rivets and bifurcated rivets are now selling at the net list price of 65c per carton, containing twelve small boxes of 100 rivets each. There is a firmness in this market and further advances are not improbable, due to the scarcity and high price of tubular steel and of brass.

Galvanized Oil Cans May Go Up in Price

OIL CANS—With the advance in the cost of galvanized iron used in the manufacture of 5-gallon and 10-gallon cans for carrying linseed oil and turpentine, manufacturers have increased their price to the jobber. An extra charge of 75c for the 5-gallon can is now added to the cost of the oil or turpentine and for the 10-gallon size the additional charge is $1. Before the war these cans were sold by jobbers at 50c for the 5-gallon and 75c for the 10-gallon sizes. It is anticipated that higher prices for these cans will not be improbable in the near future.

Malleable Fittings and Bushings Are Up

FITTINGS AND BUSHINGS — Wholesalers have advanced their prices on malleable fittings and bushings during the week. Prices were last week withdrawn by the manufacturers. The increase is a substantial one. The new discount on malleable fittings on the D and C grade is 15 per cent. off, malleable bushings carry a discount of 50 and 5 off list and cast bushings 50 and 5 off.

Washtubs and Pails Advance 10 *Per Cent.*

WOODENWARE—One of the Canadian manufacturers of woodenware has made a general advance of 10 per cent. on their line of woodenware, including washtubs and pails and some lines of washboards. One line of washboards that formerly sold for $4.25 per dozen is now quoted at $4.75. One of their cheaper lines of washboards they have decided to take off the market altogether. In the enamel and zinc washboards there has been no advance. The advance has been caused by the increase in raw materials. In describing the condition to a HARDWARE AND METAL representative, W. H. S. Cane, of Newmarket, Ont., of Wm. Cane, Sons & Co., said: "All articles that enter into the manufacture of our articles have advanced greatly, due to war conditions. Steel wire and paints have all advanced. The wood used in some of our lines has advanced as much as 50 per cent. over pre-war prices. Wire used in the hoops and for bales has gone up 60 to 70 per cent. In the face of these facts we have been forced to revise our prices. The labor problem is a serious one with us. Of our available man-power at the beginning of the war, 55 per cent. have enlisted. Some of these men cannot be replaced. They were expert workmen. It is impossible to get others to fill their places. Our Output has consequently been cut just about in half. We are not looking for new fields in which to get trade at the present. If we are able to look after our customers we consider ourselves fortunate. Business has been good, but of course our force is cut in two and for the available force to meet the needs of trade we have been kept busy."

Saws Up 10 Per Cent.

An advance of 10 per cent. was put into effect by one of the manufacturers of saws and trowels.

Price List on Wire Goods

Bright and Brass — Adopted Nov. 20, 1916

BRIGHT WIRE GOODS.

Iron Screw Eyes.

Suit A. B. & C.

List Nov. 20, 1916.									Price per Gross

Measuring Tapes Advance

An advance was put into effect by one of the large manufacturers of measuring tapes, glass boards and board rules during the week. The advances on their various lines covers a considerable range of percentages.

Black and Galvanized Sheets Higher

GALVANIZED SHEETS—Black and galvanized sheets have advanced considerably in the United States and still higher prices are bound to be asked for stocks held in Canada. On Wednesday of this week the leading sheet interest at Pittsburgh announced a price on black steel sheets of 4c base, Pittsburgh. Prices on galvanized sheets have been withdrawn. A small amount is available in the independent mills at 6c base, Pittsburgh. All quotations locally are much firmer and in some cases advances have taken place. Prices are shown in the current quotations, but are subject to change without notice. Tin plate has also advanced in the United States. Prices are nominal.

Ingot Metals Higher Market Very Strong

Copper Much Higher

COPPER—Copper has advanced locally following the recent advances and strong market in the United States. Reports from New York state that since Nov. 1 producing interests have booked orders for about 5,000,000,000 lbs., or in other words the production at present enormous capacity for 2½ months. The prices named for third and fourth quarters in 1917 are the highest ever touched for such positions. Excitement has been running high in the copper market. Locally the price is 37½c-39c, showing considerable advances over previous quotations.

Tin Reaches Higher Levels

TIN—Tin is much firmer in price, following a firmer market in the United States. Reports state that the British Government has taken over considerable further steam tonnages from India and the East Indies. Freights in consequence have advanced from 25 to 30%. November arrivals of tin have been very small at New York. Locally the price has advanced to 48c-49c.

Spelter Goes Higher

SPELTER—Spelter is strong and higher in both the New York and local market. A recent decline in London, Eng., apparently did not affect the situation in America. The zinc ore market has advanced another $5 ton. Locally, the price is 15c lb.

Lead is Firmer

LEAD—The consumption of lead continues heavy. The market, however, was dormant for a period, but has become more active. The American market is firmer and higher prices are being asked for futures. The price locally remains at 9¼c lb.

Antimony Slightly Firmer

ANTIMONY—The market is showing some signs of further strength, due, it is claimed, to the placing of some further orders for shrapnel in America. The price locally remains unchanged at 18c lb.

ALUMINUM—The market is quiet and prices are unchanged locally, at 68c lb. This metal sold at 18c to 20c lb. for a year prior to the war.

Solder Up 1½c Pound

SOLDER—Prices are higher following the advances in tin and spelter. Prices have advanced 1½c lb. Guaranteed is quoted at 31½c. Strictly pure is quoted at 29c.

Pig-Iron Up $1 Ton

PIG-IRON—Pig-iron has advanced another $1 ton. Hamilton and Victoria Brand is quoted at $32.00 ton. The market in the States is very sensitive and some producers are practically sold out for 1917.

Iron Rivets and Burrs Change Discount

RIVETS AND BURRS.—The discount on black, tinned and coppered iron rivets and burrs was changed during the week from 35 per cent. off list to 32½ per cent. off list. This means an increase in price in these commodities. Copper rivets remain unchanged, although the coppered have registered an advance.

Heavy Demand For Iron and Steel

IRON AND STEEL—Bar iron continues in active demand. The demand for steel is as insistent as ever. Orders for shells already placed will keep the Canadian munition plants busy during the first half of 1917. In the United States large sales of steel have been made to the Allies for delivery during the second half of 1917. One large interest, it is said, has sold plates for delivery extending to the middle of 1918. A Canadian car works recently placed orders for 15,000 tons of plates and shapes with a Pennsylvania concern. The election in the United States had little or no effect on the iron steel trade. Buying continues active and one of the largest independent steel companies of the United States has announced that its books are filled to overflowing with orders for steel and steel products. No orders will be accepted until further notice.

Iron and Steel Make Advances During Week

IRON AND STEEL.—Considerable advances were recorded in iron and steel during the week, with still further advances expected. In band steel there is an advance of 25c per 100 pounds, making the selling price now $4. Mild steel is quoted 15c up at $3.65 per 100 pounds. Angles are advanced 10c per 100 pounds base, and are now selling at $3.85 to $3.95. Channels are quoted from $4 to $4.50 base. In the large sizes of flat iron bars there has also been an advance, the price now quoted on sizes over 3½ inches wide and 1 inch thick is now at a base of $4 for iron and $4.15 for steel in certain instances and at a base of $5 in other instances. Tees and channels are both quoted at $4 to $4.50 base. Horseshoe steel and toe calk steel are practically off the market, as dealers have been unable to get supplies. Further advances in all lines of iron and steel are anticipated in the near future. Angles is one of the lines that is expected to go up almost momentarily.

New Discounts on Wrought Butts Named

WROUGHT BUTTS.—Advances were recorded in the price of wrought butts in the neighborhood of from 10 to 15 per cent. The new discounts on heavy and light tee and strap hinges were also named during the week. In the instance of the latter the discount has been changed from 40 per cent. off to 30 and 5 per cent. off, for both heavy and light. On wrought butts the new discounts are as follows:—

No. 840	25%
No. 800	20 & 5%
No. 838	25%
No. 808	25%
No. 804	30 & 5%
Nos. 802, 842, 844	30%
Nos. 810 and 814	15.5%
Nos. 820 and 910	30%

LONDON MARKETS

LONDON, Ont., Nov. 23—A large number of important price changes have again taken place, and the end is not yet in sight. The retailers are preparing for the Christmas trade and a large volume of holiday business is expected. Trade at present is brisk in both wholesale and retail lines. Collections are good. There is a decided scarcity of many hardware lines.

Sash Weights, Nails and Wire Goods Higher

Sash Weights Go Higher

Sash weights have advanced in price and solid are now quoted at $2 per 100

lbs. Sectional weights are quoted at $2.50 per 100 lbs.

New List of Wire Goods

A new list has been issued on brass and bright wire goods. The new list with discounts is shown elsewhere in a panel.

Wire Nails Up 10c

Wire nails have advanced 10c per keg and are now quoted locally at $4.20 base.

Cut Nails 30c Higher

An advance of 30c per 100 lbs. has taken place in the price of cut nails and the price is now $4.00 base.

Iron Pipe Goes To Higher Level

The second advance inside of two weeks has gone into effect on lap and buttweld iron pipe. The new and higher prices are shown in a panel elsewhere in this issue.

Stove Pipes Higher

Stove pipes have advanced further and are now quoted per 100 lengths as follows: 3 in. common, $9.81; 4 in., $11.47; 5 in., $11.47; 6 in., $11.47; 7 in., $12.69.

3 in. bright, $11.47; 4 in., $13.91; 5 in., $14.33; 6 in., $14.33; 7 in., $15.14.

Stove pipe elbows are quoted as follows: light pattern 6 in., $1.45 doz.; 7 in., $1.60 doz. Heavy pattern are quoted 5 in., $1.81 doz.; 6 in., $1.81 doz.; 7 in., $2.02 doz.

Malleable Fittings Advance

New discounts are out on malleable fittings as follows: Class B and C, 15%; Bushings 50%; Unions 50%; Plugs 50%.

Extension Ladders Up

A new and higher price has been issued on extension ladders. The advance is 1c per foot and quotations are now: 32 ft. and under, 17c ft.; 34 to 44 ft., 19c foot; 46 ft. and over, 26c foot.

Tee and Strap Hinges Are Higher

New and higher prices have been issued on tee and strap hinges. The new net prices are as follows:

	Heavy Tee Doz. Prs.	Heavy Strap Doz. Prs.
4 in.	$1.70	$2.00
5 in.	2.13	2.47
6 in.	2.40	2.66
8 in.	2.74	3.60
10 in.	4.86	6.39
12 in.	7.72	7.92
14 in.	7.85	9.05

The foregoing are net prices. When figuring from list prices the following discounts apply: Light tee and strap hinges, 30-5%; heavy tee and strap, 30-5%.

Steel Butts Up About 10%

Steel butts have advanced about 10%. The new discounts are as follows:

No. 800, 20/5%; 840, 25%; 838, 25%; 804, 30/5%; 842, 30%; 810, 15/5%; 814, 15/5%.

Bolts Advance 10-15%

Bolts and nuts have advanced as indicated in last week's issue of HARDWARE AND METAL. The new discounts are shown in the current market quotations. They were also shown in a large panel in last week's issue.

Linseed Oil Firm

Linseed oil remains firm at last week's prices. The demand is fair. Quotations are firm at the following figures:

	Raw	Boiled
1 to 2 barrels ....Per gal.	$1.20	$1.23
3 to 5 barrels ....Per gal.	1.19	1.22
6 to 9 barrels ....Per gal.	1.18	1.21

Turpentine is firm and unchanged and is quoted in single barrel lots at 74c per Imperial gallon in single barrels; 2 to 4 barrels are quoted at 73c per Imp. gal.; 5 gal. lots 81c per Imp. gal.

White lead in oil remains firm at $13.95 per 100 lbs. in ton lots and $14.25 per 100 lbs. in less than ton lots.

Putty in Fair Demand

Putty is in fair demand and is firm and unchanged. Quotations are as follows:—Standard 100 lb. drums $3; 25 lb. drums $3.10 per 100 lb.; pure 100 lb. drums $3.70 per 100 lbs.; 25 lbs., $3.80 per 100 lbs.

Glass is Firm

Sheet glass is firm and is in good demand. Single diamond is quoted at 20 per cent. off; double diamond at 20 per cent. off; cut lights at 50-5 per cent. off.

Bit Braces Up

Several makes of bit braces have been advanced by the manufacturers and jobbers 10%.

WINNIPEG MARKETS

WINNIPEG, Nov. 23.—Reports as to general business conditions are very favorable, indeed, and in spite of the adverse reports which were being given out two months ago, the volume of business being handled is remarkably good. The high prices now ruling on all commodities do not seem to be influencing business to any marked degree, and retailers are booking their goods for spring with every confidence in the outlook. This is an extremely encouraging report to have, and speaks well for the present business stability of the West.

Jobbers are making every effort to assure their customers that goods will be on hand for them, but some disappointments are bound to crop up. Manufacturers are becoming loaded up with orders to an unusual degree, and deliveries are getting extremely slow. Some goods which are being ordered now will not be shipped for twelve or fifteen months. That means that some lines will not be in stock during all of 1917. The outlook in this respect does not look any too bright, but it's a case of making the best of existing conditions.

Many Prices Have Moved Upwards

During the past week prices have been on the upward trend again, and a great many lines come in for consideration. Among the many lines to be revised are axes, cotton rope and sash cord, which advance over last week's prices; barb wire and wrought iron pipe.

Practically all lines in which are to be found any steel or wire are being advanced in price. This is notable in revisions which have taken place recently in practically all lines of wrenches, tinners' tools, Maydole hammers, etc.

Another advance in tinware is also noted, the new prices ranging about 7½ per cent. higher than formerly. The high levels reached in these goods is perhaps most noticeable in the quotations given below on oil cans and water pails—two lines familiar to the trade. The quotations follow:—Flaring water pails, I.C., 6-qt., $1.87 per doz.; 10-qt., $2.48 per doz.; 14-qt., $2.86 per doz. Flaring top coal oil cans, ½-gal., $3.08 per doz.; 1-gal., $3.74 per doz.; 5-gal., $9.29 per doz.

The latest prices issued on barb wire, while only 10c per spool higher than former quotations, mark a new high water level for this commodity. Changes are also to be noted in coil spring wire and plain galvanized wire. The new prices are as follows:—

	Ft. William. Per spool.	Winnipeg. Per spool.
Bark wire, Lyman ..	$3.70	$4.00
Glidden	3.55	3.85
Baker ..	3.50	3.80
	Per 100 lbs.	Per 100 lbs.
Coil spring, No. 9..	$4.30	$4.60
Plain galv., No. 9..	4.35	4.75
„ „ No. 12..	4.60	5.00

Axes, Stove Pipe and Elbows Higher

For some time now a revision in the price applying to axes has been discussed, and the new quotations below illustrate how great this advance has been:—Hudson Bay axes, unhandled, 2 lb., $8 per doz.; 2½ lb., $9 per doz.; 3 to 4 lb., $10 per doz.; handled, 3 to 4 lb., $12.50 per doz. Black Prince. unhandled, $9.50 per doz.; handled, $12 per doz.

Following the recent advances noted in Canada plate, and as predicted in HARDWARE AND METAL, new prices have now been issued on stove pipe and elbows. Jobbers advise that the present outlook for next year on Canada plate is no brighter, and it may be utterly impossible to secure any. This being the case, it would seem advisable for dealers to protect their stocks carefully, and warn their customers of a possible shortage. The present quotations being made on stove pipe elbows and patent standard pipe are:—Elbows—Heavy 6 in., $2.08 per doz.; 7 in., $2.33 per doz.; 8 in., $3.46 per doz. Light—6 in., $1.60 per doz.; 7 in., $1.75 per doz. Light standard pipe—6 in., $14 per 100 lbs.; 7 in., $15 per 100 lbs.

The new prices issued on wrought iron pipe are not greatly changed from former quotations, but the tendency is ever upward—the latest advance being about 2½ per cent. Quotations follow herewith:

Black.	
Wrought Iron Pipe—	Per 100 feet.
¼	$ 3 92
⅜	4 00
½	5 18
¾	6 30
1	9 32
1¼	12 60
1½	15 08
2	20 30
Galvanized.	
⅜	6 48
½	6 94
¾	8 73
1	12 92
1¼	17 46
1½	20 88
2	28 08

Iron, Copper Rivets and Burrs Up

Another new price issued this week, which will prove of interest, is that applying to all lines of iron rivets. The new discount is 25 per cent., whereas formerly 30 per cent. was given. The lines affected are carriage rivets, wagon box rivets, section rivets, hame rivets and tinned rivets. It is also to be noted that new quotations are in order on coppered iron rivets and burrs and tinned iron rivets and burrs. To-day's figures are:

Coppered Iron Rivets and Burrs.	
Assorted—	Lb.
No. 8	0 32
No. 10	0 35
Rivets Only—	
No. 8	0 22
No. 10	0 22
Burrs Only—	
No. 8	0 35
No. 10	0 37
Tinned Iron Rivets—	
No. 8	0 22
No. 10	0 23
Tinned Iron Burrs—	
No. 8	0 37
No. 10	0 39

Cotton Goods Go Still Higher

Following last week's jump in cotton rope and sash cord, the new prices shown below are somewhat of a surprise, though it was expected further increases would go into effect at a later date. This is only another instance, however, of the uncertainty of the markets, and it should pay every retailer well to make a careful study of same. To-day's price on cotton rope is 6c per lb. higher than two weeks ago—most certainly a big increase. Revised quotations are as follows:—Cotton rope, 3-16 in., 41c lb.; ¼ in. and over, 40c lb. Sash cords, in hanks or coils—6 in., 49 lb.; 7 in., 48c lb.; 8, 9 and 10 in., 47c lb. Wrapping twine—Cotton, 3-ply balls or cones, 45c lb.; 4-ply balls or cones, 48c lb.

Leather Belting Shows Big Advance

New discounts have been issued on leather belting, which show a tremendous increase over previously ruling figures. The war has brought about an enormous demand for leather—a demand which is taxing the sources of supply to their utmost. Whether leather belting will be one of the lines to be listed "short" during next year is not yet certain. Quotations are:—

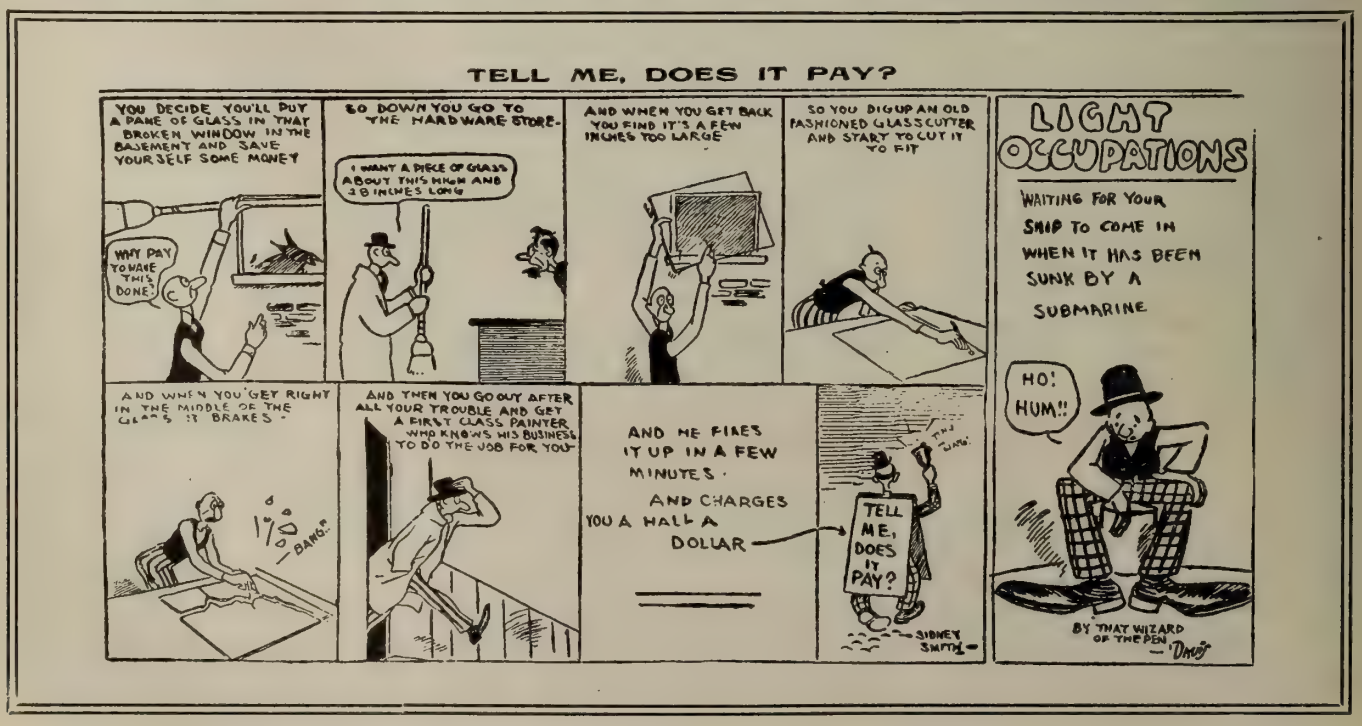
Agricultural or No. 1, 40-12½ and 2½ per cent.

Standard, 30-10 and 10 per cent.

Extra, 30 and 10 per cent.

Cheap Cutlery, Clocks and Hammers Up

Other lines to be noted on the upward trend are as follows:



Tea spoons, No. 900, gross	$2 80
Dessert spoons, No. 900, gross	5 50
Table spoons, No. 900, gross	5 75
Dessert Forks, No. 900, gross	6 00
Medium Forks, No. 900, gross	6 25
Medium Knives, No. 900, doz.	1 65
Alarm Clocks—	
Sleepmeters, each	1 40
Lookout, each	1 35
Maydole Hammers—	
No. 1, doz.	11 00
No. 1½, doz.	10 00
No. 11, doz.	11 00
No. 11½, doz.	10 00
No. 12	9 40

Bluestone Higher for Spring

A further revision has taken place in the price of bluestone, and quotations being made for spring shipment are now at 14c lb. This is an advance of 1½c per lb. over prices issued a couple of weeks ago, but jobbers advise this will likely be permanent until the first of the year at any rate.

Oil and Turpentine Unchanged

For the week no further change is noticeable in the price of linseed oil and turpentine, but there is no line on which the market seems more uncertain. It would certainly seem as though the prices listed below were at a high enough level, but further advances would not be surprising. To-day's figures are:—(Per gal. bbbl. lots)—Linseed oil—Raw, $1.39; boiled, $1.42. Turpentine, 80c.

EVENTS IN THE TRADE

Montreal, Que.—Albert Turgeon & Co., hardware merchants, have dissolved partnership.

Firms Registered

The following firms have registered in Quebec Province: Montreal, A. S. Bissonnette; J. W. Charbonneau, hardware; U. Granger, hardware; Sarrasin & Mercelle, hardware; Lymburner Brass Works, Inc., has been incorporated.

Killed in Action

Capt. George Vallance Taylor, third son of Sir Thomas and Lady Taylor, formerly of Winnipeg, has been killed in action. When living in Winnipeg he was well known as an athlete, and for some years was employed in J. H. Ashdown's store.

Banner Lamps and Lanterns

An attractive and well illustrated 42-page catalogue has been issued by the Ontario Lantern & Lamp Co., Hamilton, Ont., featuring oil lanterns, lamps and burners. The catalogue is gotten up in loose leaf form and additions can be made from time to time. Copies will be mailed on request.

Personal

J. E. Beauchamp, of J. E. Beauchamp & Co., Montreal, was a business visitor in Toronto this week.

Capt. Thos. Magladery, M.P.P. for Temiskaming, and who for some years was engaged in the hardware business at Parkhill and New Liskeard, Ont., had his leg badly crushed while on active service in France and is now in a hospital in Oxford County, England.

Lieut. Carmichael Missing

C. Hoshal, Weyburn, Sask., is in receipt of a letter from Lieut. G. W. Brown, now at the front, stating that little hope is entertained that Lieut. K. Carmichael will be seen again. The writer says that the last time he saw the missing officer was when he was mounting the parapet with his men for an advance.

Obituary

Moosomin, Sask.—The death occurred here of A. S. Smith, of the A. S. Smith Hardware Co.

M. S. Buchanan, who served six terms as mayor of the town of Ingersoll, died on November 14 after a prolonged illness. Mr. Buchanan was the inventor of the Buchanan hay fork, which, together with haying tools, he has been manufacturing in Ingersoll for over thirty years.

Winnipeg Notes

J. H. Ashdown left last week for a visit to his branches at Saskatchewan and Calgary.

W. L. Pattinson is representing the J. H. Ashdown Hardware Co., in Western Saskatchewan and Eastern Alberta in place of A. F. McDermid.

D. B. Thompson, traveller for the J. H. Ashdown Hardware Co., Winnipeg, will join the noble army of benedicts shortly. Mr. Thompson covers the Edmonton territory for this firm.

The following are some employees of J. H. Ashdown Hardware Co., who have figured in the fighting in France recently: Norman Bell, of the warehouse was recently killed; Jack Hourihan, of the pricing dept. was wounded in the hands and face by shrapnel; Frank Scruton writes to say that he is well, but has been seeing some severe fighting; William Thompson, one of the ledger keepers, has been wounded, and is now in a hospital at Norwich.

Industrial Notes

Guelph, Ont.—The Guelph Stove Co. will build a new foundry.

Hamilton, Ont.—The Dominion Steel Castings Co. will build an extension to their plant.

Copper Cliff, Ont.—The Canadian Copper Co. contemplate extending their plant here.

St. Catharines, Ont.—The Metal Drawing Co. will build an addition to their machine shop.

Toronto, Ont.—The Canadian Carbon Co. will erect a three-storey factory on Paton Road, to cost $23,400.

Montreal, Que.—The Dominion Cutlery Co., 591 St. Catherine Street west, are considering the erection of a factory.

Guelph, Ont.—Work will be commenced at an early date on the erection of an addition to the Loudon Machinery Co. plant, to cost $6,000.

COCHRANE HARDWARE CO. TO DO CASH BUSINESS

North Bay, Ont.—The Cochrane Hardware Co. has made a public announcement that commencing Jan. 1, the retail business of the firm will be conducted on a cash basis. The announcement reads as follows:—

"Owing to the extreme advance in prices, we have decided that in order to have our customers and friends able to obtain their hardware at the least possible price, we must place our retail business on a cash basis.

"On January 1, our retail store will be a cash store. It will not be necessary for us to take care of bad accounts, or spend money collecting small ones.

"Our retail business has been steadily growing into a cash business. The cash system is the only fair way to do business. Pay only for your own goods. Buy only what you need. War time is the time to make your dollar count. You can be sure that you receive value for every dollar spent with us. We would appreciate your co-operation by not asking for credit after January 1."

HARDWARES KEPT OPEN ON SUNDAY

Gas Turned Off at Calgary

The Calgary hardware stores did an enormous business on Saturday, November 11, on account of the break in the gas main 200 miles south of Calgary. The majority of houses are heated by gas in Calgary, and most people have gas stoves to cook with, consequently when the gas suddenly ceased to flow, there was a rush to the hardware stores to buy small coal stoves and oil stoves. So great was the demand that in some instances stoves that in the ordinary way sold for $4.50 were sold on Saturday night for $10.00, and coal oil, regularly 37c a gallon, brought as high as 90c a gallon. Coal also shot up in price to $20.00 a ton and only a limited amount was allowed each purchaser. All hardware stores and coal dealers were allowed to keep open on Sunday in order to accommodate the public, but many people had to leave their homes and stay at hotels. Every hotel in the city was full and in several hotels people spent the night in the lobby because they were too late to obtain rooms. Gas was turned on early Tuesday morning and everything is normal again.

Travelers Want Better Accommodation

Important Matter Discussed at Banquet of Sales Managers' Association—Presented a Petition to Government Suggesting Remedies.

A BANQUET was held by the Sales Managers' Association at the Fort Garry Hotel, Winnipeg, on Wednesday evening, Nov. 15. This organization is only a year old, and has grown to such an extent, arrangements are already being made to form branches both East and West. Following the banquet, some facts and figures were submitted by C. H. S. Bamford, president, showing what had been done by the organization since its inception.

He referred to the train service which had been improved between Watrous and Melville, to the improvement in postal facilities at Shaunavon and other points, improvement in the handling of baggage on the railways, the establishment of a clearing house for travellers, and many other beneficial changes which had been effected by the Association.

The most important effort made by this body was in connection with hotel accommodation in Manitoba. To secure an improvement in this, the Sales Managers' Association, the Commercial Travellers' Association, and other bodies, presented a petition to the Manitoba Government on Nov. 14.

The petition to the Government draws attention in its preamble to the fact that in eighty-two points in Manitoba, outside the city of Winnipeg, there had previously been liquor licenses, which franchise operated in many cases as a part remuneration for the accommodation provided for the travelling public. The removal of this source of income had affected the hotel situation at these points, so that, at the present time, the whole matter of hotel accommodation required thorough consideration.

The Sales Managers' Association and other bodies collected data on the condition of hotels in Manitoba since prohibition, and a conference was later held, which was attended by delegates from a large number of public bodies. The following resolutions were passed to be submitted to the Manitoba Government:

Resolved that, in the opinion of this conference, the hotel is performing a function essential to the well being of the community, and the public at large, and hence, its support is a public obligation.

Resolved that, whereas public services rendered by the hotel have been in many cases in the past compensated in part by the license to sell liquors, and whereas the people of this province has refused to continue this method, it would seem necessary that the public recognize that this obligation must be met in some other way.

Resolved that a Commission under the Department of the Attorney General should be appointed by Provincial Government to take supervision of all hotels, restaurants, boarding houses, auto and other liveries, billiard and pool rooms, within the province, with powers of licensing and inspection, and the enforcement of such provincial regulations and standards as may be established from time to time.

Resolved that the Government should take steps to establish a scale of standards to which hotels, restaurants and boarding houses must confirm, such standards to be graduated according to the population of the community affected.

Resolved that powers should be given to the municipality or municipalities to form a hotel district for the purpose of providing adequate accommodation, and that these municipalities may offer exemption or make grants to hotels in return for public services, such as reading or writing rooms, rest rooms, lavatories, or other public accommodation.

Resolved that this conference recommended that the keeper of a standard hotel shall be entitled to sell all non-intoxicating drinks and beverages, cigars and tobaccos, and to conduct an ice cream or general restaurant, cafe or billard or pool room, without business tax or further license.

Resolved that in the opinion of this conference, the so-called jitney bar business has reached such proportion as to justify government supervision and control, and that this be placed under the proposed commission.

Resolved that the Provincial license fee charged other business be sufficiently large to enable the standard hotel to compete with other vendors who do not furnish general accommodation.

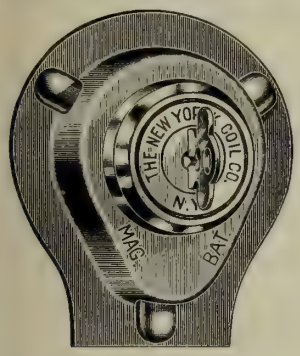
An address was delivered during the evening by G. N. Jackson, of the Winnipeg Board of Trade, who recently returned from England, where he appeared before the Imperial Conference of the Chambers of Commerce.

CASH DISCOUNTS—ITS USES AND ABUSES

(Continued from page 37.)

gains with the sellers of merchandise, one of the greatest evils that has occurred under the cash discount system is the hard and unusual terms demanded by such buyers who have not recognized that in the effort to make unusual terms they are doing the cash discount system a great harm and, in fact, are creating sentiments for its abolishment.

What should be the attitude of the buyer and seller of merchandise toward the cash discount system? The answer is simple: The exact observance of cash discount terms and compliance with the usual terms of the selling house. If the buyer will sit down and figure what the difference is on a two per cent. allowance between payment in ten days and twenty days he would realize how unjust it is to demand the premium when it is unearned, what a loss is occasioned the selling house and how unreasonable it is to believe that such allowance could be made without some form of recovery or secret recoupment; also if the driver of a hard bargain would calculate what the difference is between "two per cent. —ten days and two per cent.—twenty days" with sixty days dating, he must realize that he is forcing discrimination upon the seller of the merchandise and some form of recoupment if the seller is giving him his best prices, and yet may feel it necessary to meet the demands of the buyer.



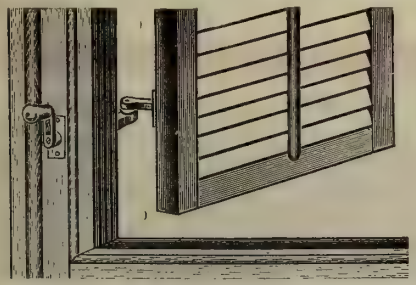
The seller of merchandise must insist upon his customers remitting within the agreed time if the premium is to be taken or allowed. The buyer of merchandise must not expect to receive the premium unless he earns it by remitting within the specified time. The reciprocal relation is thus preserved; honesty and fairness are defended, and the cash discount system will be permitted to serve its use undisturbed—that is, as a premium for prompt payment and an encouragement to buyers so to finance their business that this premium may be earned.

NEW HARDWARE GOODS
OFFERED TO CANADIAN HARDWAREMEN

IGNITION LOCK FOR FORD CARS

The New York Coil Company, 338 Pearl St., N.Y. City, have added to their line a new Ignition Switch Lock for Ford cars.

The makers state that the lock is so constructed that installation is very



Ignition Lock for Ford Cars.

readily effected by the simple removal of the three screws which hold the name plate on the regular Ford switch, and substituting the ignition lock.

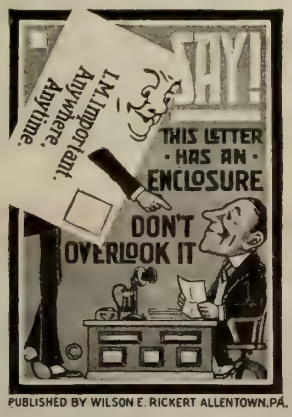
Three sliding members, which are forced outwards by a three-lobed cam inside the switch, conceal and protect the holding screws. These remain over the screws after the first operation of the Switch, and do not slide each time the key is turned. The key can only be removed when the switch is in the "off" position, when the cam effectually prevents the lugs being forced inwards and consequently renders the device thief-proof. The makers state the lock can be installed by any owner in less than five minutes.

MALLORY · SHUTTER WORKER

Mallory Mfg. Co., Flemington, N.J. is marketing the Mallory shutter worker, which the makers claim is a perfect self-locking adjustable shutter

Mallory Shutter Worker.

worker that opens and closes the shutters without raising the sash. By turning a pair of handles inside the room the shutters can be adjusted to any desired angle. The workers can be attached to old or new houses whether frame, brick or stone, and the makers state, can be installed without the necessity of tearing out the walls or hiring an expert mechanic. The working parts are encased, and in this way are protected from moisture and dust. The working parts are made of malleable iron and are accurately machine cut, this making them run smooth and true. In case of accidental breakage all parts can be easily replaced. A catalog with other descriptive matter will be supplied on request.

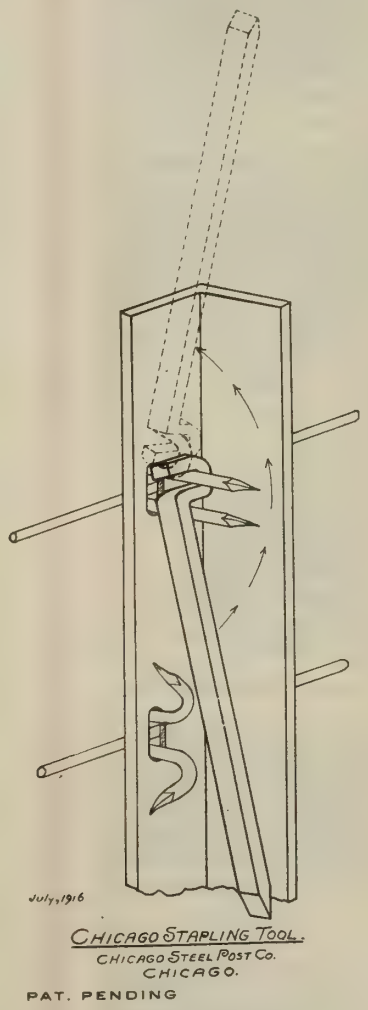


BOOSTER STAMPS

Wilson E. Rickert, Allentown, Pa., has issued a number of special business stamps, which if used, it is claimed will

No. 70. "Rush It" Stamp.

make correspondence more efficient. The designer claims they will facilitate replies, minimize errors and in a general way get things started in the right



No. 71. "Do not Overlook It" Stamp.

way. Two of the designs are illustrated. A catalog of designs will be supplied free upon request.

CHICAGO STAPLING TOOL

Chicago Steel Post Co., Chicago, Ill., offers to the Canadian trade the Chicago stapling tool here illustrated. The makers state that this is a new device, which has simplified, to a great extent the fastening of fence wire to steel posts. The tool it is claimed will

The Chicago Stapling Tool.

satisfactorily clinch an ordinary staple on a steel post as shown in the illustration. The directions advise the user to place the staple over wire and insert in hole that registers with the wire. Then place the tool on the staple as shown in the illustration, and bend upward as far as possible, as shown on dotted line in illustration. Then place tool over lower leg of the staple and bend downward. The two legs of the staple are bent inward against the inner face of the angle. The tool is a one-man device, and is claimed by the makers to be easy to operate, quick and efficient.

A Few of Our Carload Buyers

M. AUGUSTIN, NEW ORLEANS, LA.

HEYSTEK & CANFIELD CO. GRAND RAPIDS MICH.

STANDARD GLASS & PAINT CO. DES MOINES IOWA

SPURLOCK-NEAL CO. NASHVILLE, TENN.

RANDOLPH PAINT CO HOUSTON, TEX.

INTERIOR SUNSET PAINT CO LOS ANGELES, CAL.

J. H. ASHDOWN CO. WINNEPEG, CAN.

EVERY concern mentioned in this Announcement buys Kyanize by the carload. (*There are others.*)

In this way only are they able to keep pace with the retail demand that centres on their stores.

That's the big feature about Kyanize—*it's saleability.*

Kyanize varnishes and enamel are practically sold when you stock them.

Our National Advertising has created a wide market for Kyanize.

It is the experience of most Dealers that the people start buying Kyanize almost as soon as they put it in their stores.

If there is no Kyanize Agent in your locality, we invite you to write for a copy of the big, new 1916-17 Edition of "The Dealer's Mint of Selling Hints" and full particulars about the Kyanize Exclusive Agency Plan.

NO question about it, business will find you out as soon as the people find out you carry Kyanize.

People like to buy a guaranteed article. And when they find the goods up to the guarantee they come back for more.

There's another big point. *They have to come back.* It is imperative.

The Kyanize Exclusive Agency Plan allows only one Dealer to a territory.

All the sales are his—all the profits are his.

Backed by a combination like this: First, a nationally advertised, guaranteed, quality article.

Second, a definite sales plan that absolutely protects.

Third, a constant succession of trade helps and selling plans, is it any wonder that so many Kyanize Agents are Carload Buyers—*and that all succeed.*

If there is no Kyanize Agent in your locality, we invite you to write for a copy of the big, new 1916-17 Edition of "The Dealer's Mint of Selling Hints" and full particulars about the Kyanize Exclusive Agency Plan.

WHAT OTHER PAPERS SAY

BONUS FOR PUNCTUAL CLERKS

From *American Metal Market.*

The salaries of between 3,000 and 4,000 men and other salaried employees of the Westinghouse Electric & Manufacturing Company, Pittsburgh, Pa., were advanced about 12 per cent. Nov. 16 through the extension of the bonus system from the shops where it has been in force for a long time. By the terms of the extension every employee will receive a bonus amounting to 8 per cent. of his salary each month, providing total excusable time absent and late during that period does not exceed six hours incurred on not more than three occasions. An additional four per cent. will be given every month to employees who have not lost any time through absence or tardiness.

The system is made effective from November 1st, bringing a total of approximately 18,000 employees, official, clerical, and mechanical, under the plan. It was stated that other corporations were watching the innovation with a view to extending it to their plants, for while there have been many wage increases to men employed by the day, there have been very few for men who are paid by the month.

PAID TO ATTEND NIGHT CLASSES

From *Maritime Merchant.*

An interesting step has been taken by the Nova Scotia Steel & Coal Co., at New Glasgow. Younger employees of the Steel Works are now required by the company to attend the evening classes, and are paid for the time they put in at the classes, while they are "docked" for the time they lose therefrom. Failure to attend the classes may result in discharge from the employ. It is possible the same system may be adopted at Sydney in connection with the Dominion Steel Works. This is a very important step in the direction of making use of our splendid system of technical education and will be certain to result in increased efficiency among the rising generation of workers in New Glasgow.

TANKS BETTER THAN FIRE LOSSES

From *American Artisan.*

A few weeks ago the village of Phoenix, New York, was almost wiped out of existence by a fire that raged for a night and the better part of the following day. Nearly a million dollars' worth of property was burned up, hundreds of persons were left, at least temporarily, without employment, and every mercantile enterprise was destroyed so far as buildings and stocks were concerned, in spite of the fact that nearly all the streets were piped with water and hydrants were placed frequently and adequately.

The reason was, the village board had not seen fit to provide any real fire fighting apparatus, supposedly because of the disinclination to raise sufficient taxes for this purpose.

The fallacy of the policy of not wanting to increase the tax burden on personal and real estate property was shown very plainly before the conflagration, because the fire insurance companies recognized the dangerous condition and every business man and property owner was heavily penalized by exceptionally heavy fire insurance rates. In addition they now have to take a tremendous loss, so that although they have actually paid out enough money in extra premiums on their policies to pay for sufficient and efficient fire fighting apparatus, and in the bargain will lose probably twenty times the amount they have neither apparatus nor the property.

Retail hardware dealers and other business men, located in small towns or large cities owe it to themselves and to those whom they owe for their supplies to make a decided stand for sufficient and efficient fire fighting apparatus in their city or town.

BIG AND LITTLE BUSINESS

From *Financial Post.*

There is always a tendency on the part of the individual to complain of the treatment accorded by large corporations and business institutions. There are of course times when there is justification for complaint but in the majority of cases it will be found that the trouble lies with the individual himself. Recently there have been complaints from Western Canada by farmers against the banks and mortgage companies. The Grain Growers' Guide, which is the great organ of the farming community of the prairie country, has been making some investigations and has found that the trouble in most cases is with the farmer rather than with the financial institutions. In fact the Guide has been telling the agricultural borrower some plain truths about himself and his business obligations.

The Guide found that in cases where the farmers were to blame it was very frequently noted that they had been careless in attending to their business correspondence. In other cases farmers with notes falling due at the bank neglected to renew them and paid no little attention to notices received. The farmer, or for that matter the business man, will find that neglect in matters of this kind is one of the surest ways to impair his credit standing. A note should either be paid or renewed promptly. Principal or interest payments on a mortgage should be attended to on the due date. When payments cannot be made the company concerned should be notied well in advance.

There is room in business dealings of this kind for the broad application of the golden rule. The individual who treats the big institution as he would like to be treated by that institution will seldom have cause for complaint.

BUSINESS PREPAREDNESS

From *Domestic Engineering.*

There is a great and constant demand for national preparedness; its advocates picture vividly the ruinous fate that might befall the nation, should one of the first-class powers invade our shores.

But there is another kind of preparedness which must be considered of much importance, as it concerns the material or financial welfare of the individual. We refer to business preparedness.

Here is a kind of preparedness which is sadly neglected by many business men, a considerable number of whom are to be found in the plumbing and heating crafts.

The nation is prosperous, the richest upon the face of the globe, but individually the citizens thereof are relatively poor, as is shown by statistics.

In a survey recently made of the plumbing shops in a large western city, it was shown that a real majority of these shops went out of business after fifteen years' activity. Only a small percentage yielded an annual profit greater than the wages of the average employed journeyman.

On the battlefields of modern business, preparedness is the ammunition of progress and success. It consists of "know-how" methods, knowing how to match your methods against the other fellow's and survive in the competitive struggle.

The commercial columns of the daily newspapers testify daily to the defeat and destruction of the unprepared on the firing lines of competition. For further details—visit the bankruptcy courts.

Men in the trade will agree that cost-finding systems and modern business methods are much needed, that they are the best kind of business preparedness, and that many master plumbers and fitters can be materially assisted by adopting them.

"The average master plumber or master fitter is often heard to complain that he is not making money," said a busy man in the trade, who has developed a profitable business. "Perhaps he may or may not realize that there is a reason for the unsuccessful operation of business. Every cause has an effect, and in business practice this is particularly true.

"There are, no doubt, instances where plumbing and heating shops are able to thrive in spite of inefficient management, but such instances are rare and can be accounted for by an overflow of good contracts, and that a shop is so favored with profitable work that it is entitled to be called 'lucky.'

"Sooner or later, however, shops of this kind will strike an unexpected rock which will do them serious damage, and then they will realize that their unpreparedness in business procedure will prove an annoying obstacle in weathering the setbacks received."

The trade papers and leading men in the trade have for years advocated the principles of scientific management for master plumbers and master steamfitters—in other words, business preparedness.

Successful business men, like successful generals, know the vital power of preparedness. They have improved and strengthened their methods of operation, and have remained ever ready to absorb all information which will tend to promote the growth and stability of their places of business. Preparedness in business is not a recommendation—more often it is an urgent need.

WRITE TO THEM

From *New England Grocer and Tradesman.*

One of the best things you can do is to answer the advertisement of any business house that has a proposition that appeals to you in any particular.

We read of a lawyer of Boston who became wealthy simply because he was a close reader of advertisements, in newspapers and magazines. When he found one that seemed to hold any interest for him he answered it, and in that way he became acquainted with opportunities that other men overlooked.

If it were not for advertising you would not have a trade paper at all, for it costs more than you pay to make and mail to you fifty-two magazines. The additional expense is covered by advertising, and the more the advertising the better the magazine. The amount of advertising depends on the response the advertisers get, and when manufacturers and wholesalers find that you are responsive they will offer more and better buying opportunities, making it all the more worth your time to read the advertisements.

PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

THE question of roof drainage is one which requires some little study, and those interested in sheet metal work will no doubt from time to time be called upon to do such work. We showed in a previous issue how a hopper for a flat roof could be made, but it was more for a roof that drained to the centre.

Fig. 1 in this article shows a type of hopper which is used for draining rain water from a roof that is sloped to one side, and through separate rain water leaders of cast iron soil pipe. The top is nearly level with the roof and a wire screen or basket is made in hood form over the top so as to prevent leaves or any other material from getting into the pipe.

Fig. 2 shows the front view with back flange. A perspective view is also shown which gives the reader a better idea of what the hopper looks like.

Having determined the size required, draw a side and front view. Then divide the curved portion into equal parts as shown, as well as the straight side piece, 1, 2, 3, 4, 5, and 6. Then draw a stretchout line to which the measurements, 1, 2, 3, 4, 5, and 6, must be transferred. Now draw a number of vertical dotted lines from 2, 3, 4, 5, and 6 downward, and intersect these lines by drawing horizontal lines through same. A solid line drawn through these points of intersection completes the desired patterns.

It will be noted that if the side view and front view are drawn in line with each other, the vertical and horizontal dotted lines need only to be extended sufficiently long to draw the patterns for all the pieces, two for the sides, and one for the front, while the front view, Fig. 2, is the pattern for back.

Sometimes the sides and front pieces are made all the same length as the back piece, thus allowing a flange piece to fit underneath the roofing material. So that by cutting the front as shown at 1, 2, 3, 4, 5, 6, and 7, sufficient material would be allowed for a flange. That is of course when such a hopper is used for the inside of the parapet wall.

Fig. 4 shows the same design of a hopper used on the outside of the parapet wall, the water being conveyed through the wall with a chute. This is simply a rectangular pipe with a short spout, the same shape and size as the chute..

When water is conveyed through a conductor pipe, as shown in Fig 4, it would be better to use a corrugated pipe.

Many persons are not aware of the reason why corrugated pipe is used, but it is very important that such pipe be

(Continued on page 58.)

WEEKLY PAINT DEPARTMENT

The Window That Creates Profits

How the Law of Suggestion Made Sales—How to Apply it—Make it Suggest Something.

A SPEAKER at a meeting of retail merchants asked the question, "What is salesmanship?" He then proceeded to answer the question as follows:—One of the most potent elements in making permanent customers is the law of suggestion. It seems to be the universal habit of order takers to use the negative suggestion instead of the positive suggestion. There are millions of people in stores telling you every day that you don't want this or that.

"The negative question kicks the football of the mind towards the goal of 'No,' the positive question to the goal of 'Yes.'"

To illustrate this the speaker told of a purchase he was making some time ago of a razor. After making the purchase the clerk said to him, "You don't want a shaving brush, do you?" And he said, "No." That was the natural answer. A few days later he found out that he ought to have a new brush. He really did want that brush, but the clerk told him he didn't. In another store just three doors away he bought one. The clerk said to him after making the sale, "You will want some more shaving soap in a few days—it will save you shopping again if you take an extra tube with you." He purchased another tube because the clerk told him he needed it. A few days later when passing the window of the same store he noticed some shaving mirrors in the window, and he went in and bought one.

"One of those stores is no more. You can easily guess which one it is."

Using the Windows

The law of suggestion through the salesman sold the shaving brush. The law of suggestion conveyed through the window display sold the shaving mirror. Had it not been for the window display featuring mirrors, the chances are that the customer would still be using an old and perhaps inconvenient mirror, instead of the modern shaving mirror which "sold itself" through the medium of the show window. And just at this point the question arises, "How many men are there who would buy shaving mirrors to-day if the proper appeal were made through the many excellent show windows in the cities and towns of Canada. On the other hand the same question might be asked regarding paints. How many pieces of furniture, which need refreshing, are there in the homes of Canadians to-day? How many floors should be painted, or wood-work renovated? How many cans of linoleum finish could be sold if the retailers make a good appeal to the public? The answer in each case is thousands. How can retailers reach these people who should use paint or varnish? There are many ways — advertising, personal contact, bill boards, window displays. The latter is the one I want to refer to briefly at this time. We are just in the midst of the fall season. The indoor months are here. The home should be made as attractive as possible. Many people are willing to spend money to make their home interiors more attractive. But they have to be shown how this can be accomplished. This is where the window comes in useful.

The show window of the retail hardware merchant is the salesman who stands at the front of the store and attracts the attention of the passer-by. There is practically no limit to the value of the show window as a salesman. Whether the show window will be an expert salesman or an ordinary everyday clerk depends on the merchant or his window-trimmer.

Money and time spent in arranging good window displays is money and time well spent, and the investment is one that will yield big returns.

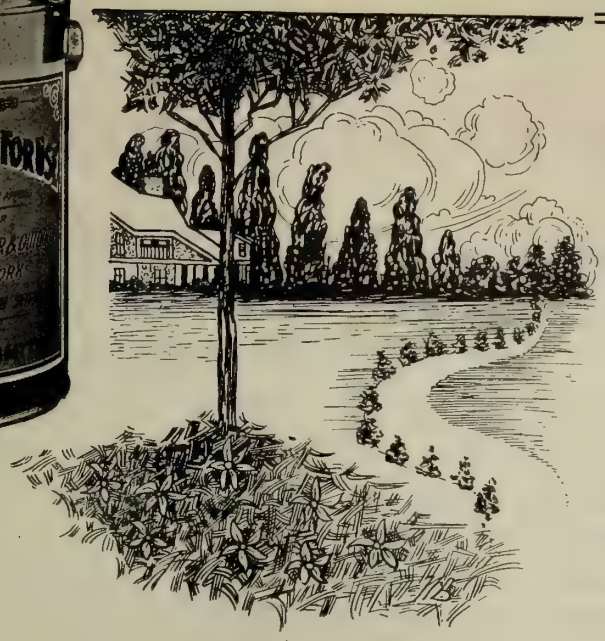
The show window is one of the best, if not the best, advertising mediums at the command of the retail hardwareman, and the latter should take every opportunity to keep his windows up-to-date and in keeping with the ever-changing seasons.

Make It Suggest Something

One important point that should be observed when arranging a window paint display is to embody in it an attention compelling feature—a partly painted object—a pertinent selling talk in a simple, novel manner, so that it will be viewed and understood by the hurrying throng.

In order to fulfil the mission for which it was intended, the display must be looked at by passers-by, and in addition to attracting attention, it must hold it long enough to create the desire for possession. People are usually in a hurry, and they must be attracted by something more than bulk. The real business-bringing window should be as attractive and yet as simple as possible in order to enable the spectator to catch the point of argument.

It is essential to be consistent and persistent in keeping your show or advertising window constantly before the public in an attractive and educational manner.



The window in which the display is changed regularly, and which contains displays that appeal to the public, will be watched closely. The neglected or spasmodic window will usually be passed unnoticed.

The show window is the place to teach the interested public the points and arguments you wish them to learn, and the success of a display or advertising window depends largely upon its appeal to the public.

A STOVE IN A BUCKET

In Holland, where the working people are often at home for a little while at noon, they have the most thrifty arrangement of all—what might be called a portable stove, a stove in an iron bucket. When the children come home from school and the older people from work at noon, instead of lighting the kitchen fire one of the children takes the fire bucket and trots around the corner to the firewoman's. The bucket is just large enough to hold a piece of burning peat or some live coals, and a teakettle sits on top. The old woman who sells fire and hot water fills the bucket and kettle for a tiny sum, and the child goes home with just fire and water enough for the family dinner.—*Hardware Dealers' Magazine.*

Service First

Service is the main idea back of

Jamieson's Pure Prepared Paints and Varnish

because it is service that makes satisfied customers and repeat orders.

But we have not neglected the dealer's interests because every sale nets him a handsome profit and wins the more confidence in him and his store.

Jamieson's Quality and Value make an increase of business certain.

WEEKLY PAINT MARKETS

Montreal

MONTREAL, Nov. 22.—Linseed oil has been the exciting element in the paint business during the week. The general tendencies of the paint trade, apart from this important product, have been peaceful more or less. Lead, however, has shown a serious firmness, and even the ordinarily untroubled surface of the turpentine barrel has experienced a little ripple of possibly speculative unrest. There is no further word yet as to alteration of paint prices upwards, but many manufacturers in Montreal are still deeply considering this almost unavoidable move, and with raw materials at their present cost, a rise in mixed paint prices before spring would seem inevitable. Glass and putty remain in firm condition of market, with an undoubted tendency to higher prices before long.

Linseed Oil Had An Exciting Time

LINSEED OIL.—Something in the nature of a squall struck linseed oil during the week. In a couple of hours the price roamed at record breaking pace up and down through a range of 13c. For one brief period (declared by some to have been after dark) linseed oil was actually buyable at a price which would have meant from 4c to 6c a gallon profit to the seller within an hour. No one seems to have done much buying, however, at the low figure, and daylight of the "morning after" showed linseed looking still a little seedy, perhaps, but nevertheless displaying great firmness, and all its usual strength. Prices as quoted on Wednesday remain as last week's quotations. Most of the manufacturers willing to quote put the price at about $1.15 for raw, and $1.20 for boiled in the smaller lots. The hardware trade was quoting $1.18 and $1.21, but on a very precarious basis of quotations liable to change from day to day. Following shows the range of average prices, while for carload lots crushers were reported to be quoting the $1.15 figure:

Per gallon Imp.	Raw.	Boiled.
1 to 4 bbls. ...	$1.15-1.20	$1.20½-1.25
5 to 9 bbls. ...	1.14-1.19	1.19½-1.24
10 to 25 bbls...	1.13-1.18	1.18½-1.23

Turpentine Keeps Firm on Market

TURPENTINE.—There is a tendency on the part of some manufacturers to discourage sales of turpentine to the retail trade, as this line is declared to be usually a loser. The evaporation of turpentine is very marked, also seepage into the wood of containers, and altogether turpentine is a hard stuff to sell and make money on. At present the cost to retail trade in Montreal is about 70c a gallon. Practically all paint manufacturers have been quoting this figure for some time now, and there has been nothing during the week to disturb the market at all. Reports from Savannah indicate a little more firmness, however, and this may yet materialize in higher prices in this country. Prices are quoted as last week:

	Per Imp. gal.
1 barrel lots	70c-75c
2 to 4 barrels	69c-74c
5 to 10 barrels	68c-73c

Metal and Oil Up White Lead Firm

WHITE LEAD IN OIL.—With the market for pig lead apparently inclined to firmness, and steady firmness, there was a passing inclination on the market towards a change in the price of white lead in oil which has been steady at $13.80 in ton lots and $14.10 in smaller lots for a number of weeks. The tendency was not sufficient to produce action, and prices remain as quoted last week, and certainly no decline in price is expected. With linseed oil so exceedingly high priced and lead going stronger on the market, an increase is far more likely, but the market is wary in voicing any prediction of an actual raise in white lead prices for the present. Demand was reported quiet in some quarters, but one large firm doing an export trade in this product is well satisfied with demand.

Paint Prices Have Room to Rise Yet

MIXED PAINTS.—In the words of one of Montreal's principal manufacturers: "It would be wise policy for retailers doing a considerable spring business in paints to stock up while prices are where they are, for with materials at their present figures an increase in mixed paint prices seems inevitable soon." This might seem merely talk to influence sales, but the prices of the raw materials talk the same way, and the voice of linseed oil, for instance, is loud enough in the land for every retailer interested to listen to and take heed. Another authority on conditions in the paint trade calls attention to the fact that amongst the many lines handled by a retail business selling hardware and paints, the paints will be found to have advanced far less in proportion to the advances of all other lines. To the retailer taking trouble to put this to the proof the evidence will be found convincing enough, and an indication for the foresighted that probably paints may yet come in line with other goods. If they do, the advance will probably be soon.

Cotton Waste Shows Increased Prices

GLASS, PUTTY, WASTE.—Glass is in exceedingly firm market, and will no doubt remain so. The sources of supply in the United States have been in the price-raising mood for a time, and users of glass on a large scale in Montreal predict a further increase. Putty keeps very firm, due to increased cost of oil and of whiting. Gasoline is unchanged in price from last week, still quoting at 27½c. The great firmness in cotton will be found to have altered prices for various lines of waste, and wipers used by painters, which alterations are noted in current quotations for paints, oils, varnishes, glass, etc.

Toronto

TORONTO, Nov. 24.—Business has been seasonably good in paint lines during the week. There has been much uncertainty in the linseed oil situation, and considerable caution is exercised in quoting prices. Some dealers at certain times during the week were out of the market altogether, and were not quoting any prices whatever. Turpentine held firm and in certain quarters registered an advance. There is a feeling abroad among paint men that mixed paint prices must go up. These have not been recorded in any instance as yet. Shellacs and varnishes continue very

Can You Handle The Cream of the Paint Business?

Certainly you can,—you would not admit the contrary even to yourself. But are you getting the *cream* of the paint business? Are you constantly selling your paints for the biggest jobs with the best profit and therefore the least worry to yourself? If you are not,

You Are The Dealer

that should get in touch with Brandram-Henderson now. Make ready for the approach of the indoor season by putting in a line of B-H. paints and varnishes. Their appeal to the homekeeper for interior decoration is instantaneous and their quality attracts the best business.

Make arrangements for a B-H. agency now and this cream of your community's paint business will come to you as surely as water flows down-hill.

If we are not already represented in your district, write to

BRANDRAM-HENDERSON LIMITED

Montreal, Halifax, St. John, Toronto, Winnipeg

If interested, tear out this page and keep with letters to be answered.

firm. Glass has not been changed, but manufacturers intimated in the form of a circular letter during the week that if the present high cost of producing continues there is only one relief for them—higher prices. White lead held stationary and firm.

Linseed Oil Holds In Uncertain Market

LINSEED OIL.—There has been much uncertainty in the linseed oil market during the week owing to the uncertainty of the flax seed market. Fluctuations in the seed market characterized the doings of the week. On Wednesday of last week it was quoted in Winnipeg at $2.59 per bushel. Thursday of the same week it declined to $2.56½, and on Friday went down to $2.50, with a still further decline to $2.48 on Saturday. Fireworks started at the opening of the market on Monday and the price went back to $2.66, a gain of 18c per bushel. On Tuesday of this week it declined again to $2.61½, and on Wednesday, at the close, the price registered was $2.65¼. It will, therefore, be seen that the seed market has had its ups and downs during the week. Dealers have been in an uncertain frame of mind respecting the market. Some were out of the market at certain times during the week, not caring to make quotations in the face of the perplexing situation. Receipts of flax seed at Winnipeg have not been quite as heavy as last week, ranging now in the neighborhood of 35 cars daily as compared with 50 cars last week. Prices have been favorable to the farmers, and they have been letting go on their seed quite freely. Demand for the oil has been rather light during the week. Business has been mostly on a hand-to-mouth basis, contracts for any length of time being practically out of the question. Oil cake is still selling from $45 to $48 per ton. Oil men are of the opinion that the underlying tone of the market is one of strength in view of the shortage of flax seed in the Argentine. They assert that with heavy arrivals in Winnipeg recently prices have been subject to considerable fluctuation. Once deliveries are completed, firmer and higher prices for seed are looked for.

	Raw.	Boiled.
1 to 2 bbls.	$1.11-1.20	$1.14-1.23

6-9 barrels	1.09-1.18	1.12-1.21

Turpentine Advances 2c Gallon During Week

TURPENTINE.—An advance of 2c per gallon was recorded in the price of turpentine during the past week in certain quarters, which now makes the high quotation 76c. Those interests who were quoting at the lower price last week at the time of writing were maintaining their prices of 69c and 70c. There is considerable firmness in the primary turpentine market. At Savannah it is quoted at 46¼c to 46¾c. During the week the price at the high point reached 48c. On November 18 of last year turpentine was quoted in the primary market at 55½c per wine gallon. In the year 1911 it reached its highest point at 75¾c in November of that year. With considerable exporting going on and demand for turpentine in various lines of industry good, there is considerable strength to the turpentine market.

	Per Imp. gal.
1-barrel lots	69c-76c
2 to 5 barrels.....	67½c-75c
6 to 9 barrels.....	66c- ..
5-gallon	74c-83c

Gasoline Holding Steady in Price

GASOLINE.—Although there has been a firmness in the crude oil market during the week, the price of gasoline has held steady. In Toronto it is still quoted at 26½c to 27c. The demand has been fairly good during the week. Cool bright days have been conducive to motoring, and this has kept the consumption up to a fairly high level. Benzine is still quoted at 1c under gasoline. There is prospect that the market will hold at present levels for some time at least.

Shortage of Natural Gas Affecting Glass

GLASS.—Some of the American manufacturers have advised local dealers in window glass that if the present state of the raw material market continues they will be compelled to advance the price of glass. They point out that the shortage in natural gas has affected the production of glass, and that it has consequently been curtailed. It is also pointed out that there is a shortage in some raw materials, and that the car shortage is affecting the transportation of goods. One firm in particular notified the trade that they reserved the right to decline any offers for orders of glass at present outstanding prices. "If the present condition of affairs continues we will be compelled to advance the price of glass," stated the manufacturer in question. While this condition has been outlined by some of the manufacturers in many instances among the trade higher prices for glass are felt not to be justified owing to smaller consumption of glass as compared with normal times.

Famine in Shellac is Anticipated

VARNISH AND SHELLAC.—There is an increased firmness in both the varnish and shellac markets. There have been large quantities of varnish used by manufacturing concerns, and this, coupled with the difficulty of getting the raw materials, has brought about a condition that to some dealers undoubtedly looks like higher prices in the near future. In the shellac market there is a threatened famine owing to the difficulty of getting supplies from India of the gum. Shipping facilities have been poor in the first place, and an embargo has further added to the problem of getting raw materials to market. A further advance was reported in the Calcutta market during the week, and this was reflected in the New York market, where prices advanced for gum shellac from 38c to 39½c per pound. Locally gum shellac is still quoted at 34c per pound.

White Lead Holds in Firm Market

WHITE LEAD.—Prices for white lead in oil have held stationary during the week. There is a firmness in the product owing to the slightly higher price being paid for pig lead in the New York market. In that market the pig lead is reported strong. Locally the demand has been light, with prices remaining at $14.25 per 100 pounds in small lots and $13.95 in ton lots.

PRACTICAL SHEET METAL WORK

(Continued from page 53.)

used where there is any danger of the water or moisture freezing. The corrugations are necessary so as to take care of expansion by freezing and will prevent breaking or cracking.

Another matter, too, is that of making flexible offsets where one end or part is rigid and no provision is made for endwise expansion and contraction, such as, for instance, is shown in Fig. 4. It would be well to make the connection with a piece of lead pipe; that is, if an offset is used close to the hopper.

(Continued in next issue).

ONTARIO OIL AND TURPENTINE CO. FORMED

Succeeds Colonial Varnish & Color Co.

A company has been formed to do business at Toronto under the name of the Ontario Oil & Turpentine Co., to take over the contracts and agencies of the Colonial Varnish & Color Co. R. Pinchin, who has been manager of the Colonial Varnish & Color Co. for the past two years, will be manager of the new company. Interviewed by HARDWARE AND METAL, Mr. Pinchin stated that the linseed oil and turpentine business of the Colonial Varnish & Color Co. has increased to a point where additional warehouse and railroad siding facilities have to be secured. On this account it has been thought advisable to form the new company to take care of this rapidly developing department.

A Straight Talk from the Manager

No. 52

Use the Want Ad. Page

This is time of year when staff changes are in order.

Many dealers will want new clerks. Many manufacturers will want new travellers. Many travellers and many clerks will want new positions.

The surest way for employer and employe in the hardware trade to come together is to advertise in Hardware and Metal's Want Ad. Page. Its position, hereafter, will be on page opposite Index to Advertisements. In this week's issue turn to page 83.

By the use of Box Number, advertisers are assured that their names will not be disclosed.

What do ***you*** want? Get it through advertising in Hardware and Metal's Want Ad. Page.

Re Gauges and Prices of Sheets.

Prices on black and galvanized sheets given below are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	5 50	5 50
12 gauge	5 75	5 75

ASK the man who sells them

"The man behind the gun" is the man who can best testify as to its merits and the man who sells paints and varnishes is the one who can give the best verdict as to their selling qualities.

Martin-Senour Paints and Varnishes attract and retain patronage. They are sure re-order getters everywhere.

MARTIN-SENOUR
PAINTS AND VARNISHES
MADE IN CANADA — SOLD ON MERIT

This is what one of our aggressive dealer agents, who has gladly accepted and profited by our selling co-operation, has to say of the Martin-Senour exclusive agency:

Bruce Mines, Ont., July 31st, 1915.

The Martin-Senour Co., Limited,
Montreal.

Dear Sirs:

Yours to hand, in which you state you are sending a further supply of advertising material. I wish to thank you kindly for your interest in the matter, and I feel sure they will be up to the standard of all other products of the Martin-Senour Company.

I also wish to express my satisfaction with the pleasant business relations I have enjoyed with your firm. It certainly is a pleasure to do business with your company, and the goods are such that you can live, move, and talk Martin-Senour products and not be liable to wake up some morning and find out it was a nightmare, and that the goods were not what you thought they were.

Yours truly,

E. A. WHITE.

Let us supply you with the names of scores of other satisfied and successful dealer agents.

Your Wholesaler Can Supply You

Made in Canada by

The Allan Munro Color Co., Limited, Montreal

The popularity of your store depends mostly on the stock you carry. Talking of Paint, there is no better seller than Ramsay's and every can is a can of satisfaction. Since 1842 Ramsay's Paints and Varnishes have been made right and have proved their ability to stay right. Color and quality are fixed. Ramsay's complete line "is" complete, and that's the line of paint for you to carry if you would make yours the most popular store in town.

Are You Selling

UNIVERNISH?

It sells itself and you can make money the same as many other dealers are doing.

GOOD ANYWHERE—— GOOD EVERYWHERE

Gives perfect results on Pianos, all kinds of furniture, floors, automobiles, in fact anywhere where varnish is required.

Put up in handsome display cases of twelve quarter pint cans to retail at 25c. each. Also in all regular larger sizes. Get some to-day. It will go quickly.

If you have a business to dispose of, or are in need of efficient help, try a Want Ad. in Hardware and Metal, and let it assist you in filling your needs.

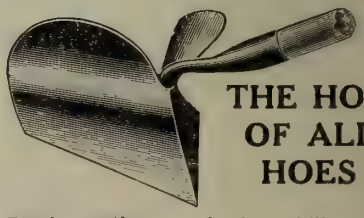
COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.



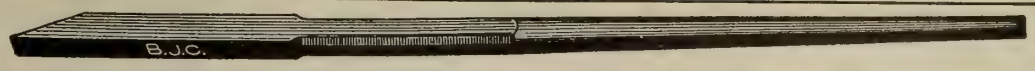
The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

The Wm. Cane & Sons Co., Limited

Makers of the New Wooden Wash Board
NEWMARKET, ONT.



THE HOE OF ALL HOES

Breaks up the ground, plows, hills, cuts weeds and cultivates the soil and does the work in half the time, and better, easier and more satisfactorily.

Manufactured by
SCHOENER MFG. COMPANY
St. Cloud, Minn.
Western Canadian Distributors:
Merrick-Anderson Co., Winnipeg, Man.

ROBERT DONALDSON & SONS, Montreal

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Auger Bits, Bolts and Nuts, Bolster Springs, Chain, Drills, Files, Handles, Horseshoes.

DEALERS, ATTENTION

NOVELTY SELF-FEEDER *HOT AIR* FURNACES *are the best sellers*

The whole trade wants them because they make sales; because they save—
TIME, LABOR, COAL

Because they heat equally
ALL DAY and ALL NIGHT

The self-feeder principle places "NOVELTY" furnaces, which have been leaders for 30 years, away ahead of all others and—
THEY COST NO MORE

Write now for Catalog and Prices.

Toronto Furnace & Crematory Company, Limited

HEAD OFFICE :
111 King St. East, TORONTO

See our display, Stove Building, at Toronto National Exhibition.

LONDON HIGH GRADE BARIRON

We have economical and correct methods of production, which means that you get bar iron that is absolutely reliable in toughness, strength and workability at the lowest prices.
The consignments you receive from time to time are the same through and through.
Carry a stock for your customers—a splendid profit awaits you. If you prefer we can ship direct from mill.

London Rolling Mills Co., Limited, London, Canada
Sales Agents:
Manitoba, Bissett & Webb, Limited, Winnipeg; British Columbia, McPherson & Teetzel, Vancouver.

I.N.C. NICKEL

Shot—High and low carbon. Ingots—Two sizes, 25 lbs., 50 lbs.

ANY Saw will show a profit, DISSTON SAWS do MORE

Anything a dealer sells will net him a profit at a given figure, but the progressive dealer demands more from the goods he carries than the mere profit in their sale. He selects such goods as will best reflect the policy and personality of his establishment; goods that will advertise the high standard of excellence of his entire line; goods that are a credit to him and his store, both before and after they have been sold. Customer satisfaction and good-will are not fostered by the sale of inferior tools, and good-will is indispensable. That's why the live dealer demands the profit, **plus.**

Disston Saws mean more than quick and easy sales, due to a world-wide popularity (more Disston Handsaws are sold than other makes combined). They are the brand most frequently called for, but that is not all. Disston Saws are backed by three-quarters of a century of saw-making; they are made in a plant whose magnitude dwarfs all others, and where the refinement of process and equipment surpasses anything possible on a smaller scale of production. And this high standard of quality is the dealer's best route to his greatest possible asset—customer confidence.

The Profit on a Job

depends many times as you very well know, on right *time* calculations for the doing of its various parts or operations. Any loss of time eats into profits and may wipe them out entirely.

In the processes of *REAMING*, to take care of the time factor,

Butterfield Tools

which are *guaranteed* fast cutters and clean workers, should be used.

Butterfield Taps, Dies and Reamers (see illustrations) are sturdy, honest and keen as all good workmen are. And they may be said to be *intelligent* also. For they are the products of the highest intelligence found by experience.

ANNOUNCES

Owing to the big increase in the

Oil and Turpentine

part of our business, we have found it necessary to secure additional warehouse and railroad siding facilities.

With this in view a new company has been formed under the name of

The Ontario Oil and Turpentine Co.

who have taken over our contracts and agencies.

Mr. R. Pinchin, who has had charge of this business for the past two years, will act as manager of the new company.

We guarantee the purity of the Turpentine, imported through the Western Rosin and Turpentine Company, and the Crushers stand as your guarantee that the Linseed Oil sold you is absolutely pure.

Address of New Company

20 FRANCIS STREET, TORONTO

"NORCROSS"

CULTIVATOR--HOES and WEEDERS

Quick and Very Profitable Sellers

Garden implements with the human touch. You can cultivate closer to plants without injuring them than with any other kind of garden tool, leaving the soil level, loose and untrampled.

Cost but little more than the ordinary hoe, but they do much more and better work with less labor. Once used, always used.

Write for full particulars.

C. S. NORCROSS & SONS, BUSHNELL, ILL., U.S.A.

EVERY month in MacLean's Magazine, and nowhere else will you find the best work of the best Canadian writers.

In MacLean's Magazine, and in no other Canadian publication will you find a synopsis of the best work of the world's best writers every month.

It is different from any other magazine.

Sample on request.

The MacLean Publishing Co., Limited
143-153 University Avenue - Toronto, Canada

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS VACANT

HARDWARE TRAVELLERS WANTED TO carry as side line a popular priced paper baling machine. Exclusive territory. Every dealer a prospect. Box 409, Hardware and Metal, Toronto.

WANTED — AN EXPERIENCED HARDware clerk. Apply, stating experience, wages expected, also give references, to Box 270, Orillia, Ont. (45)

WANTED — AN ALERT TRAVELLING salesman with hardware connections in Province of New Brunswick, to represent a large Canadian paint and varnish manufacturer. Apply to Sales Manager, P.O. Box 429, Montreal. (45)

WANTED—TWO LOCK AND HARDWARE travelling salesmen by a prominent Manufacturer. One to cover Eastern and the other Western Canada. Experience in the sales of both stock and contract builders' hardware necessary. Address X. Y. Z., Box 404, Hardware and Metal. (45)

SITUATIONS WANTED

HARDWARE MAN, FIFTEEN YEARS' EXperience, retail manager and buyer for large hardware firm, desires change, where interest would be given in business. Box 408 Hardware and Metal.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

MANUFACTURERS DESIRING TO BE represented in Manitoba, territory fully covered by salesmen, write us what you have, giving full particulars. Mitchell & McGregor, Ltd., Brandon, Man.

MANUFACTURERS' AGENT IN CANADA desires Canadian rights on small article to sell through display advertising. Correspondence and catalogues solicited. Frank R. Burgess, 407 Hope Chambers, Ottawa, Canada.

WANTED. WE HAVE AN OPENING TO represent one more good factory (Canadian) for British Columbia, Alberta and Saskatchewan. Must have possibility of large overturn. The F. R. Murray Co., Ltd., 117 Pender Street West, Vancouver, British Columbia.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

BUSINESS CHANCES

HARDWARE STOCK—ABOUT FIVE THOUsand, doing profitable business in Ontario town, for sale. Owing to ill-health I will sell at a rate on the dollar for quick sale. Investigate. Box 407, Hardware and Metal.

TO SELL—HARDWARE STOCK AND FIXtures in a live western Ontario town. About six thousand dollars will handle. Reasons for selling. Will gladly furnish any information desired. Apply Box 405, Hardware and Metal.

HARDWARE BUSINESS IN HAMILTON for sale. Stock and fixtures about $5,000. Store and dwelling could be carried on $3,000. Box 406, Hardware and Metal, Toronto.

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

WANTED

WANTED — GOOD HARDWARE BUSIness. Give complete information; will investigate immediately. Box 410, Hardware and Metal, Toronto.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

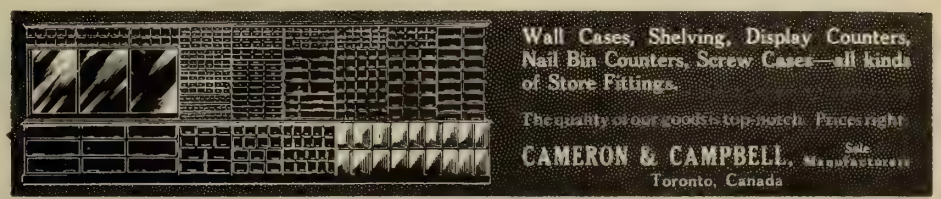
ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

FORGETTING



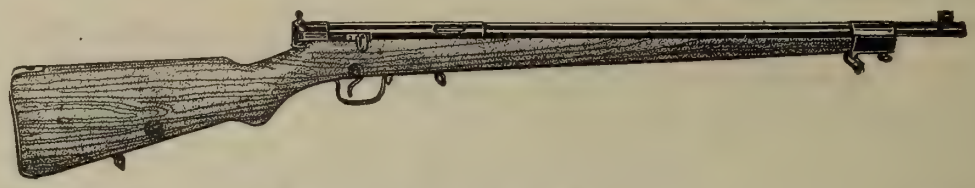
One of the things we all do well is to **forget.**

Names that were household words yesterday are gone to-day.

Because people knew your Name and your Line a year ago it is no sign they do to-day. They forget easily.

Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.

KINDLY MENTION THIS PAPER WHEN WRITING ADVERTISERS



You can talk across the continent or two cents per word with a WANT AD. in this paper.

An Early Christmas Showing of Ross Rifles

Is Sure to Attract Profitable Trade

Boys and girls are thinking of what they want for Christmas. A display of Ross .22 Cadet Rifles is sure to catch their eye. Once they see this splendid little gun, there is no rest for their parents until, convinced that it is no toy but a perfectly safe and reliable rifle, they put a Ross Cadet into the Christmas stocking.

When ordering don't forget the grown-ups — nothing attracts quicker attention than a display of Ross Sporting Rifles. Ross Sporting Models retail at $25.00 and up, Ross .22 Cadet at $12.00. For catalogue, discounts, etc., address

McKINNON
ELECTRIC SWELL-WELD
CHAIN

Tests taken at McGill University have proved our ELECTRIC WELDED chain to be fully 25% STRONGER than B.B.B. FIRE WELDED chain. The chain tested was taken from the stock of a Montreal Jobber.

The three principal reasons for this increased strength are: 25% more welding surface allowed by the swell-weld, special analysis material, and care in manufacture. It is only natural that successful products should be imitated. Protect yourself by asking for McKinnon Chain.

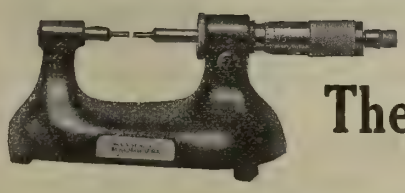
Speeding Up The Final Test



The final inspection of duplicate parts and other small pieces is so important that it frequently serves as an excuse for inefficiency.

That excuse is unnecessary—absolute precision can be maintained and rapid work insured with a Starrett Bench Micrometer.

This instrument combines the scope and variety of use of a micrometer with the convenience and speed of a fixed gage. The heavy base gives a stability that increases the inspector's speed, while the micrometer adjustment permits wide range of work, and the lock nut gives all the value of a solid gage in measuring parts of the same size.

Hardware salesmen who emphasize this point can make sales to the manufacturer—but you must **create** your prospects. Go to them—don't wait for them to come to you.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

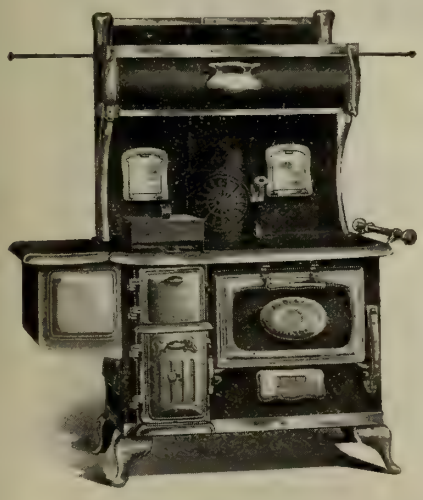
KIR-BEN
TRADE MARK

The Kir-Ben Steel Range

You'll find no bluff about anything named Kir-Ben. Take the Kir-Ben Steel Range for example. It is built for business—not built for show, or to make money with, but built to render the service required of a Steel Range, and to give this service in fullest measure.

Here are condensed specifications:

Design—Neat and plain. No fussy ornamentation or fancy nickel.



Construction—The Kir-Ben Steel Range is very heavy, lined throughout with Asbestos and Steel. Roomy Firebox (will use wood 27" long); Duplex grates. Special wood firebox. Dead air space beneath oven, to keep flue warm and oven even.

Improved Flue—So constructed that heat covers five sides (all but the door), so is 25% better than ranges which heat only four sides, as is general. Heat in a Kir-Ben makes only four turns, as against six turns in other makes, so 33 1-3% less friction. So fuel is saved.

Oven—Very large (20¾ x 20 x 12½). Perfectly square door, is evenly balanced, and opens evenly and quickly. Door has two inches dead air space to prevent chilling of oven.

Thermometer—A decided convenience.

Economic Damper—Greatest efficiency device ever put on a Range. Means a saving of fuel of from 15 to 35%. The one device that gives absolute control of fire under all conditions. These are some outstanding features which make the Kir-Ben Steel Range distinctive, better and best.

But why not have one catalogue? And why not be the Kir-Ben Agent for your territory?

It is a valuable agency to have, not alone because of the merit of the range, but because of the assistance we gain in finding customers and making sales.

Will you write us?

Stanley Tools

Made in Canada

The illustration above shows a line of Screw Drivers which should be in the store of every dealer who prides himself upon carrying a complete stock of tools.

It is an assortment of SPECIALS that will appeal to many of your customers.

For instance—No. 21 shown at the extreme right of the picture—blade only 1½ inches long, just fits the vest pocket, a strong little Driver and very handy.

Also No. 60 — shown at the left — only 1⅝-inch blade but with a big sure grip handle. For heavy work into close corners it cannot be beaten. Used by Plumbers, Machinists, Millwrights, etc.

Nos. 51, 52 and 53—Called MACHINISTS' DRIVERS — big, broad tips for large screws and extra large shanks for heavy work.

Nos. 51½, 52½ and 53½—also Machinists' Drivers, have hexagon nut on shank for use with a wrench.

No. 54—Note the DOUBLE GRIP, also the hexagon feature for wrench. With this latter Driver one can turn anything.

We make other drivers. See Catalogue.

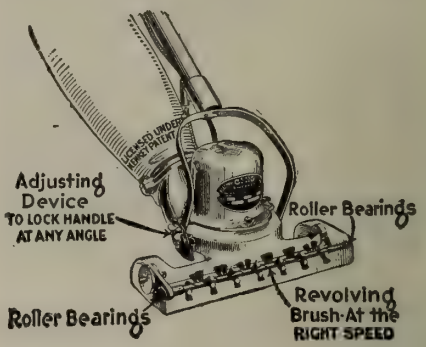
—better to make three EFFECTIVE reaches for business than one



A light-weight, easily operated, conveniently designed, durably constructed Cleaner for home use.

A large and powerful household machine with fourteen-inch nozzle. For large homes and apartments where fast cleaning is required.

A still more powerful machine — especially designed for extra-heavy duty. Adapted to service in large buildings, hotels, stores, etc.

A principle that has made good

A policy that has made good

We stand squarely behind every OHIO machine we sell. Common sense tells us that it is more economical to utilize the best materials obtainable than to be continually called upon to replace defective parts.

OHIO STANDARDIZATION HAS MADE GOOD

We have standardized the OHIO by eliminating all the non-essentials and incorporating all the essentials.

Everything has been adopted that has been found practical by actual experience in the hands of our users.

We know it is your desire to give your customers the best the market affords. Also it is our desire to offer you the best that can be manufactured.

The Ohio Proposition has made good with dealers.

Write us for it.

THE UNITED ELECTRIC COMPANY

CANTON, OHIO, U.S.A.

We also manufacture and sell the famous Tuec Stationary Cleaners, more of which are installed than all other types combined.

TORONTO: 159 RICHMOND STREET WEST

A GOOD SEASON AT HAND

With harvesting and threshing at hand—and lanterns being put into commission for the long nights—the demand for Dry Cells is heavy. Price is of less concern than the service the article performs. An old battery is a poor investment—it breeds dissatisfaction on the customer's part and criticism for the dealer.

All Western hardwaremen should stock the NORTH STAR NO. 6. You always get it fresh. It gives satisfaction to the customer—profit to the dealer, and credit to the manufacturer.

THE WESTERN BATTERY FOR THE WESTERN NEED

Have your jobber supply you.

CANADA DRY CELLS, LIMITED, WINNIPEG, CANADA

The sale is Big—

The Home Comfort Steel Range has been sold at the rate of 2,500 a year for the past 25 years.

"Home Comfort" Steel Range

was sold direct to the consumer for over 15 years. Direct-to-the-consumer method of doing business brought us constantly in direct contact with buyers and users—the woman in the home—and enabled us to make our product to suit the ideals of practically every housewife.

Material, workmanship and working qualities are the very best.

The profit is large—and satisfaction double-sure. Write for specifications and our attractive dealer proposition.

Vol. 28 TORONTO, DECEMBER 2, 1916 No. 49

A Christmas Window Suggestion

THE Christmas season is now so close at hand that the attention of the hardwareman must be largely focussed on the question of Christmas trade. It is very important that plans should be at once prepared for the Christmas advertising and window trimming campaigns; and, in order to assist in the latter respect the accompanying reproduction of a Christmas window is presented for the wealth of practical suggestion that it contains.

This display was arranged by C. H. Smith for the J. H. Ashdown Hardware Co., Calgary. Its chief virtue is the undoubted "selling force" that it contains. The "pulling" qualities of the window are due very largely to its "stockiness"—it presents in admirable arrangement, a very large assortment of Christmas goods. That the best holiday trims are generally stocky is a rule that has been established by long experience.

It is the intention of HARDWARE AND METAL to present in succeeding issues others trims which will serve as excellent suggestions for the Christmas campaign.

Plans to Systematize Buying

How Some Men Follow Market Trends Closely—Trade Papers and Catalogues are Mines of Valuable Information—Going to the Market—How Successful Merchants Handle Their Buying Departments

IN the following article, reprinted from *System*, appears very valuable information with reference to the buying methods of men in many lines of business. Special stress is laid on retail purchasing problems, so that the article has the keenest interest for the merchant, particularly at this time when the markets are so uncertain.

Two years ago, when the war cut off a large share of the immediate demand for this country's cotton crops, the "buy-a-bale-of-cotton" idea was vigorously advertised. A Wisconsin manufacturer saw, in the unusual conditions of the market, a buying opportunity for himself. He contracted for two years' supply of the cotton yarns that he uses in large quantities in the manufacture of his products. Spinning mills were glad to get his contracts at the time when they were able to buy the raw cotton cheaply. They agreed on a price of fifteen cents per pound for the first year's supply, and sixteen cents per found for the second year's.

Subsequent market conditions proved the manufacturer's wisdom in placing his contracts as he did. While many of his competitors have been paying twenty and twenty-two cents for their yarns, his needs have been covered by contracts running from four to six cents less per pound for the second year's.

This happens to be only one of the many good "buys" of this manufacturer. His purchasing skill is not due to luck, but to his policy of keeping always in very close touch with his markets. He is a careful student of factors that may affect the prices of the principal products that he has to buy, sending them up or down. He buys, in other words, with a full knowledge of how certain conditions of supply and demand have reacted on prices in the past, and with this information he can usually determine pretty accurately how a given market condition will cause prices on the same products to act again. He buys accordingly.

He reasoned in this instance that it had been many years since he saw cotton so cheap: That conditions were certain to readjust themselves in a short time so the extra supply would be taken up; and that then the price would naturally go up also.

Of course it is not always possible to guess correctly, because a very large number of factors enter into the making of most prices. The wages paid to coal miners, for instance, may have a definite, though remote, effect on the price of unbranded underwear; because of the higher wages it costs more to mine the coal, and the price advances in iron and steel—where, again, there may also be wage increases to call for still further price advances; freight rates may advance; the underwear manufacturer, as a result, may have to pay more for his machines, needles and repair parts, and for having his raw materials delivered to him. His unit cost of manufacture increases, and it is easiest to place the additional cost on his unbranded goods, the price of which to consumers has not been standardized.

Most good buyers get results by visiting the market in person.

This good "Buy" resulted from a close study of the markets.

Seeing in advance the effect a given set of conditions will have on prices is usually one of the best ways for the man who buys to effect economies. When steel began to advance shortly after the war, a Columbus manufacturer covered his needs for a long period at $12 a ton. Within a short time many of his competitors were paying $18 and $19.

In this instance the manufacturer simply analyzed the conditions that have a bearing on the price of steel. The manufacturers, he knew, had to pay for their ore, more for their fine tools, more for coke, lubricating oils and labor and it was logical for the price of the finished product to go up.

Considering all the elements, therefore, that may enter into the setting of any price, careful study is essential in order to foresee the probable market movements. It is perhaps just as important to know beforehand about the coming price declines as about the probable advances. To be caught with a heavy stock bought when prices have reached the "peak" and are beginning to tumble, may cause the buyer to lose as much money as he would if he failed to cover his needs when prices were low and he was consequently forced to buy heavily at a high figure.

In spite of the intricate problems encountered in following the factors that affect prices, many men find the problem simplifies itself when they decide on the two or three kinds of raw materials that they buy in the largest quantities. They can then concentrate on a study of the market conditions affecting these few materials, and so become expert in picking the right time to buy.

Some of the principal methods that men who buy use to keep in touch with the market conditions are the following:

1.—Watching the general news, and also the more detailed information that is commonly contained in trade papers.

2.—Gathering and consulting the catalogs of as many supply houses as possible.

3.—Keeping records—often graphic—of price changes, and making regular notations about market conditions.

4.—Corresponding regularly with supply houses.

5.—Visiting the market in person.

6.—Certain special methods which are used by individuals, but which can often be adapted to the needs of others.

7.—Consulting with salesmen who call to represent the various supply houses.

There is much in the general news of the day that may have an effect on prices, or make the immediate placing of orders important. A railroad strike or tie-ups at principal sources, the discovery of new sources, political changes and many other factors may have a direct bearing on the work of the man who buys. The outbreak of the European war was such a factor, and one almost unprecedented in the charactered of the changes it caused in buying plans.

The Value of Trade Papers

Even more helpfully than in the general news, market conditions of first importance are usually reflected in the trade papers.

"I consider the trade papers which I get," says a middle-western buyer, "one of my most important sources of information in regard to prices, fundamental conditions, the orders that are being placed and the like. My main purchases consist of iron or steel and allied products and the papers have information that is brought up to date daily.

"Of course, I have to draw my own conclusions from the information I glean from the papers. And usually I can guess correctly when I take enough time to figure out before placing an order what the probable tendencies are. Failure to do that may result disastrously. For instance, some months ago spelter began to rise. A normal price for spelter would be somewhere around six cents. The price went up and up, however, and at the 'peak' of the curve reached about thirty-two cents.

"I was short, and placed an order for a three months' supply at twenty-eight cents. That was a bad buy. A more careful analysis of conditions would have shown me that the rise in price must be due to inflation. Spelter was not used in the war, and there were no known unusual demands or conditions of supply at home.

"As a matter of fact, only a little while later ,when others like myself had bought rather heavily on the scaring market, the price rapidly declined. I could have placed hand-to-mouth orders while the price was up, if I had studied conditions more carefully, and thereby saved considerable money."

A retail merchant in the South finds that in addition to the trade papers, catalogs of the various wholesalers and manufacturers in his line—issued by both those he buys from regularly and those he seldom patronizes—are his most valuable sources of information. He studies each new catalog with care when it comes, and places it on file for immediate reference in his "catalog library."

Supply buyers and purchasing agents also find a complete set of catalogs and price lists—sometimes thoroughly card-indexed—very valuable in locating small items they need to buy, where it might take too much time or cost too much money if they were to ask for competitive bids.

In watching the markets on items which form a major portion of purchases, many of the men who buy, find it helps them to keep graphic records and make an intensive study of conditions. For instance, the purchasing agent in an oil concern which sells both at wholesale and retail has a few charts, corrected daily, which show him instantly the trend of the markets for three years past. On one of these charts the curves represent the comparative prices of corn oil, cottonseed oil and linseed oil.

The purpose of keeping these three items on the same chart is to see if the prices have a tendency to go up and down together, in response to the same conditions of supply and demand. For instance, when the flax crop is poor and linseed oil is high, do corn oil and cottonseed oil also show a similar tendency to rise? Interesting conclusions may be drawn from the study of this and similar charts, and they are helpful in selecting the right time to buy.

"I always notice when marked changes in prices occur," says this purchasing agent, "and try to determine each time just what the reason behind the fluctuation was. I figure that if I know what caused prices to go up or down in these specific instances, I can watch for the same conditions if they come up again; and in that way I can judge what the present effect on the prices is likely to be. Quite often I can get in my orders ahead of an anticipated rise. My aim is always to buy when the curve of prices for any product is at the lowest point and is just beginning to turn upward .

"The sooner I detect a positive upward trend, the better for me. Sometimes I find the curve takes what you might call 'false starts.' The price goes up a notch or two, and an unwary buyer might figure it was time to order. Often, however, the curve will turn the other way again in a few days and go quite a bit below the previous low level. Genuine knowledge of the markets and of the conditions that really make prices rise is the only thing that can prevent buying on the "false starts."

Another purchasing agent gets similar results from a book in which he tabulates daily the prices on certain materials he has to buy regularly. Figures are not so graphic as a curve, he says, but the exact shadings and differences in price are before him perhaps even more clearly than they would be if charted out.

"One of the special plans I use to keep in touch with conditions," this man says, "is to write frankly to the concerns from which I buy, whenever I am puzzled about any of my buying problems. The suppliers are nearly always as closely in touch with conditions as anybody can be. Since I am one of their customers, I find them uniformly pleased to send me any information they can, in the same frank spirit that I ask for it."

Correspondence of this sort is an effective method, as far as it goes. But nearly most buyers emphasize also the importance of visiting the markets in person and getting information about conditions firsthand. One purchasing agent who has two assistants insists on their going away for at least two trips a year. "It shakes out the hayseeds," he explains, "gives them a more accurate idea of our supply houses than they could obtain in any other way, and they form definite ideas of the quality and quantity of goods the various houses can furnish, and the probable character of their service."

"In buying for our store," says an Ohio merchandise man, "it is quite essential for our buyers to go to market. Some of them go as often as once a month. Few go less often than once every six weeks. Our principal markets are Chicago, New York, Cleveland, Detroit and St. Louis, and the buyers on each trip seldom stay longer than one week."

On these trips the buyers usually know in a general way what they want to buy. But they pick up special information at the various concerns which they visit, and look over the new offerings. A method they are uniformly advised to follow is never to place orders while they are in the salesrooms of suppliers. They merely go over all the lines and make notes about

(Continued on page 40.)

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, DECEMBER 2, 1916 No. 49

EDITORIAL BRIEFS

WINTER can't come too soon—in Roumania.

* * *

THE NEW Minister of Militia, be it noted, is a business man.

* * *

PERSONAL Note: C. U. T. Nails, Esq., has joined the Alpine Club.

* * *

DESPITE the high cost of living there is less want to-day than ever before.

* * *

IT'S AFTER all just Supply and Demand. We are paying more because we are selling more.

THE NEW MINISTER OF MILITIA

THE appointment of Hon. A. E. Kemp as Minister of Militia did not come as a surprise. Mr. Kemp's work as Chairman of the War Purchasing Commission and as acting Minister had put him in close touch with the department and left him the most likely successor to the ebullient Sir Sam.

It is a good sign that the new Minister is a business man—and a successful one. War, after all, is a question of the organization of resources. The skill, judgment and foresight that are required to conduct a large manufacturing business are the qualities that are needed to make a success in an important cabinet position which calls for skill in organization.

Mr. Kemp steps into the breach at a crucial time. Canada needs a big man on the job—a man with all the energy and forcefulness of Hughes and without the weaknesses that detracted from the late Minister's usefulness. It is sincerely to be hoped that the new Minister of Militia will measure up in every way to his gigantic opportunity.

IT PAYS TO ADVERTISE

YES, but do you believe it? Of course everyone believes it theoretically. Do you put your theory into practice, or do you figure you can get along without it? Maybe you can pull through without it. Yet consider this little item from Bradstreet's report of 1915. Out of 100 failures in business 92 firms or 92 per cent. had not advertised and 8 firms or 8 per cent. had advertised spasmodically or sparingly. Ninety-two firms decided that they could pull through without advertising. Be it noted that in this number there were 92 mistakes. Why range yourself with a proposition where the proportion of mistakes is so high.

W. L. Douglas owned a small shoe making plant. He made good shoes, but as few people knew few people bought them. This idea struck Douglas and he started to advertise. That was many years ago, but he is pounding away yet. Did it pay? Douglas is a millionaire many times over, and his shoes are sold wherever shoes are worn.

The men who didn't and the man who did. Do you believe in advertising?

Your condition renders advertising unnecessary. Here is the most popular fallacy of all. Even practical monopolies have found this out.

Whenever you spend a night on a train, you travel in a Pullman. Speaking generally, you have to do it. The Pullman Company is practically a monopoly. You have to patronize them—and for forty or more years they have sat back satisfied that advertising didn't pay; for them. Did it, or did it not? The Pullman Company to-day is spending hundreds of thousands of dollars in advertising. You can see it in many periodicals. What do they gain by it? Who knows? Some tangible good evidently, their actions are eloquent of that.

Advertising unnecessary? The New York telephone company controls New York. To compete with it would cost another company untold millions of outlay; and in the very nature of its business a telephone company must be a monopoly. No need to advertise said the company in 1914, but a broader policy was inaugurated the next year. Did it succeed? The year's business showed an increase of $1,027,000 over the last non-advertising year.

Why add illustrations. You can't open your eyes without seeing, activities or fortunes or men, made by advertising.

THE ADVANCE IN PAINTS

THE most important news of the week is unquestionably the advances announced in mixed paints, varnishes and sundries. The new prices have been made necessary by the increased cost of all materials and the very materially advanced costs of manufacturing that have been faced. The situation has been such, in fact, that to those in possession of the full facts, the increases in paint prices have appeared inevitable for some time. HARDWARE AND METAL has been pointing out the certainty of increases for some time back; and dealers who availed themselves of this information and ordered on the strength of it will be very considerably in pocket as a result. Thus is demonstrated again the importance, nay the absolute necessity, of following the market reports in HARDWARE AND METAL.

The references frequently made in these columns to market predictions that have come true are not inserted with a desire to laud the excellence of the market service that HARDWARE AND METAL is giving, but purely and simply to impress on readers the fact that they should never fail to read the reports from start to finish.

The situation created by the new paint prices is simply this: The hardwareman must advance his prices proportionately. The action of the manufacturers is quite justified by the conditions of manufacture, and the retailer need have no compunction in covering himself fully.

A READY smile wins more friends than years of self-denial under a sour manner.

THE POWER OF THE PRINTED WORD

IN a recent issue of the Philadelphia *Saturday Evening Post,* appears an article by Maude Radford Warren on "A Nation Run by an Advertising Man." It is a vivid account of the greatest advertising campaign that the world has ever known, conducted in a country where to all intents and purpose advertising, at least as we understand it, was almost unknown.

Sir Hedley le Bas not only inaugurated a great advertising system, but he put it across. He proved to a conclusion his own contention that "you can get anything you want by advertising." He not only was largely responsible for raising an army of 4,000,000 men in a year, but he was behind the first English war loans—now he is preaching economy—preaching it in the newspapers in flaring full pages in the magazines, in bill boards that scream across the erstwhile quiet English landscape. Yes, and the Englishman believes them. He walks instead of taking his car. He eats simpler foods, he lives altogether a simpler life, because Sir Hedley has told him, and told him in letters that he who runs may read that "when you spend on things you do not need you help the Germans."—"Because every shilling saved helps twice; first when you don't spend it; and again, when you lend it to the nation."

Here are a few advertising propositions outlined by Sir Hedley, while head of a great publishing house, and before the dark shadow of war, had made him the guardian of a nation's conduct.

"You must state in your advertisement nothing but the truth; not as it appears to the manufacturer, but as it can be demonstrated to the prospective buyer.

"You must have the courage to take a sufficiently large space; for the larger the space, the greater the chance of success.

"You must have the courage to give advertising a fair trial.

"You must have judgment in selecting the right media through which to appeal to the public.

"You must remember, in massing your advertisement, that the theory of successful warfare is an overwhelming attack at a given point."

Is there weight in this advice?

Think of the man who holds a great nation in the hollow of his hand, because he knew the power of the printed word.

PUNCH, psychology, individuality and other high-sounding, three-ply words are merely names for what our fathers called "Hoss-sense."

THE CORDAGE SITUATION

IN the market reports appear details of the advance in all cordage. This announcement, coming on the heels of the first booking of spring orders, will be somewhat in the nature of a surprise to the trade. In fact, the cordage men themselves did not anticipate that it would be necessary to make advances so soon after the start of spring booking; although, of course, the market has been very firm and it was realized that the new prices were inevitable sooner or later. All raw fibres have been steadily going higher and this has created a situation which brought into effect the cordage increases now advanced.

WHAT are you going to be—a wheel or a brake?

* * *

AGGRESSIVENESS is the fifth wheel of the business chariot.

* * *

KINDNESS and sincerity, not manners, are the backbone of customer intercourse.

* * *

THERE'S one hypenated person any way that we have kindliest feelings for; and that Lloyd-George.

* * *

THE PURCHASING power of the dollar is dwindling rapidly. In fact it begins to look very much like the proverbial thirty cents.

Hardware Manufacturer Succeeds Hughes

The Appointment of Hon. A. E. Kemp as Minister of Militia—Some Brief Notes on His Career—He Has Been a Remarkably Successful Business Man.

THE announcement of the appointment of the Hon. A. E. Kemp as Minister of Militia has a particular interest for the hardware trade, and his work in this exalted and highly difficult post will be closely watched. Mr. Kemp has been a member of the Dominion Cabinet without portfolio since its formation under the Premiership of Sir Robert Borden, and for the past year has been chairman of the War Purchasing Commission. He has on occasions been Acting Minister of Militia, so that his appointment to succeed Sir Sam Hughes is logical. In well-informed circles it was regarded as certain as soon as the news of Sir Sam Hughes' resignation was given out.

Hon. A. E. Kemp is one of the best known of hardware manufacturers. As president of the Kemp Mfg. Co. and later of Sheet Metal Products, Limited, Toronto, Mr. Kemp has been very closely connected with the hardware interests of the country. He has been so eminently successful as a business man that all who have known him in that capacity will expect the best results from his occupancy of the all-important position of head of our military system.

Mr. Kemp has had a distinguished parliamentary career. He was first elected to the House of Commons for East Toronto in 1900 and has sat almost continually since. His place in the Borden Cabinet, formed in 1911, was generally conceded in view of the prominent place he had won in the councils of the Conservative party. In 1895-96, Mr. Kemp was president of the Canadian Manufacturers' Association and president of the Board of Trade of Toronto in 1899 and 1900. On several occasions he went abroad as a delegate of this board.

Ottawa, Nov. 24.—The Hon. A. E. Kemp, the new Minister of Militia, took over the administration of his department on November 24, combining its work with that of the War Purchasing Commission. Until the necessary bye-election in East Toronto is over, Mr. Kemp will probably be out of town part of the time, and in that period and generally he will have the assistance of F. B. McCurdy, M.P., Parliamentary Secretary, to whom much of the routine work will be assigned.

The Hon. Albert Edward Kemp, who has been Minister without portfolio in the Borden Government since its formation, was sworn in at Rideau Hall yesterday evening. Before Sir Robert Borden went to New York last week he tendered the portfolio to Mr. Kemp, who has long been one of his most valued lieutenants. When the Premier returned, Mr. Kemp accepted it, and the necessary Order-in-Council making the appointment was passed at yesterday afternoon's Cabinet meeting.

NEW MOTOR VEHICLE LAW CAUSES STIR

Hon. Walter Mitchell's bill to practically double the revenue of the province from motor vehicles of all kinds has caused considerable of a stir in legislative circles in Quebec. Public accounts for the fiscal year ended June 30, 1915, show the revenue of the province to have been $247,081 from the motor traffic. It is estimated that if the same number of motor vehicles and trucks are run after the coming into force of this Act that the revenue will reach about half a million dollars. Such a drastic jump has caused considerable uneasiness even in staunch Liberal circles. It is felt that to charge a license of $250 per head for a ten-ton motor truck, instead of $25 per year, will have such an effect as to cripple the industry to a heavy extent. The jump for ordinary motor cars to 75 cents per h.p. is also felt to be heavy, but as automobiles of this class are held to be luxuries, little opposition to this new tax is felt, though it amounts anywhere from 75 per cent. to 100 per cent.

Much concern is also being felt that this bill is but the forerunner of other bills to raise other classes of licenses very considerably. Hotels are expected to be among the institutions which will suffer an increased license tax. Members of the Legislature anticipate that there will be automobile delegations to see the Government in regard to the increased motor licenses. The Government also intends to exact a garage license of $20 per year for each garage in Montreal, Quebec, Westmount, Outremont, Verdun, and Maisonneuve; in other cities $10, and elsewhere $5. These are not for private garages.

Much comment is also being raised over the fact that the fines for infractions of the law are to be raised, and that remissions of fines and suspensions of sentences are taken away from the power of the magistrates, and even the power of the Lieutenant-Governor-in-Council to remit fines is taken away. The bill also provides that the owner of a car, as well as the chauffeur, shall be liable for infractions of the law.

PUSH INDOOR EXERCISERS

The season for indoor exercisers is at hand and dealers should make a special effort to call attention to them. These exercisers are to be had in various and sundry styles, and dealers should be prepared to supply any style called for. A western dealer has a small room devoted exclusively to the exercisers. There are Indian clubs, dumbbells, weight exercisers, spring exercisers, chest expanders, hand grips, striking bags, etc., all put up ready for use. The dealer says that nine out of every ten men who enter this room take a poke at the striking bag. With the introduction of the improved striking bag platforms which make the exercise almost noiseless, there has come an increased demand for this class of goods.—Sporting Goods Dealer.

Doing Big Business in Furnaces

J. W. BENNETT & SONS, Gananoque, Ont., specialize to some extent in furnaces and stoves. Stoves and furnaces are not things that need replacing every month, nor yet every year. Gananoque is not a very large place, but it has a wonderfully prosperous dairy community about it, which makes it a good business centre. It used to be a stock joke to outline the things the farmer could do without. It's a dead joke now, though. Dead as Job's turkey, and that ought to be a pretty dead bird by now.

It doesn't take much cheese now to buy an automobile or a kitchen range or a first-class furnace with all the trimmings; and the farmers are buying them. Last year the firm installed 40 furnaces in the surrounding country. No more does the farmer have to crack the ice in his pitcher with a hammer. He is going in for comfort. The same firm has already accepted orders for considerably over 40 furnaces this year, with more coming in daily. That's to say nothing of stoves, that are naturally having an even heavier sale.

The farmers' trade is a trade that is worth catering to in the hardware line, and the man who handles the trade wisely is due for a rich harvest.

Russian Trade from a Russian Standpoint

The Vast Field That is Opening There for Canada—German Trade is Absolutely at an End in Russia—Characteristics of the Field That Must be Understood and Studied.

A RUSSIAN engineer now in Canada for his Government, has this to say about the prospects of Canadian trade with his country:—

Some ten years ago there was received in Russia, from the United States, a shipment of locomotives which did more harm to the prestige of American manufacturers in Russia than could be overcome by any amount of mere promises. Russia's engineers refused to accept these locomotives seriously. They thought a huge joke had been played on them. They were so far below the standard of the Russian product in design, finish and general workmanship that there could be no adequate comparison.

Russians As Engineers

The outside world is too prone to judge this nation of two hundred million people by some salient and unfavorable characteristic of a small portion of the population. The fact that the most of the people are deficient in general education does not necessarily mean that the same holds true of all classes. The reverse is true. Engineering standards are, as a whole, higher in Russia than in Canada or the United States. The most rigid rules govern the construction of all large works of a public or semi-public nature. The slightest failure to deliver the goods on the part of engineers results in the cancellation of the privilege to practise their profession. This, of course, results in a high standard of efficiency.

Better Than Canadian Climate

In this connection it seems timely to correct another misapprehension, namely, that regarding the Russian climate. Instead of being abnormally severe, it is in reality much milder than that of Canada. And Siberia, except in its most northerly parts, possesses the best climate of any part of the Empire.

Russia a Trade Ocean

However, Russia is so vast a reservoir and her ability to absorb the products of other nations is so tremendous that she cannot afford to be too critical. The entire surplus product of such a nation as Canada might be turned to her use without causing a ripple on the oceanic expanse of her trade. She is literally like an ocean in this respect and the ordinary stream of trade is swallowed up in her immensity like the waters of the largest of rivers in the ocean.

Agricultural Machinery Best

The general superiority of the Russian product, however, does not extend to agricultural machinery. In this line she is sadly lacking, both as to quality and quantity. This happens to dovetail with the fact that Canada excels most in this line. Hence, this presents the greatest opportunity to the Canadian manufacturer. Other necessities have been developed in Russia; this one has been neglected. This is all the more strange in view of the fact that 80 per cent. of our two hundred millions are farmers. So, in addition to the fact that the Canadian product excels the Russian, there is also the presence of a demand for it that will have no end for many years to come. Particularly is this true of steam plows and tractors, which are so little used in Russia at present, although the large area of her wheat fields seems to require them.

German At $3,000 a Word

So deep is the distrust of all things German in Russia to-day that the utterance of a single word of that hated language results in a fine of $3,000 or an equivalent in imprisonment. This is symptomatic of the state of public feeling. Not in our time will German trade be tolerated in Russia. Other nations will, after this war, be able to profit by this fact even at the expense of the Russians themselves. The Slavs are primitive and elemental in the exercise of their emotions and they are willing to nourish this hate at the expense of their pockets to a degree that is inconceivable to the calmer Anglo-Saxon mind. Under no circumstances will Russia buy in Germany. And she must buy some place.

German Service

None the less, it is to the Germans that Canadians must turn for instruction in the art of serving Russian needs. The Germans excel in the art of service. It is the backbone of their foreign trade, and too much emphasis cannot be placed on the value of such service.

In their trade relations they did the most obvious and necessary things. For instance, enquiries were invariably answered promptly and in detail, and were followed up by valuable suggestions. Blue prints accompanied catalogues and letters accompanied both, giving necessary explanations. Strange as it may seem, this is something that no other country than Germany did in its trade relations with Russia before the war. And it must be done. The goods were invariably shipped promptly upon request, without the tedious delays attendant upon so much of international trade. The Germans never waited for the money first. Another thing. An enquiry to a German firm always resulted in the assurance that they welcomed the requests for advice and information even though we did not buy. They cultivated courtesy to the n'th degree and made it pay. Also, to the everlasting credit of German merchants, be it said that they never deceived their Russian customers. Goods were always up to specifications.

The Russian Merchant

Equally, the Russian merchant stands in a class by himself in so far as his ethics go. If he contracts for goods, he will pay for them. His word is literally his bond.

In this connection, too much importance must not be placed on the barrier of language. The English language will suffice for commercial intercourse. Russians excel as linguists and the study of the Russian language presents an almost insurmountable barrier to foreigners. So true is this that in our universities it is in the study of the Russian language that the greater number of failures are recorded on the part of students. In other words, Russian as a language is so difficult that Russians themselves are frequently better acquainted with some other language than their own.

The General Field

There are, of course, other fields open to development other than that of agricultural implements. But the opportunity is not so great. Russia possesses a vast system of factories of her own which are devoted to most of the other industries, and what she lacks is supplied by other countries which are possibly better qualified than Canada to care for such trade. Thus, clothing come from England, as do tools and dentists' supplies. The best of the latter formerly came from Germany and the cheapest from the United States. All steel working machinery came from Germany and this deficiency offers the next best opportunity to that in agricultural implements. Russia herself produces a large quatity of such machinery, but the quality is invariably poor.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

THE outstanding feature in hardware lines during the past week has been the advance of 20c per gallon in all mixed paints, for both colors and white. This is a condition that has been referred to repeatedly in HARDWARE AND METAL for several weeks past as likely to come about. Advances in linseed oil and the high cost of other materials that enter into paints has been responsible for the increase. Advances have also gone into effect on varnishes and painters' sundries. White lead in oil as yet has not advanced, but there is a firmness in this market and advances are anticipated.

There have been numerous price changes during the week, all in the upward direction. Turpentine, wire nails, wire, American ammunition, black wire cloth, galvanized poultry netting, wood screws, tire bolts, stove bolts, iron rivets and burrs, wrenches, boxwood rules, steel squares, poultry netting staples, cordage, sisal clothes lines, Potts and asbestos sad irons, cow ties, shellac, charroal, waste and valves. There is a firmness in all iron and steel products and further advances can be looked for.

MONTREAL MARKETS

MONTREAL, Nov. 28th.—The outlook in all lines of the market for hardware and metals this week is even more definitely towards higher prices and greater scarcity of products than before. Men of experience in the business are nonplussed when it comes to making predictions. Huge increases in price in many lines are noted, but the cry is still they come. Wire shows great increases again this week, and all lines of shelf goods are being steadily increased. Iron and steel products especially are so scarce as to be fetching almost any price, the users who need them anxious only about delivery. Yet business is still reported exceedingly good, and trade in gift goods against Xmas. is said to be especially good at present in Montreal wholesale hardware circles. Hardware retailers who handle paints are specially advised to look at the paint market reports this week as paint prices are on the up grade as predicted in HARDWARE AND METAL lately.

Steel Buyers Ask Delivery Only

IRON AND STEEL.—There is no relaxation of the tremendously firm conditions of the iron and steel market generally. Deliveries are by far the most important matter. People are anxious to get the products required and willing to pay apparently almost any price asked in order to get these commodities. But deliveries are beyond question difficult. It is next door to impossible to secure some lines at all. Plates are particularly scarce, and there is going to be a scarcity of pipe, and indeed of almost all lines of manufactured iron and steel. The prices tell the tale, and the tendency is still towards advances, some prominent and reliable minds on the markets even prepared to look for vast advances. There is a great scarcity of tinned iron, tinned sheets and small tin plates. All sheet metal is being jealously held at present prices further increases being imminent.

Wire Nails Up Again

Though wire nails increased in price only a week ago, another change has come into effect, and present prices are quoted as follows: f.o.b. Montreal, Ganaoque, Collingwood, Owen Sound, $4.40 base; f.o.b. Toronto, Hamilton, Milton, London, $4.35 base; f.o.b. Sault Pt. Arthur, and Ft. William, $4.50 base; f.o.b. St. John, N.B. and Sidney, N.S., $4.40 base.

Sad Irons Increased

Mrs Potts sad irons are increased in price again the base No. 55 being quoted at $1.05 and No. 50 at $1.15 per set.

Rivets Increased Also

The discount on small rivets, including coppered rivets, is altered to 30 off. It used to be 35 off.

Stove and Tire Bolts Too

Stove bolts are now 55 off, and tire bolts have had their price increased to 40 off.

Galvanized Iron Sheets Up.

A shading upwards in prices of galvanized iron sheets is noted in the following list: Apollo galvanized iron sheets. 16 gauge $5.95, 18-20 gauge, $6.05, 21-24 gauge $6.15, 26 gauge $6.40 28 gauge, $6.05, and 10¾ oz. $6.90.

Wire, Plain and Galvanized, Up

WIRE, BARBED AND PLAIN.—A great many changes in price are recorded this week in wire both barbed and plain, and galvanized. Here are the latest prices on galvanized wire.

Galvanized Wire Goes Up

Galvanized wire Nos. 4 and 5 per 100 lbs. now costs $5.75; Nos. 6 and 8 cost $5.70; No. 9 is $5.25, No. 10, $5.75; No. 11, $5.80 (some firms ask $5.90); No. 12, $5.40; No. 13, $5.50; No. 14, $6.10 (some firms ask $6.20); No. 15, $6.50 (with some quotations at $6.60) and No. 16, $6.80 (with some firms quoting $6.70).

Barbed and Plain Twist

Barbed and plain twist wire are also up. Barbed wire is now $5.25 per 100 lbs., and plain twist is $5.85.

Coil Spring Wire Also

New prices on coil spring wire are No. 9, $5.30, and for No. 12, $5.45 with further firmness in sight.

Iron and Steel Wire Up

The changes in all lines of iron and steel wire this week are calculated upon the figure $4.70 per 100 lbs. base price.

Hay Baling Wire Up

Hay baling wire partakes of the general increase. No. 13 is now $4.60, No. 14 is $4.65, and No. 15 is priced at $4.75.

Cut Hay Wire Increased

Cut hay wire shows the following increased prices: No. 9, $4.55; No. 10, $4.60; No. 11, $4.70; No. 12, $4.80; No. 13, $4.80; No. 13½, $4.90; No. 14, $5.05; No. 15, $5.30. All these prices are plus 7½ per cent.

Bale Ties Also Up

Single loop bale ties show increased

prices also. No. 12 is quoted at $5.00; No. 13 at $5.10; No. 13½ at $5.15; No. 14, at $5.25; No. 15, at $5.45; and No. 16, at $5.70 net.

Fence Staples Increased

Bright fence staples are increased in price to $4.55 per 100 lbs., and galvanized fence staples are now priced $5.40 per 100 lbs.

Copper Wire 10 Per Cent. Up

Copper wire shows a ten per cent. increase this week also, and the market for the metal is so firm that further increases may occur.

New Wire List Discount

The trade discount allowed on the new list of bright and brass wire goods published in HARDWARE AND METAL last week is 82½ per cent. The new list is operative now in Montreal.

Wire Cloth Increased

Black wire cloth and green are increased to $2.75 per 100 feet, and there is a coming scarcity and increase of price predicted by the trade.

Shelf Goods Show Many Increases

SHELF GOODS.—To enumerate all the small lines of shelf goods which have experienced increases in price lately would take a volume about the size of the family Bible, and large wholesalers of hardware are only hoping that the smaller retailers have the wisdom and foresight not to sell the lines they bought months ago at certain low prices, at the same old rate of profit as served sufficiently well months ago. They will have trouble in replacing some lines at price and a half as compared with the old prices paid.

Butts Have Gone Up

Butts have increased in price this week Narrow No. 800 being now 20 and 5 off, 838, 25 off, 804, 30 and 5 off, 840, 25 off, 802, 30 off, 810, 15 and 5 off, 814, 15 and 5 off, 820, 30 off, 842, 30 off, 844, 30 off, and 910, 30 off.

Heavy Straps and T. Hinges Up

Heavy straps and T. hinges are now quoted at 30 and 5 off which marks a further increase since the latest rise in price.

Light Strap and T. Hinges Also

The same figures apply also to light strap and T hinges which have gone up in price in the same ratio as the heavies. Hinge hasps No. 67 are now 30 off, and blind butts No. 844 are 30 off also.

Wood Screws Are All Up

Wood screws both bright and brass, flat and round heads are all up in price this week. Flat head brightware 75 off. Round head bright 70 off. Flat head brass 42½ off. Round head brass 40 off.

Stanley Rules Up

Stanley rules are up in all lines by a ten per cent. advance over all .

Carpet Tacks Go Up

Even carpet tacks have taken a jump in price. Quite a considerable rise is noted in double pointed carpet tacks, the discount on these being now 65 and 10, instead of 80 and 10.

Sand Paper Goes Up

A 15 per cent. increase is recorded in sandpaper which has been steadily increasing of late.

Horse Clippers Up

New market horse clippers are up in price to $1.65. They used to be $1.45, and this is a line which will see further increase in opinion of the trade.

Taylor Forbes Goods Up

All lines of Taylor Forbes Goods from Guelph show various increases in price, and retailers should not sell at former prices.

Ammunition Increased

A considerable increase is noted in new lists of Winchester ammunition.

Craft Paper Up

Craft paper is now 12 cents a pound keeping in line with the general increase of paper materials.

Rope Shows Increase

Increased in price only the other week, cordage shows a further increase this week, the following new base prices being quoted. Pure Manila 23½ cents; British manila 19 cents; sisal 17 cents, and lath yarn 17 cents. These are all one cent a pound up in price.

Ingot Metals Keep in Firm Market

INGOT METALS.—The metals this week, all show the great firming tendency, while prices may not be absolutely altered upwards in every case.

Copper Still Strong

Copper is still in very strong market though at prices as quoted last week viz.: $39.50-$40.00.

Lead Higher

Lead is higher priced, strong and scarce. The prices quoted are $10.00 and $10.25. Lead wool is now 12 cents a pound.

Tin As Last Week

Tin prices are as quoted last week $49.50-$50, and the market keeps strong. The other metals, antimony, spelter, and sheet zinc are all as quoted last week. Tinsmith's and wiping solders show no change since last week's increase to 31 cents and 29 cents respectively.

TORONTO MARKETS

TORONTO, DEC. 1.—Business in all hardware lines has been very good during the week. Freight shipments continue to be a perplexing problem, but both shippers and receivers of goods are beginning to take it as a necessary condition of things in view of the shortage of labor. Collections have also been good. Leading wholesale hardware men state they believe there will be a changed method of doing business in the matter of credit when business again settles into normal channels after the war. They assert that the extension of

credit has been too lax and that manufacturers have been drawing in their lines in many instances from 30 days to 10 days. They can see no reason why discounts should be given for cash in thirty or ninety days. These periods, they point out, have been too long. It has resulted in credit being given to the farmer and others where there was really no need for it if he was only given to understand that he could not have credit.

Wire Nails Have Again Moved Upward

NAILS.—With each advance in wire nails new high records are being established. Upward movements in wire nails have apparently become a weekly habit, judging by the frequency with which they have come. Another advance of 15c. per 100 pounds was put into effect during the week, which now makes the base price $4.35 per keg at Toronto, London, Hamilton and Milton. Cut nails have not advanced in price. There is a firmness in the market for all wire products and wire nails have followed upward in sympathy.

Wire Products Have All Gone Up 15c Per 100

WIRE.—An advance of 15c. per hundred pounds in all wire products was put into effect during the week. This will affect cut hay baling wire, which is now selling at $4.40 Nos. 9 and 10, $4.55 for No. 11, $4.65 for Nos. 12 and 13, $4.75 for No. 13½, $5.10 for No. 14, $5.15 for No. 15, with an addition 7½ per cent. added to these prices. Hay wire in coils under the new schedule is quoted at $4.60 for No. 13, $4.65 for No. 14, $4.75 for No. 15. Smooth steel wire in Nos. 0-9 is now sold at $4.70 base with the usual extras for other gauges. Wire bale ties are also affected by the advance and the following prices prevail: No. 12, $5; No. 13, $5.10; No. 13½, $5.15; No. 14, $5.25; No. 15, $5.45; No. 16, $5.70.

New Sale Prices on Ammunition Out

AMMUNITION. — Manufacturers of all the American brands of metallic ammunition have announced their new scale of prices, which provides for a considerable advance on almost all lines. Prices were recently withdrawn and this was taken as a precursor of new and higher prices. The complete list will be found elsewhere in this issue in panel form. The list applies to both Winchester and Remington Arms-Union Metallic Companies.

Galvanized Poultry Netting and Black Wire Cloth Up

POULTRY NETTING.—As predicted in HARDWARE AND METAL last week new and higher prices were to be expected in the near future on galvanized poultry netting and black wire cloth. Manufacturers recently announced the withdrawal of their prices on poultry netting, and this advance has been anticipated in these columns for some weeks past. The new discount on the Canadian mesh is 27½ per cent. as compared with 30 and 10 per cent. formerly. The American mesh now carries a discount of 20 per cent. as compared with 30 per cent. formerly. These prices are for Toronto, Montreal and London.

Black wire cloth has advanced 25c. per roll and is now selling at $2.75 per 100 square feet in 100-ft. rolls and $2.80 per 100 square feet in 50-ft. rolls.

Wood Screws Advance 10 Per Cent. in Price

SCREWS.—All wood screws have been advanced during the week approximately 10 per cent. Flathead bright screws are now quoted 75 per cent. off list where formerly the discount was 77½ per cent. Oval head bright are now 70 per cent. off list, where the discount formerly was 72½ per cent. Round head bright carry the same discount as oval head bright. Flathead brass now carry a discount of 42½ per cent. as compared with 45 per cent. formerly. Oval head brass and round head brass are now quoted at 40 per cent. off list whereas the former discount was 42½ per cent. Flat head bronze is now 35 per cent. off list as compared with 37½ per cent. formerly. Oval head and round head bronze are quoted at 32½ per cent. off list where formely the discount was 35 per cent. The f.o.b. points are Hamilton, Toronto and Montreal, with freight equalized thereon. Orders are only accepted with specifications and for prompt shipment. The new discounts went into effect on November 28.

Tire Bolts and Stove Bolts Go Up

BOLTS. — An advance in the selling price of tire bolts and stove bolts has been put into effect during the week. This follows the recent advance in bolts and nuts announced in HARDWARE AND METAL two weeks ago. Tire bolts are now selling at a discount of 40 per cent. as compared with the former discount of 45 per cent. Stove bolts are quoted at 55 per cent. off list, whereas the former discount was 55 per cent.

Boxwood Rules Move Upward 10 Per Cent.

RULES. — An advance has been recorded in the price of all the various makes of boxwood rules of the Stanley Rule and Level Company. The increase amounts to 10 per cent. The lines covered by this advance are numerous. The higher cost of brass and other materials together with the labor question is given as the reason.

Wrenches and Steel Squares Go Upward

WRENCHES. — Manufacturers have advanced the price of all the various makes of wrenches approximately 15 per cent. Wholesalers have accordingly marked up their prices in a corresponding degree. Steel squares is another one of the lines of steel goods that have recorded upward movements during the week. In the No. 14 size the selling price under the new schedule is $12.60 per dozen. Other sizes have advanced correspondingly.

Iron Rivets and Burrs Go Still Higher

RIVETS AND BURRS. — Following the advance recorded in iron rivets and burrs last week another advance has gone into effect during the past week. This change affects tinned and coppered rivets, coopers' rivets and carriage rivets. The new discount is now 30 per cent. Last week the discount was marked down from 35 per cent. to 32½ per cent. There is a firmness in the market in harmony with all iron and steel products and further advances would not come as a surprise.

Another Big Advance in Poultry Netting Staples

STAPLES.—In sympathy with the advance in wire nails and all wire products the price of galvanized and bright poultry netting staples have again registered a considerable advance during the week. Where formerly the discount was 30 and 5 per cent. it is now 20 and 5 per cent., off the list price of $12 per keg. Bright are quoted at $1.10 less than galvanized after the discounts are deducted. Extras apply as formerly, as follows: 50-lb. boxes, 30c. per 100 lbs. advance; 25-lb. boxes, 40c. per 100 lbs. advance; 10-lb. boxes, 80c. per 100 lbs. advance. Tacks are another line which is in very firm market and an advance is looked for in this commodity in the near future.

Sink Bolts and Skate Screws Higher

BOLTS AND SCREWS.—An advance of approximately 12 per cent. has been put into effect on sink bolts. The new discount on these goods is now 55 per cent. as compared with 60 per cent. heretofore. Skate screws are also among the lines to register an advance during the week of 2½c. per carton. They formerly sold for 47½c. per carton. The new price is 50c. per carton.

Globe, Angle, Check and Radiator Valves Are Up

VALVES.—Advances have been recorded in selling price of globe, angle,

and check valves in both the standard and high grade. In the instance of the standard, the new discount is 30 per cent., as compared with 35 at recent quotations, and 25 per cent. for high-grade, as compared with 30 per cent. formerly. In the standard radiator valves there has also been an advance, the new discount being 40 per cent., as compared with 45 per cent. formerly. In the high-grade radiator valves the new discount is 30 per cent., whereas the former discount was 35 per cent. Patent quick opening valves have advanced in price by reducing the discount from 65 per cent. off list to 60 per cent. off list. There has been a good demand within recent weeks for steam fittings, which would seem to indicate that industrial development of various kinds is keeping up. Indications seem to point to steady prices, with a tendency to firmness. Further advances are not considered improbable in the face of market conditions. Experienced mechanics continue to be a scarce commodity, and this is adding to the difficulties of valve makers.

Wiping Solder and Bar Solder Go Up

LEAD AND SOLDER. — There has been an advance in wiping solder from 2c. to 3c. per pound since our recent quotation. Wiping solder is now quoted at 25¾c. to 29¾c., as compared with 23¾c. to 26½c. formerly. Bar solder has also recorded an advance, the price being the same as for wiping solder. On commercial bar solder the price is 25¾c. and on guaranteed 29¾c. per pound. Lead sheets hold at the same quotations as given in our recent issue. Lead wool is quoted at 7½c. per pound.

Waste Goes Up From 1c to 4c Per Pound

WASTE.—An advance in all classes of waste, ranging from 1c. to 4c. per pound in certain instances went into effect during the week. Polishing waste has advanced 2c. per pound and white wiping waste 1c. per pound on all the various grades. Colored wiping has advanced from 1c. to 1½c. per pound. Wool packing waste has made the greatest increase, the first quality of this article now being quoted 4c. per pound over the previous quotations. The lower grades of this waste have advanced 1c. and 2c. per pound. White washed cotton wipers is the only line that has not advanced, that line being still quoted at 12c. Mixed colored and dark colored have in each instance advanced 1c. per pound. The advance has been caused through the firmness and advancing prices in the raw cotton market. Raw cotton is now being quoted dangerously near 21c. per pound and has been hovering in that neighborhood for some time past. Manufacturers of waste report a big demand for the product, some factories being sold up to their capacity. The new prices will be found in current quotations.

All Cordage Products Advance 1c Per Pound

CORDAGE. — An advance of 1c. per pound was recorded in all ropes during the week. This came as somewhat of a surprise to the trade in view of the fact that manufacturers had started to book for spring delivery about a week previous to the increase in prices. Cordage men assert that it has never happened before within their recollection that the price of cordage moved either upward or downward so soon after orders for spring business were being booked. Orders were fairly heavy in bookings for spring delivery in the week that travellers were on the road and those who got in at the lower price consider it a lucky stroke of good fortune. Pure Manila rope is now quoted on a basis of 23½c. per pound for

⅝ inch diameter and larger. British Manila is quoted on a basis of 19c. per pound. New Zealand hemp rope is also quoted at 19c. per pound. Sisal rope is quoted at 17c. per pound for ⅝ inch basis and larger. Sisal lath yarn is also quoted up 1c. per pound on a basis of 17c. Hemp ropes remain unchanged on the basis of the recent advances recorded in that article. At the present time the market for all sisal products is firm and further advances are looked for in articles made therefrom. Business in cordage has been exceptionally good so far this fall. Sisal clothes lines is another line that has been advanced to the wholesale trade, the increase amounting to 10 per cent. The reason for the advance in cordage products is given as an advance in fibre products.

Demand for Stoves Has Been Tremendous

STOVES. — Manufacturers of stoves report the demand for their products as exceptionally heavy this fall. It is so heavy that they are unable to meet it in the face of the difficulty in getting experienced help at the foundries. Orders now on the books of some companies are stated to be the heaviest on record. They are even heavier than the year 1913, which previously held the record of being the banner year so far as a big trade went. Prices on all lines of stoves are up 15 per cent. to 20 per cent. over pre-war prices. Stocks on heaters in the manufacturers' hands are low at the present time and it is expected that a cold snap would cause a heavy run on this class of stove. Business was never better with the stove founders. The big trouble is to get the help and raw materials with which to turn out the goods.

Frame Pulleys up 5c.

Frame or axle pulleys have advanced 5c. each during the week. They are now selling at 45c. as compared with 40c. formerly.

Chesterman's Tapes Up

An advance of 10 per cent. has been put into effect on Chesterman's measuring tapes. In the 1840 tape. 100-foot, the price is now $7.45 per dozen.

Metal Prices Hold Firm; Demand Continues

Copper continues to be the leading feature of the metal markets, and there is likely to be a scarcity of this metal next year. Lead with spelter are showing greater activity, the latter having advanced slightly, while higher prices for lead appear probable. Tin continues firm, but unchanged, while antimony and aluminum are also in better demand. The situation for all metals looks brighter, and all prices show a firmer tendency. Business locally continues brisk, and the outlook is favorable for the future.

COPPER. — The market continues strong and quotations have advanced locally, although the primary market is unchanged. As nearly all of the production of many companies, which they are willing to sell in advance, has been disposed of until the third quarter of 1917, it is believed probable that prices will go far above the present level. Every effort is being made to increase the output of the metal, but unless some of the companies now in the prospect stage find large amounts of the metal, it is considered improbable that the output will be large enough to take care of any but the most urgent buyers next year, outside, of course, of those who have already contracted for their needs. Prices locally range from 37½c to 39c.

TIN.—The market is firm and steady. The New York market continues firm, due to a shrinkage in stocks and an active demand, while the amount of tin coming in has decreased. The situation in the tin market is such that higher prices may be looked for. Local quotations are unchanged at 48c per pound.

SPELTER.—The demand for this metal continues more active, particularly for brass special spelter, and the market is holding firm, with quotations up ½c per pound. Local price, 14½c to 15c per pound.

LEAD.—While the "Trust" is holding the price of lead at 7c New York, independent producers have raised their quotations to 7.20c New York for spot metal. Local quotations firm and unchanged at 9¼c per pound.

ANTIMONY.—There has recently been a more active demand for antimony and the market is firm. Local price, 18c per pound.

ALUMINUM.—The market is firmer, due to an improved demand and a scarcity of spot and nearby metal. Aluminum is quoted locally at 68c per pound.

Pumps Advance 10% Repairs Unchanged

PUMPS.—Pump manufacturers have advanced their prices on pumps 10%. Pump repairs and pump leathers are not included in the above owing to advances made recently on these lines.

LONDON MARKETS

LONDON, Dec. 1.—Business in this district continues to be exceptionally good. All seasonable lines are in good demand. The Christmas trade has now started in well and stores are busy making preparations for a still larger trade later on as the season approaches the holiday. Many merchants are already dressing their windows with special Christmas goods. During the week the price movements have been generally upward. Turpentine has made substantial gains during the week. White lead in oil holds firm in price. Advances in all mixed paints are in order coincident with the announcement of higher prices by the paint companies. Wire nails and all wire products have advanced again. Fence wire is holding firm at present prices. Many of the hardware stores are handling wooden toys this year. The variety is good and prices are attractive. Sad irons have advanced still further. Shellac has increased in price 10 per cent. Iron rivets and burrs register a still further increase. Rope has had a general advance of 1c per pound. All seasonable lines are firm in price and are selling well. Skates, sleighs, sleigh bells, snow shovels and kindred lines were in good demand last week. Advances have also been recorded in wood screws, stove bolts, tire bolts and iron rivets and burrs. Collections have been good during the week.

Wire Nails and Wire Products All Up

NAILS AND WIRE.—An advance of 15c per 100 pounds has gone into effect during the week on wire nails, which now makes the base price $4.35 per 100 pounds. All wire products, such as staples, fence hooks and O. and A. wire, followed upward in sympathy with the firmness in the wire market. The advance on these products is also 15c per 100 pounds.

Linseed Oil Holds Firm

LINSEED OIL.—Although there has been an uncertainty in the market for linseed oil owing to the fluctuations in the seed market, still prices quoted last week have held firm. Under the present conditions the sale is light. Raw linseed oil in 1 to 2-barrel lots is selling at $1.20 per gallon and boiled at $1.23. In 3 to 5-barrel lots the price quoted is $1.19 for raw and $1.22 for boiled. For 6 to 9-barrel lots the quotations are $1.17 for raw and $1.20 for boiled.

Turpentine Advances 5c Per Imperial Gallon

TURPENTINE.—There has been a firmness in the turpentine market during the week, due to conditions in the primary centres in the Southern United States. An advance of 5c per gallon has been made during the week. In barrel lots the price quoted now is 79c per Imperial gallon, 78c in 2 to 4-barrel lots, and 86c in small lots of 5 gallons. Demand for the commodity has been fair.

White Lead in Oil Firm

WHITE LEAD IN OIL.—Although no price changes have been recorded in the price of white lead in oil, the market is firm at present quotations. There has been a light sale. In small lots it is quoted at $14.25 per 100 pounds and in ton lots at $13.95 per 100 pounds.

Putty Firm

PUTTY.—The price of putty holds firm at recent quotations of $3.70 per 100 pounds in 100-lb. drums and $3.80 per 100 pounds in 25-lb. drums for the pure. Standard putty is quoted at $3 in 100-lb. drums and $3.10 in 25-lb. drums.

Wooden Toys Being Handled This Year

TOYS.—Many retail hardware merchants are handling wooden toys for the first time this year in preparation for the Christmas trade. The variety of the lines carried is quite extensive and the prices are at attractive figures. These are all made-in-Canada toys, and the merchants are deserving of support in their efforts to place these articles before the public.

Sad Irons Again Record an Advance

SAD IRONS.—Another advance following that recently announced has gone into effect on the Potts and asbestos sad irons. The new prices for these are now as follows:—Potts N.P. No. 50, $1.20 per set; Potts plain No. 55, $1.05 per set; Asbestos No. 70, $1.75 per set; Dover No. 60, $1.10 per set.

Cow Ties and Stall Fixtures Up

The discount on cow ties has been changed to 32½ per cent., which provides for an increase in these articles. Stall fixtures have also advanced. The new price on the latter is 95c per dozen.

Shellac Advances 10 Per Cent.; Gum High

SHELLAC.—An advance of 10 per cent. has been made on both orange and white shellac during the week. The advance has been occasioned by the firmness in the shellac gum market, which is now at high levels and difficult to obtain owing to the shipping situation from India. Following are the quotations:—Orange—1 gal., $2.55 gal.; ½-gal., $2.75 gal.; ¼-gal., $2.90 gal.; pints, $5 doz.; ½-pint, $3 doz.; ¼-pint, $1.90 doz.; 2-oz. bottles, $1.05 doz. White—1 gal., $2.75 gal.; ½-gal., $2.90 gal.; ¼-gal., $3 gal.; pints, $5.50 doz.; ½-pint, $3.40 doz.; ¼-pint, $2.25 doz.; 2-oz. bottles, $1.15 doz.

Charcoal Advances

An advance in the price of charcoal has gone into effect. Paper bags are now selling at $1.20 per dozen, and 5-bushel sacks at 22c per bushel.

New Discounts on Rivets and Burrs

A further increase in the price of iron rivets has been made. The discount is now 30 per cent. instead of 32½ per cent. This decline follows a decline of a similar amount made last week.

Poultry Netting Advances

The new discounts are now out for galvanized poultry netting. On the Canadian mesh the quotations are 27½ per cent. off list and 20 per cent. on Canadian mesh. This provides for a substantial increase, as the former discount on Canadian was 30 and 10 per cent.

Glass Prices Firm

Sales of glass have been fairly good during the past week. Prices are holding firm at recent discounts of 20 per cent. for both single and double diamond and 50 and 5 per cent. on cut lights.

All Rope Products Up 1c Per Pound

ROPE.—An advance of 1c per pound has been announced on all ropes. Pure

Manila is now quoted on a basis of 23½c per ⅝ inch and larger; British Manila on a basis of 19c per pound; African hemp at 19c per pound base; and sisal lath yarn at 17c, with sisal rope at 17c also for base sizes of ⅝ inch and larger. There is a firmness in all sisal products, and manufacturers would not be surprised to see the raw fibre market go higher, and thus necessitate higher prices for sisal products.

Wood Screws Have Been Marked Up

SCREWS.—All wood screws have been advanced approximately 10 per cent., according to the new discount lists that have been issued. New discounts will be found in a panel elsewhere. Stove bolts have also recorded an advance, the new discount being 55 per cent. off list. Tire bolts have also advanced, the new discount being 40 per cent.

WINNIPEG MARKETS

WINNIPEG, Nov. 30.—Conditions in the various markets still continue strong with the tendency on all lines of steel and wire products to advance to further high levels. Another week of activity is to be noted in the latest prices issued on bolts and nuts, wire nails, wrought iron pipe and buck saws. These four are perhaps the most important lines affected but latest advices indicate further advances in all lines of butts and hinges, barrel and tower bolts, screw eyes and various other lines of bright wire goods. The new prices are not available at time of writing but should be included in next week's report.

New High Price for Linseed Oil

There has been considerable activity during the past week in linseed oil and following a decline of 3c per gallon. barley in the week comes an advance of 7c making to-day's figures the highest recorded in years. Best quotations now available are noted herewith:

Raw .... $1.40 per gal., bbl lots
Boiled .. $1.43 per gal., bbl. lots

No change has yet been made in the price of turpentine, quotations being firm at 80c per gal. bbl. lots.

Hand Saws Higher

For some time past, jobbers have been anticipating a big advance in the price applying to buck saws. All lines of hand saws have undergone decided increases during the past year. So the new prices issued will not come as any great surprise. Quotations now being made are on the following basis:

Prince Rupert, $9.25 per doz.; watch spring $7.25 per doz.; happy medium, $7.00 per doz.; new century, $9.25 per doz.

New prices issued on cross cut saws, also show a big increase as the quotations noted below on the "common" tooth will indicate: Common cross cut saws—One man .40c ft. all sizes; Two man .40c ft., all sizes.

Pipe Stocks and Dies Up

Jobbers advise that all of Butterfields' line of pipe stocks and dies, blacksmiths' stocks and dies, Reece screw plates, pipe taps, taper taps etc., are also undergoing an upward change approximately 10 per cent. higher than former figures.

Bolt and Nut Discounts

The latest prices issued on bolts and nuts certainly show the tendency of quotations being issued from time to time. Perhaps no items in the hardware trade have shown steadier advancement than these items and the situation has developed to such an extent that to-day it is not so much a question of price as getting delivery of the goods. This applies particularly to bolts, on which the situation is to some extent acute with no prospects of immediate betterment. Discounts now available on bolts are as follows:—

Carriage bolts, ⅜ and smaller 20 per cent.; 7-16 and larger 5 per cent.; Machine bolts, ⅜ and smaller, 20 per cent.; 7-16 and larger 10 per cent.; Plow bolts, 10 per cent.; Sleigh shoe bolts, ⅜ and smaller, 10 per cent.; 7-16 and larger, 5 per cent. Lag screws, 30 per cent.

Included herewith are also given net prices on a few of the best selling lines of square and Hexagon tapped nuts, which speak for themselves with regard to this line.

Square tapped nuts, less than cases, per 100 lbs.—¼ $17.00; 5-16, $15.00; ⅜, $13.10; 7-16, $12.10; ½, $11.80; ⅝, $11.30; ¾, $11.00; Hexagon Tapped Nuts, 5-16, $20.00; ⅜, $16.60; 7-16, $14.70; ½, $14.35; ⅝, $13.30; ¾, $12.75.

Further Advances in Pipe

Following last week's announcement of an advance in wrought iron pipe, to-day's further advances come somewhat of a surprise, if surprises can be said to exist now with conditions in such an uncertain state. To-day's quotations as noted below are about 2½ per cent. over last week's figures:

Wrought pipe black—¼, $4.01; ⅜, $4.10; ½, $5.27; ¾, $6.44; 1, $9.54; 1¼, $12.78; 1½, $15.39; 2, $20.75. Galvanized—⅜, $6.57; ½, $7.11; ¾, $8.87; 1, $13.14; 1¼, $17.73; 1½, $21.20; 2, $28.53.

The last change on wire nails brings home more than ever the conviction which has been growing for some time past, that 5 or 10 cents worth of nails is not going to do all the odd jobs around the house as it used to do. The writer can remember when it was a very good assortment of nails that sold for 10 cents but this line is now attaining a figure which almost might be termed a luxury. Another advance of 10 cents per keg during the past week reveals these figures as the best obtainable:

Wire nails, Ft. William, $4.25; Winnipeg, $4.65 per keg base.

Wrapping Paper Higher

Kraft wrapping paper is again in the limelight this week and the tendency as noted previously is still upward. The paper situation does not improve and is quite well known to all our readers who have read previous articles we have issued, and it is also being brought to everyone's notice through the daily press. The best price being made to-day on Kraft paper is 11c per lb., just one hundred per cent. advance in the last few months.

Stove Pipe Prices

We mentioned some lines of stove pipe as having advanced last week and supplementing this list are to be noted, the following per 100 lengths:—

Riveted pipe 6 in., $12.75; 7 in., $13.75. Ready to rivet, 6 in., $12.75; 7 in., $13.75; Taper pipes, 6 in., $2.85; 7 in., $2.85; Tee pipes, 6 in., $4.75; 7 in., $4.75.

Other lines to be noted are as follows:—Cap screws, 30 per cent. discount; Set screws, 35 per cent. discount; Sweat pads, $5.70 to $6.00 doz.; Galvanized pump rod, 7-16, $7.35 per 100 lbs.; Tank pumps, $7.00 each; Safety hasps, 915-3 in., $1.15 doz, ;4½ ins., $1.50 doz.; 6 in., $2.40 doz.

ORDERS AMOUNT TO $26,000,000

Since the commencement of operations in May, 1915, the War Office Service, conducted by the C.P.R. purchasing department under the direction of Edward Fitzgerald, has placed orders in Canada amounting to $26,000,000. The list of supplies bought is quite varied. Listed under five headings, the commodities and their values are as follows:—Cotton and woolen goods, $2,550,000; foodstuffs, $16.200,000; sugar, $2,600,000; miscellaneous manufactures of iron and steel, $2,400,000; miscellaneous supplies, $2,250,000.

LETTERS TO THE EDITOR

These columns are open to contributions upon any topic of interest to the trade, it being understood that the views expressed are those of the contributors, and do not necessarily imply editorial indorsement. Names of contributors will be withheld, if desired, but name of writer must accompany correspondence as an evidence of good faith.

The following letter has been received from a Western Canada representative of a large stove manufacturing company. The letter suggests a remedy for overcoming the ever-growing competition of the mail order houses. The views expressed are those of the Westerner.

HARDWARE AND METAL readers are invited to send in their views regarding this important matter:

To Editor Hardware and Metal.

Have just been reading article in your last issue of H. and M. re "Stove makers taking smaller profits." We think we are correct in assuming that stove prices are being held down at the present time by mail order houses, also that at the present time some at least of these mail order houses are selling stoves at cost, and at less than cost, to keep faith with the many readers of the "Homesteaders' Bible" in these Western provinces. It seems to be the opinion of at least some of the Eastern stove makers that there is likely to be more or less of a stove famine in Canada in 1917. Such being the case, there would not seem to be much need to worry about the disposition of any output for the next year or two, but "preparedness" being a much used word at the present time, it would seem as if it might be wisdom to give some consideration to what is likely to happen when this war is over, conditions normal and our factories not being called upon to produce munitions of war. Stove makers will have more goods to sell than at present, and doubtless the mail order houses will be still in evidence, if not more so. There is no possible doubt about its being a fact that mail order houses at this time are securing a large proportion of the stove trade west of the Great Lakes and getting a firmer grip in this business as time goes on, due entirely to the fact that they find it possible to make such interesting prices as the retailer cannot compete with except at a loss. It is our understanding that some of the larger mail order houses manufacture in their own factories many of the lines they handle; that these plants are not being run with any idea of paying dividends, but considered quite satisfactory if they make even, the entire output being turned over to mail order branches at the net f.o.b. factory costs, any profiteering to be done by the latter. Stove manufacturers could, we think, successfully meet this competition if they would get together and enter into an agreement, so far at least as the Western provinces are concerned, something along the following lines:—Appoint a competent committee to select such lines of stoves and ranges made by each manufacturer as have been found particularly adapted to this Western trade; decide on the quantity of each line that could probably be disposed of during the coming season, and the estimated net f.o.b. factory cost of each such line, placing with each firm interested an order for any such quantities at the net f.o.b. factory cost prices; open one or more distributing warehouses in each province, with a proper organization for the handling of the business; arrange f.o.b. warehouse prices; issue catalogues with cuts and prices at which they will be sold direct to the consumer. Such a scheme as roughly outlined should considerably reduce the first cost, must very largely reduce the present warehousing offices and travelling expenses; in fact, should greatly simplify the entire proposition, at the same time making more money for the interested firms. It would, of course, result in very largely, if not entirely, eliminating the retail stove merchant; but as this is bound to be the result under present conditions, we believe in most, if not every case the present retail stove merchants would endorse such a scheme as outlined. Any details as to distribution of profits, etc., could very easily be worked out.

Yours truly,
WESTERNER.

WHAT OTHERS SAY

Wants Hardware and Metal Sent Overseas

The following is an extract from a letter recently received from W. J. Carter, Picton, Ont., President, Ontario Retail Hardware and Stove Dealers' Association:—

"In regard to HARDWARE AND METAL would say that my son, Chamberlain, went overseas and I have been mailing him *Saturday Night*, the *Kingston Whig*, and our local papers, thinking possibly in such a complete change of circumstances he would lose interest in our trade paper. This morning I received a letter from him in which he thanks me for the newspapers, but he adds, 'If you have time, do send me HARDWARE AND METAL.'"

Two sons of President Carter are overseas.

Kelly & Leduc, Hull, Que.

"Your journal is always up to the mark, and we appreciate it very much."

JUVENILE LABOR AND LONG HOURS

From the *Ironmonger*.

The fact that the Ministry of Munitions was able pretty generally to concede the workers their promised holiday at the end of September was accepted by the public as an intimation that the Department has the supply of guns and war materials well in hand. Further confirmation of that view may be found in a memorandum which has just been issued by the Health of Munition Workers Committee. It is mainly concerned with the effects of long hours, curtailment of recreation, and night labor on the juvenile members of the community who are engaged on national work. The medical investigators appointed by the Committee appear to have conducted their inquiries thoroughly, and no attempt is made to gloss over the fact that outside conditions have contributed to the marked physical deterioration which has been observed particularly in the boys. These contributory causes include the long distances that have often to be traveled daily, the indifferent care in the homes, cinema-going after work, with its attendant reduction of the hours of sleep, and lack of outdoor recreation. On the other hand, the circumstances under which the workshops have had to be run have done their share to produce the result. Among these are long hours, week-about night shifts, which preclude the worker from getting accustomed to sleeping in the day-time, and Sunday labor.

A number of recommendations are put forward by the committee, and we find in the report reason for hoping for some improvements. The following passage merits particular attention:

> Apart from the strain on the health involved, long hours had disastrous effects upon the characters of boys. They also might make an adequate amount of sleep difficult, and, perhaps most important, they prevented adequate facilities for recreation. Such facilities were of primary importance both for the physical and the moral welfare of the boys. This latter danger was accentuated by the monotonous character of their work, which afforded no intellectual interest. In the absence of healthy recreation the boys' minds and conversation were likely to become unhealthy and to lead to a general deterioration in character.

Behind that finding lie problems of grave national concern and their solution should not be negelcted.

VITAGAS

The Howard-Vaughan Co., Inc., Niagara Falls, Ont., is marketing "Vitagas," which the makers claim is a tonic that purifies and strengthens the elements of gasoline. It is said that the ingredients used in the preparation of "Vitagas" will at once begin to soften and break up all carbon deposits, and assimilate them with the oxygen thereby increasing the gasoline efficiency 30 to 75 per cent. on the gallon.

EVENTS IN THE TRADE

Mr. Anderson Improving

T. A. Anderson, president of the Merrick-Anderson Co., Winnipeg, who has been seriously ill, is fast regaining his health.

J. A. Gendron Dead

Joseph Alfred Gendron, founder of the Gendron Manufacturing Company, Toronto, died on November 26 at his residence in Ottawa. Mr. Gendron went to Ottawa to reside ten years ago.

W. D. McNeely, Chairman

G. E. Carpenter, secretary of the Prairie Provinces branch of the Canadian Manufacturers' Association, has inaugurated a Medicine Hat section with Wm. D. McNeely, of the Alberta Linseed Oil Mills, Ltd., as chairman.

Surgeon-Lieut. McVicker Killed

S. McVicker, secretary and treasurer of the Standard Silver Company, of Toronto, received word recently that his son, Surgeon-Lieut. E. H. McVicker, was killed while bending over a wounded soldier in the first advance aid post. He was struck on the head by a bursting shell and died instantly.

Death of D. W. Bolton

D. W. Bolton, of Barrie, Ontario, an implement traveler for Frost & Wood and the John Deere Mfg. Co., died on November 25 as a result of injuries sustained when his auto was struck by the northbound passenger G.T.R. train on the level crossing south of Aurora.

C. S. Turner Co.'s New Address

C. S. Turner Co. have opened offices at 147 Bannatyne avenue east, Winnipeg, as manufacturers' agents. Mr. Turner was formerly connected with the firm of Turner & Walker, who did a large storage and forwarding business in Winnipeg. This business, including the agencies handled, was taken over by Mr. Turner when the partnership of Turner and Walker was dissolved.

Business Changes

Canora, Sask.—D. H. Sutherland, hardware merchant, has sold out.

Montreal, Quebec.—Ovide Amour, hardware merchant, has sold to Morency Hardware Co.

Kinistino, Saskatchewan.—The stock of the estate of E. H. Devlin, hardware merchant, has been sold to Millard Bros.

Montreal, Quebec.—Contant, Monette & Pion, Ltd., hardware merchants, have sold their stock.

Odessa, Sask. — Wagmant Hoffart, hardware have sold out to Fitch & Schroeder.

Dominion City, Manitoba.—Robert Gillespie, hardware merchant, has been succeeded by the estate of C. Whitman

Odessa, Saskatchewan. — Wagman and Hoffart, implement dealers, have disposed of their hardware department.

Dominion Incorporations

Dominion Boiler & Foundry, Ltd., capitalized at $200,000, head office Montreal East, Quebec to deal in iron, steel, copper, and other products and to manufacture furnaces, radiators and heating equipment.

Hamilton Steel Wheel Co., capitalized at $2,000,000, head office, Hamilton, Ont., to manufacture carriages, wagons, locomotives, vehicles and conveyances of all kinds, and to carry on the business of iron masters, steel founders, etc.

The Beaver Board Timber Co., capitalized at $50,000, head office, Toronto, to carry on the business of pulp manufacturers, etc.

New Incorporations

The Lymburner Brass Works, Montreal, have been incorporated with a capital of $50,000.

The Painless Horse-Shoe Nail Co. has been incorporated at Ottawa with a capital of $120,000 to manufacture horse-shoe nails and screws of all kinds. Head office is at Toronto and the incorporators are Wilson Rudd and Edward T. Thomlinson of London, England and Harold Griffiths of Croydon, England.

Hamilton, Ont.—The Turner, Day & Woolworth Handle Co., of Louisville, Ky., have secured the property opposite the Canada Steel Goods Co., and will commence the construction of a factory early in December. Lieut-Col. Hatch, of Hamilton, who is a director of the company, was responsible for bringing this new industry to Hamilton.

Firms Registered at Montreal

The following firms have registered at Montreal: Joseph Leclair, hardware, crockery, etc.; Morency Hardware Ltd., Oscar F. Ranger.

Clenton Motor Truck Co.—Ed.

Room Products

McKinley & Northwood, Ottawa, Ont.—Please give us the name and address of manufacturers of Rome Products.

Rome Mfg. Co., Rome, N.Y.—Ed.

BY THOMAS STANFIELD

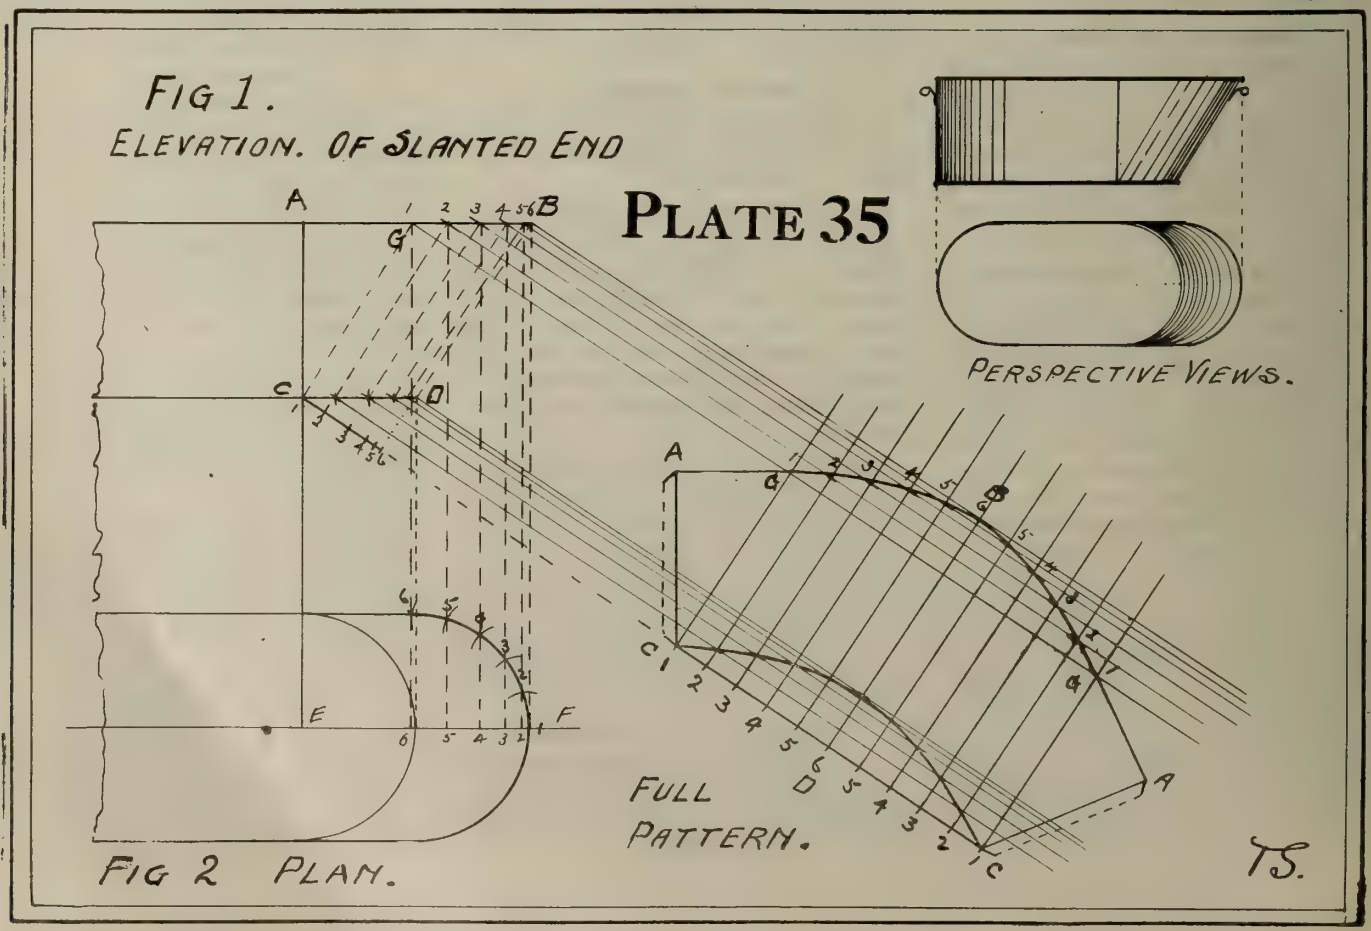
IN many ways the pattern here shown, of a child's bath tub, is similar to the development of a pattern for either an offset or elbow.

The difference, however, is that only half a circle is used with a portion of material flat for the sides.

The first step to take is to determine the slant and depth of the article and to draw the elevation and plan. Only the slanted end is required, as shown in Figs. 1 and 2. Next divide a quarter of the plan into equal parts, beginning at F. 1, 2, 3, 4, 5 and 6. From each of these points draw a vertical line, cutting A B and D, and from 1, 2, 3, 4, 5, A and B, draw a number of lines parallel to B D, intersecting C D.

Now draw a short base line from C, and mark it off as shown, using the measurements developed on line C D; this base line to be at right angles to the dotted lines C. 1, 1, 2, 2, etc., and draw a stretchout line in any convenient place. Transfer the measurements from plan, as shown at F. 1, 2, 3, etc., to the stretchout line until sufficient measurements have been transferred to allow for the whole end of the article.

Now draw lines sufficiently long at right angles with the stretchout line from each point on C. 1, 2, 3, 4, etc.



Then draw a number of lines from points of intersection in Fig. 1, A B and C D, until all the lines on stretchout line have been cut. The points of intersection of these lines will show the full pattern of the piece.

Another method may also be adopted to develop the pattern. Note the short solid base line in Fig. 1, C. 1, 2, 3, 4, 5, 6, and lines C D and A B. By placing the compass on the solid line opening up to the points of intersection on lines C D and transferring these measurements to the stretchout line for pattern the different points to cut are described, which is necessary for the lower part of the pattern. Repeat the same by opening compass to line A and B, Fig. 1, and transferring these measurements to stretchout line.

This dispenses with having to draw the thin lines shown from Fig. 1 to pattern.

Next place the compass at C A, Fig. 1, and with this radius draw an arc with point of compass at C in stretchout line. Then with A G in Fig. 1 as radius, draw another arc from G1, cutting arc just made and connect these two points C and A in pattern, repeating the operation at both ends of the pattern; the material required at each end of the pattern requires to be flat, as shown in both the pattern and elevation at A C G. Allowance must be made for the style of run at the top and base as well as the side seam, the latter only being shown.

(Continued in next issue.)

WHAT OTHER PAPERS SAY

TURNING BACK THE CLOCK

From *American Artisan.*

For quite a while there has been a movement to "save daylight" in stores, shops and factories. In some isolated cases actual tests have been made in factories all of which are said to have resulted in general satisfaction: the workers started an hour earlier, quit an hour earlier and had more of the "day" before bedtime at their own disposal; the output of the factory was greater and better, thus pleasing the stockholders.

But so far, there has been no real general effort to turn the clock back, which it is said must be done if the movement is to result in a general adoption of the rule to start and quit an hour earlier.

In Cleveland, Ohio, the proposition has been taken up by the Chamber of Commerce, and for two years Cleveland has had "Eastern" instead of "Central" time, although the railroads are not in favor of it, claiming that such a course, if followed by some communities and not by others, will cause a great deal of confusion and difficulty in the matter of train schedules.

It would seem that the simplest way would be to decide in each case to start an hour earlier and quit an hour earlier, according to the method of counting the time, without interfering with the running of the clock. There would be only a few people, we are sure, who would object to start, say at 7 o'clock instead of 8 o'clock in the morning, provided they knew that their day of work was ended at 4 o'clock instead of 5 o'clock in the afternoon. During the summer months they would then have a couple of hours good daylight at their homes in which to look after such affairs and work as might need attention, and in the winter they would usually reach their homes before sundown.

The main point to keep in mind is that we start our work too late in the day at the present time and under the present conditions.

RECIPROCITY WITH CANADA

From the *Highway Magazine.*

Motoring reciprocity now extends the entire length of the border between the United States and Canada, as the result of the joint labors of the American Automobile Association and the Canadian Automobile Federation.

It is now possible for American owners to enter Canada and Canadian owners to come into the United States without the giving of a bond for thirty days, which is a period greater than that granted by some states in motoring reciprocity with other states.

In a communication directed to the American Automobile Association at its Washington headquarters, Assistant Secretary of the Treasury, A. J. Peters, thus officially sets forth the decision:

"In regard to the admission of automobiles from Canada, without the giving of a bond, I have to advise you that the first instructions were sent on June 28, to the Collectors of Customs in New York State, it being understood that the courtesy extended to Canada, related only to automobiles arriving in the Province of Ontario from the State of New York. August 3rd, the privilege was extended to automobiles arriving at all parts on the Canadian frontier. The period of twenty-one days named in the former instructions has now been extended so as to permit automobiles from Canada to enter at all ports in the United States without the giving of a bond for thirty days."

ENTENT OF STEEL PRICE ADVANCES

From *American Metal Market.*

With the sharp advances in steel products that have occurred in the past few days, $15 a ton on tin plate, $7 on sheets, $4 on bars and shapes and $5 on plates, it may be of interest to take a fresh view of how the finished steel market has advanced. Using our composite, a weighted average of the prominent finished steel products, for delivery at mill convenience, a comparison can be made between the total advance on this movement, beginning January 1, 1915, and the advance required to bring prices up to the top reached in 1907, the highest market since 1902.

The low point in our composite reached in December, 1914, was 1.4225c. The top in 1907 was 2.075c. This level was reached late in December, 1915. The present is 3.35c. Thus the market has advanced in a trifle less than two years by $38.55 per net ton, and the advance during 1915, to reach the level of 1907, was $13.05.

The advance to the present date is substantially three times the amount required to make prices level with those of 1907, certainly a remarkable showing.

Our composite does not include standard steel rails, which are now a relatively small item, as regards our total steel production, particularly since of the total rail production a considerable tonnage is exported and there is also a considerable tonnage in light rails, prices of both fluctuating from time to time. Standard rails in the domestic market, however, have this year advanced $10 a ton.

Steel prices are advancing sharply, more rapidly than at any previous time in this movement. Nevertheless, the movement may end very suddenly, for the market is without a rudder. By ordinary rules a cessation of advances would make a hesitating market, with probabilities of declines within a few month, but precedents do not count, for there is the export demand and it may absorb what domestic buyers eventually become disinclined to take.

SELLING AHEAD MIGHT CAUSE COMPLICATIONS

From *Engineering and Mining Journal.*

The new practice of selling metals for delivery far ahead is going to be productive of some complications that may not be pleasant later. It has long been the custom in copper and spelter to do the business on the basis of two-month and three-month contracts. The common terms in lead, on the other hand, have been "shipment within 30 days." During the last two years, however, copper and spelter have been repeatedly a year ahead. Of late some business has been done in copper extending to the end of 1917.

What we are witnessing now in copper is exactly what we did in zinc about 12 to 15 months ago. At that time the zinc producers had disposed of most of their expected output for months ahead. It looked as though there were going to be a zinc famine, as if many consumers would have to go without their supplies. But somehow or other they managed to get what they needed and before the middle of 1916 consumers of zinc were themselves sellers and there was something like demoralization in the spelter market.

During the last week nearby copper has sold at 32½c per pound, a sharp rise from the previous week, indicating the apparent scarcity of it and the urgency of the demand for it. It has been gossiped, however, that the foreign governments, delayed in securing transportation for all that they had previously bought, have been meeting the demand and covering themselves by new purchases for later delivery. Whether true or not, it is just such things that check extravagance and abolish the premium on nearby deliveries. It would be rather a grim joke on the American copper industry if the foreign governments were making a profit by supplying at fancy prices domestic consumers who had overstayed their market.

COPPER VS. SPELTER

From the *Boston News Bureau.*

Brass mills do not follow any regular formula in the making of brass but for the most part they consume copper and spelter either in the ratio of 75 per cent. and 25 per cent., or 60 per cent. and 40 per cent., respectively. Manufacturers in this country and abroad have not bought spelter in proportion to their copper takings.

Copper producers are 95 per cent. sold during the first half of 1917; spelter has been sold no better than 30 per cent. for the same period. Production of both copper and spelter has been pushed to the limit, but in the case of the former it does not equal the demand. Zinc smelters have greatly increased their capacity and car shortage. Some of the spelter plants have closed down entirely, due to lack of fuel.

The approach of cold weather spells uncertainty in the western mining districts for both copper and zinc production. From now until early spring Jack Frost will play an important part in determining the production of copper and spelter from month to month.

FINANCIAL PROBLEMS NEXT SESSION

From *Financial Post.*

Sir Thomas White, Finance Minister, will be back in Canada the first week in December from an important visit to England, where he has been consulting with the British authorities. His consultation with the British Government will have considerable influence on future Canadian financing.

Until Sir Thomas returns, the Government is unable to fix the date of the opening of Parliament. The session largely hinges around the budget speech, and the Cabinet will have to know when Sir Thomas considers he could have the budget ready before calling Parliament. During the past two years the budget has been ready early in the session. The general impression is that the House will be called about January 18, but it is, of course, only guesswork until Sir Thomas is back.

It will be the most important budget in the history of Canada, as Sir Thomas will have to provide for an expenditure, war and otherwise, of some $350,000,000. He has a growing revenue this year, which will undoubtedly pass all records and may run as high as $175,000,000. That will pay for all expenditures outside of war, and probably allow us to wipe out $50,000,000 of war debt. But there will be still $175,000,000 to be provided for, which will have to be raised in Canada. In addition, Sir Thomas will have on his hands the problem of financing Britain's expenditures for war munitions in Canada—a question which he has under consideration with the British authorities in England.

WEEKLY PAINT DEPARTMENT

Jubilee Convention of Sherwin-Williams Co.

Large Gathering at Cleveland — Sherwin-Williams Company of Canada Largely Represented — Presentations to Canadian Officers by Mr. Cottingham

THE Sherwin-Williams Co. held their Golden Jubilee Convention at Cleveland, on November 13, 14, and 15, commemorating the close of the fiftieth year in business. The Sherwin-Williams Co., of Canada, Ltd., who were formerly part and partial of the American business, were invited to attend the Jubilee Convention.

There were over five hundred managers and representatives in attendance. The meetings were held in the ball room of the Statler Hotel, and the whole mezzanine floor was turned over to the Sherwin-Williams Co., including the gallery of the large dining room, in order to take care of the managers and representatives at meal times.

It was one of the largest, if not the largest, paint and varnish convention ever held, and as the Sherwin-Williams Co. have branches and warehouses distributed through out the world, it was a very cosmopolitan meeting. There were representatives from a great many different countries. Among the countries represented were: England, South Africa, New Zealand, Australia, as well as Canada and South America.

The convention was a huge success and was symbolic of the big things this company is doing to improve and perfect their business as paint and varnish manufacturers.

Lt.-Col. C. C. BALLANTYNE,
Vice-President of the Sherwin-Williams Co., of Canada.

The figures given at this convention were indeed satisfactory, and showed an enormous growth in the business. There were many interesting sessions, and among these, the session devoted to the manufacturing end of the business, showing the growth of the company in other lines than paints and varnishes, was probably the most interesting.

Erected Large Dye Works

The Sherwin-Williams Co. have erected large dye works at their Chicago plant, and are going into the manufacturing of dyes extensively. The most expert men have been employed, and some of the dyes which have been most in demand and which were formerly procured from Germany, are now being manufactured and shipped in large quantities all over the country. To the different shades which they are now making are daily being added new colors, and although the range of dye colors which the Sherwin-Williams Co. are now putting on the market is not entirely complete, a full and complete line will be offered, it is said, to manufacturers through the dye works very shortly.

The Sherwin-Williams Co., of Canada's requirements for all raw materials, of dyes and chemical colors, are taken care of through its own resources. They own and operate their own zinc and lead oxide mines. They are able to procure from their own resources nearly all of the material used in manufacturing their products.

It was emphasized at the convention that the policy of the company during the past fifty years has always been for the highest quality, and this is the policy which will be continued.

A group photograph of the Golden Jubilee Convention

Opened a Can of First Batch of Paint

A can of the first batch of SWP made by the Sherwin-Williams Co., was opened for the first time at the convention and proved to be in excellent condition. The late H. A. Sherwin, when starting business fifty years ago with Mr. Williams, considered first of all quality in the manufacturing of his goods, and this, it was pointed out, is the company's first consideration to-day.

Gifts for Canadians

W. H. Cottingham, president of the Sherwin-Williams Co., of America, and

H. M. ASHBY,

General Manager of the Sherwin-Williams Co., of Canada.

also president of the Sherwin-Williams Co., of Canada, Ltd., acted as general chairman, and during the meeting he made a presentation of gold watches to three of his business associates in this company, who had been connected with him in business for twenty-five years—Lieut.-Col C. C. Ballantyne, vice-president of the Sherwin-Williams Co., of Canada, Ltd., received one of these watches with a personal gift from Mr. Cottingham of a beautiful watch chain. Geo. A. Martin, a director of the Sherwin-Williams Co. of America, also received a watch, and W. A. Paton, who is in charge of the Calgary warehouse, was the other recipient—he also received a personal cheque from Mr. Cottingham for one thousand dollars.

A smoker was held on Tuesday, the 14th, in Moose Hall, in the form of a play—the company consisting of members of the Cleveland staff, and proved very entertaining.

On Wednesday evening a banquet was held in the ball room of the Statler Hotel, and at which the principal speakers were: Ex-President Taft, Dr. Vincent, president of the University of Minnesota, and Mayor Davis, of Cleveland. A number of the company's songs were sung during the evening, and also the different districts and divisions had their own local songs and yells. The Canadian representatives were asked to sing "Oh, Canada," which they rendered with a great deal of feeling, and it was received by the rest of the convention with hearty applause.

Canadians on Special Train

The managers and representatives of the Sherwin-Williams Co., of Canada, met in Toronto on Sunday morning, the 12th, and were taken from there direct to Cleveland on a special train. Although leaving about thirty minutes late, they arrived in Cleveland about thirty-five minutes ahead of time, making it necessary to sidetrack the regular train from Buffalo to Cleveland, at Erie.

On Thursday, the 16th, a local convention was held in one of the rooms of the Statler to go over business connected with the Sherwin-Williams Co., of Canada, and shortly after noon the Canadians departed on a special train leaving for Toronto from Cleveland.

The representatives returned to their territories very much enthused with the splendid opportunities for business in Canada, and the selling helps which they have this year will be of great assistance to their agents for securing more and better business.

NATIONAL VARNISH MAKERS CONVENE

James B. Lord, of Boston Varnish Co., Re-elected President

At the convention of the National Varnish Manufacturers' Association, held recently at New York, James B. Lord, president Boston Varnish Co., Boston, Mass., was re-elected president of the association. Other officials elected were:—First vice-president, Arthur Davis, New York; second vice-president, Carl J. Schumann, New York; secretary-treasurer, G. B. Heckel, Philadelphia; directors, F. A. Glidden, Cleveland; J. H. McNulty, Buffalo; Franklin Murphy, Jr., Newark, N.J.; and F. A. Colby, Detroit.

One of the subjects which came in for considerable discussion was the rapidly advancing costs in the prices of raw materials which enter into the manufacture of varnish. If present conditions continue, an advance in prices of varnish will become necessary. The following are some of the materials which enter into the manufacture and sale of varnish. The percentage figures show the increases which have taken place on various products since the outbreak of the war:—

Varnish gums	40%
Shellac gums	100%
Colors	100-500%
Alcohol	70%
Linseed oil	80%
China wood oil	75%
Solvents	100%
Tin containers	40%
Advertising, color cards, etc.	40-50%

of the Sherwin-Williams Co., held at Cleveland.

Meeting of Paint Association

A MEETING of the Canadian Paint Manufacturers' Association was held on Monday and Tuesday, Nov. 27 and 28, in Monteral. Officers for the ensuing year were elected as follows:—

President—Geo. Henderson of Brandram Henderson Limited.

Vice-President—Walter B. Ramsay of A. Ramsay & Son.

Geo. Edwards of Brandram-Henderson Limited, who has been secretary of the association tendered his resignation. A successor has not yet been appointed.

The most important matter under consideration was the question of increased costs of materials, manufacturing, etc. This matter was gone into thoroughly and advances in prices were decided upon, a full announcement of which appears on the paint market pages.

On Tuesday afternoon the members in a body attended the funeral of the late Mr. Aird.

DEATH OF H. W. AIRD

Montreal.—The death occurred here on Saturday, at his residence 425 Elm Avenue, Westmount, of Hugh Weir Aird, manager of the Canada Paint Company.

The H. W. Aird.

The late Mr. Aird was born at Troon in Ayrshire, Scotland and received a good education in Glasgow and Liverpool Colleges, after which he embarked on a business career. He came to Canada thirty years ago, locating in Montreal. He joined the staff of the Canada Paint Co. over twenty years ago and has acted as manager for the company for many years in which capacity he has been most successful.

Mr. Aird was one of the best known and best liked paint men in Canada and hardwaremen generally will feel the most sincere regret at the news of his death.

His interests were wide also outside of business connections. He took an active interest in sporting and athletic affairs and was a member of the Country Club Golf, the Heather Curling Club and a former member of the Westmount Bowling Club. He was a member of the Board of Trade and of the Canadian Club. In religion, he was a Presbyterian and a member of St. Paul's Church.

The funeral took place on Tuesday.

SHERWIN-WILLIAMS U. S. CONVENTION

Two New Members Added to Directorate of United States Company

At the stock-holders' meeting of the Sherwin-Williams Co., of the United States, held recently during the convention at Cleveland, Ohio, two members were elected to the directorate of the company, which now consists of nine members. The complete directorate of the Sherwin-Williams Co., of the United States, is composed of the following:—W. H. Cottingham, S. P. Fenn, J. C. Beardslee, W. B. Albright, E. M. Richardson, E M. Williams, A. D. Joyce, A. W. Frank, G. A. Martin.

BEAVER BOARD VARNISH CO. FORMED

Subsidiary of Beaver Board Co.

A new varnish industry has been formed at Buffalo, N.Y., under the name of the Beaver Board Varnish Co., a subsidiary of the Beaver Board Co., manufacturers of "Beaver Board." Work has already started on the new plant. The new company, it is said, will manufacture special varnishes, chemicals, etc.

CANADIANS DEMANDED THAT FLAG BE SHOWN

Took Thirty Minutes to Find Flag

At the recent meeting of the National Paint, Oil and Varnish Association, held at Atlantic City, one of the reports received was from the Master Painters' Committee. The report dealt chiefly with the convention of the International Association of Master Painters, held in Cincinnati last February. The report, in part, follows:—

"An incident necessitating some active work on the local Master Painters' Committee was caused by a demand made by the Canadian members of the International Association, that the Union Jack be among the decorations of the meeting place before the business of the convention proceed. It required a vigorous search of the city for fully thirty minutes to locate a British flag bearing the coat of arms of Canada. The incident was an unusual one, demonstrating the depth of Canadian patriotism during these troublous days."

PLANS TO SYSTEMATIZE BUYING

(Continued from page 23.)

prices and qualities. Then returning to the hotel, they can lock the door and go over the notes without interference, discarding the lines they are not likely to be able to sell and placing their orders for the rest.

Another merchandise man says: "We judge our buyers to a certain extent on the results of their trips to market. We expect them to visit all possible suppliers, even though there is little likelihood of buying from many of them. A concern to which we have not given a dollar's worth of business for years may 'score a beat' on its competitors with some article that is just what we can readily sell, and we expect our buyers to locate that article. We have a certain feeling of worry about any buyer who year after year places his orders with the same concerns, without learning about several live, new sources. We feel that such a buyer may be letting something worth while escape him."

Most retailers feel this way. Out of fifty-nine merchants questioned by System—many of whom do an annual business of less than $100,000—nearly two-thirds make a practice of paying regular visits to their suppliers.

Some of the buyers have certain special methods which they find are unusually helpful in keeping them in touch with market conditions. A Toledo merchant, for example, has established a kind of "experience exchange" with other merchants in the same line in different cities. He has a correspondent, for example, in Columbus, another in Dayton, a third in Cleveland, a fourth in Detroit. These merchants of course, do not compete with one another, and they can therefore write frankly and tell what goods they are buying, which styles and prices are moving best, what unusually good "finds" they have made at their markets, and so on.

"Each of us gets and gives a lot of valuable information," says the Toledo merchant, "and we all helped in deciding on what the markets have to offer, and what our customers are likely to want."

WEEKLY PAINT MARKETS

Paint Prices Have Advanced

MONTREAL

MONTREAL, Nov. 29.—The feature of this week's doings in the paint market is the unmistakable arrival of the long predicted increase in prices of mixed paints which HARDWARE AND METAL has been able to inform readers upon in ample time for them to use their opportunities to purchase (as advised by leading manufacturers) well in advance of spring requirements. While linseed oil is a shade easier, the feeling of the market is all towards firmness. Turpentine is actually firmer. White lead in oil is threatening to increase in price if the metal gets any more expensive. Painters' sundries are dearer; wastes show a swift further rise. Varnishes are increased in value with paints. The paint market, which like Rip Van Winkle has been slumbering apparently during the vast changes in prices of all marketable commodities, has awakened, and is rubbing its eyes.

Mixed Paint Prices Have All Advanced

MIXED PAINTS.—Not officially announced to the trade as yet, but nevertheless here as predicted for weeks past in HARDWARE AND METAL, and here to stay, is the increase in prices of mixed paints. By the time this meets the eyes of readers no doubt the announcement of the new prices will have been made. After important meetings in Montreal, paint manufacturers have arrived at the decision to increase prices of all mixed paints to bring them more in proportion to the immense increases in raw materials of late. The following advances may be looked for and counted upon by the trade interested:—On all high-grade house paints, a general advance of twenty cents (20 cents) per gallon. Porch and verandah paints, marine and deck paints, are similarly increased. Inside floor paint is increased by ten cents (10 cents) per gallon, and a number of the lower-priced lines of paint are to be increased by 10c per gallon. Some firms do not handle such lines at all, and some handle them only in trifling proportion to their main business. Shingle stains will show an average increase of 10 per cent., and a similar upward trend of 10 per cent. will be found in all the familiar lines of shelf goods in the paint shop. Painters' sundries will also be found advanced fully 10 per cent. Carriage paint will be up 10 per cent. White paint is only just about at a "break even" level for the manufacturers even at the new scale of prices, and the marvel is not that paint prices have increased, but that they have increased so gradually in the midst of a regular whirlwind of price advances all over the continent and the world, in almost every line of usable and marketable commodities known to commerce. That the prices should have been advanced to their present altered scale, when the first advance took place this fall, is quite a general market opinion.

Varnishes, Like Paints, Are Up

VARNISHES.—In unison with the prices of paints, the prices of all varnishes have been advanced also this week, and the new scale will be made known to the trade in course through the usual channels. On an average the extent of the increase is 10 per cent. The working basis adopted is an advance of 5c per gallon on all lines up to 90c in price, and 10c per gallon on all lines above 90c and up to $1.50, with 15c per gallon for lines between $1.50 and $2. The causes of the increase in varnish prices are similar to those affecting mixed paints, cost of raw materials, the varnish making gums all higher, and the oils, linseed and soya bean oil, all in very firm market.

White Lead in Oil Ripe for a Rise

WHITE LEAD IN OIL.—There is no change so far in prices quoted in Montreal for white lead in oil, though the market for pig lead is exceptionally firm, and the conditions as regards the oil warrant an increase in price of this product. It may be fairly safely assumed by retailers interested that an increase is on the way as regards white lead in oil. If the metal gets much higher, no matter whether the oil gets dearer or not, an increase may be expected in white lead in oil. Prices at present in Montreal are $13.80 for ton lots, and $14.10 for the smaller quantities.

Linseed Oil a Shade Easier, But Firming

LINSEED OIL.—Flax seed in the North-West went much firmer during the present week, and was selling at $2.55 per bushel about Wednesday, with a firmer trend also. Raw linseed in the car load was still over the dollar in price, though the tone of the market had been rather weaker. It is expected that considerable buying may be done if linseed oil returns to a dollar or less per gallon, as the feeling is all for further firmness even if a passing decline is noticed. There is certainly an insufficient supply of this product to meet world-wide demand, and on the American Continent and in Canada the shortage is apparent in price increase. Prices quoted in Montreal in the trade are still at the figures of last week's quotations as follows:

Per gallon Imp.	Raw.	Boiled.
1 to 4 bbls. ...	$1.15-1.20	$1.20½-1.25
5 to 9 bbls. ...	1.14-1.19	1.19½-1.24
10 to 25 bbls...	1.13-1.18	1.18½-1.23

Turpentine Shows Rising Tendency

TURPENTINE. — Turpentine, which has been in fairly easy market, though with a firming tendency for some weeks, took a much firmer tone this week, and was quoted well above the 70c per Imperial gallon, which had been the lowest figure learned of in the trade in Montreal last week. An increase of from 3c to 5c per gallon was recorded over the generality of the trade willing to quote, the increase being due to the firm tone of the primary market, and the general tendency of the whole trade in mixed paints and their constituents. Following are average prices:

	Per Imp. gal.
1 barrel lots	73c-78c
2 to 4 barrels	72c-77c
5 to 10 barrels	71c-76c

Wastes Show Still Further Increases

WASTE, ETC.—Waste prices show further increases this week, though the

If You Could Get a $1,000 Order By Writing One Letter—Would You?

EARLY last December a hardware merchant in a small town read an advertisement in his favorite trade paper and wrote a letter in reply to it.

"That letter," he told one of our travellers last week, "brought me over a thousand dollars' worth of business—because through it I obtained a Brandram-Henderson agency, with the result that my 1916 paint sales were $1,050 ahead of my best previous year."

This merchant does not hesitate to give much of the credit for his increased paint business to the active assistance given him by the B-H organization.

He is to-day very glad that he wrote that first letter, asking for "the B-H agency proposition," last December.

If **you** are a responsible, progressive merchant, in a locality where we are not already represented, a similar letter written to-day may be followed by the same gratifying results in 1917.

Write the letter, anyhow, and when our complete proposition is before you, see if you're willing to turn it down.

BRANDRAM-HENDERSON LIMITED

Montreal, St. John, Halifax, Toronto, Winnipeg

If interested, tear out this page and keep with letters to be answered.

last rise in these lines was recorded only last week. For cream polishing waste 20½c is charged now per lb., as against the 18½c of last week. White wiping waste is up 1c again, and colored wiping wastes show varying increases, as: Fansy, 1½c up to 14½c; Lion, 1¼c up to 13c; Standard, 1c up, now 11½c; Popular, 1c up, now 10½c; Keen, 1c up, to 9½c. Glass continues as firm as ever and scarcer. Putty is in firm market still, and will remain so. Gasoline is unchanged in price, still 27½c per gallon ex tank car.

TORONTO

TORONTO, DEC. 1.—The big feature in the paint markets during the week has been the advance of 20c. per gallon on all mixed paints, both in colors and whites. This advance has followed repeated intimations given in the columns of HARDWARE AND METAL that an advance could undoubtedly be looked for. The advance was made necessary by the high price of linseed oil and the advance in other raw materials. Local paint men were advised of the change on Wednesday of this week. Linseed oil has held steady in price during the week. Turpentine on the other hand has advanced 3c. per gallon in most instances. The demand for this article is reported fairly good, considerable quantities being used in various lines of manufacture. Gasoline holds steady in price, with the exception of the better grades used by rubber concerns, where an advance of 2c. per gallon has been recorded. No definite intimation of higher prices in glass has been made as yet, but dealers are anticipating that higher prices will prevail for the spring deliveries of glass. White lead is in a very firm market and an advance would not come as a surprise to many dealers in the trade. Business has been seasonably good during the week. Bookings for spring delivery have been heavy so far, in some cases reported much ahead of last year.

Mixed Paints Make Jump Upward of 20c

MIXED PAINTS.—Mixed paints have advanced 20c. per gallon during the week and are now selling at $2.80 for colors and $3.05 for whites. This advance has been in accord with the predictions made in these columns for several weeks past. With the increased cost of all raw materials and the high price of linseed oil it was pointed out that there seemed no other way out of the situation other than through higher prices. Porch paints have also advanced 20c. per gallon, while inside floor paints and barn paints together with paint sundries have advanced 10c. per gallon. Orders for the spring trade in trade are reported exceptionally good.

Linseed Oil Held Steady in Firm Market

LINSEED OIL.—Linseed oil has held steady during the week with the demand reported somewhat light. The flaxseed market has again had its ups and downs but within narrower limits than the previous week. On Thursday of last week it closed at $2.66½ in Winnipeg, and on Wednesday of the present week it closed at $2.58 per bushel. On Monday of the present week it was down as low as $2.54 per bushel, but has shown a disposition to firmness during the first part of the week. As a result linseed oil has remained in about the same position as it was last week, the range of prices being practically the same, with 1c. lower price in certain quarters. One concern was out of the market altogether during the entire week, not caring to give any quotations. Receipts of flaxseed at Winnipeg still continue to be fairly heavy around 35 to 40 cars daily. Oil men assert their belief that as soon as present heavy deliveries of seed ease off somewhat there will be a still greater firmness in the price of seed. Oil cake is holding steady at a price range of $45 per ton in large lots and $48 per ton in small lots.

	Raw	Boiled
1 to 2 barrels	1.10-1.20	1.12½-1.23
3 to 5 barrels	1.09-1.19	1.11½-1.24
6 to 9 barrels	1.08-1.18	1.10½-1.23

Turpentine Quoted Up 3c Per Gallon

TURPENTINE.—In certain quarters the price of turpentine held steady during the week. In other quarters there was an advance of 3c. per gallon recorded. It is now quoted as high as 79c. per Imperial gallon, with the low quotations of last week advanced 2c. per gallon. The range of prices is now from 71c. to 79c. There was a continued firmness in the primary market during the week, at Savannah on Monday of the present week it sold as high as 50c., but was a trifle easier in price by a half cent per gallon on the two following days.

1 barrel lots (per Imp. gal.), 71c.-79c.; 2 to 5 barrels, 70c.-78c.; 6 to 9 barrels, 69c.-77c.; 5 gallons, 76c.-86c.

Higher Grades of Gasoline Advance 2c

GASOLINE.—The higher grades of gasoline used by rubber manufacturers have advanced 2c per gallon during the week, and are now quoted at 33½c per gallon. There is a scarcity in this grade of gasoline, and manufacturers have found it difficult to supply the demand owing to the big consumption of motor gasoline. Motor gasoline, on the other hand, has held steady in price during the week, and is quoted from 26½c to 27c per gallon. Benzine is quoted 1c under gasoline. Continued steadiness is looked for in gasoline.

White Lead in Oil Has Not Advanced Yet

WHITE LEAD.—Prices in white lead in oil have not advanced during the week, although paint men in certain instances confidently look forward to an increase in the near future. There is a firmness in the market, due to the higher prices being paid for pig lead on the New York market. In that market on Wednesday of this week pig lead advanced 20c per 100 pounds, and is quoted up as high as $7.50. The demand for white lead continues to be light. Locally the prices at the time of writing were $14.25 in small lots and $13.95 per 100 pounds in ton lots.

Shellac Gum Advances; Varnish in Firm Market

SHELLAC AND VARNISH.—Varnish continues in a very firm market, although prices have not been changed upward. With the gums scarce and at high price, with linseed oil high in price; and turpentine quoted at high figures, all the raw materials of its manufacture are doing their share to send the manufactured product up. In the primary shellac market there continues to be excitement and firm prices. At New York the gum was quoted as high as 40½c per pound. Locally the shellac gum has advanced to 44c per pound, which is in keeping with the price in the primary market.

RE-ROLLED STEEL MATERIAL

An American trade journal calls attention to the variety of uses to which croppings and discards from the manufacture of shell steel are being put. Not only are discards rolled into bars, but it is reported that some of this rejected steel is to be rolled into sheets of tin-mill sizes in an effort to meet the demand for tinplate. This method of utilising certain classes of scrap steel is no novelty in Britain. Many years ago the Sheffield mills discovered that re-rolling was a far more profitable way of disposing of old rails, rail crops, shafting, and the like than cutting it up for melting purposes. The practice of re-rolling gave the trade a regular supply of cheap finished steel of considerable commercial value, and thereby secured for this country a profitable export business. The scrap is rolled into sheets, rods, and other forms, particularly spring steel. More recently the same practice was taken up in the Midlands and on the North-East Coast, but apparently America is just waking up to its value.

DU PONT

Powders

are the

Hunter's Reliance

FOR dependability and stability the sporting powders made by this century-old company have gained world-wide recognition. This display of confidence is a proof of their popularity, and enables dealers to simplify stocks and make quick and profitable sales.

Du Pont Sporting Powders are noted for their high velocity, penetration and moderate recoil.

The leading ammunition companies load Du Pont Sporting Powders. They are also sold in bulk in popular metal canisters.

For shells and bulk packages, specify Du Pont loads —the hunter's reliance, and the best powders to sell.

E. I. du Pont de Nemours & Co.

Profitable Varnish Selling

WHEN you sell a customer his first can of "Berry" Varnish he will ask for it next time.

Berry Brothers' Varnishes not only win trade but hold it.

The unvarying quality of our line is widely recognized by varnish buyers. This is why all products bearing Berry Brothers' label are so safe to recommend, satisfactory to handle, and easy to sell.

Here are some profitable specialties. They are staples of the varnish trade and ready sellers.

LUXEBERRY WHITE ENAMEL—whitest white, stays white. Makes a permanent snow-white finish in either gloss or dull effects.

LIQUID GRANITE—floor varnish. Makes a smooth, satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY WALL FINISH—produces artistic color effects on walls. Makes a soft, velvety finish in twenty-one attractive colors and shades.

LUXEBERRY SPAR — for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes a handsome finish and will not turn white under the severest conditions of wear.

Order Now for Next Spring

This is the time of the year when all live Paint dealers check up their stocks and place orders for the paints and other finishes that they need to complete their lines for Spring Selling.

Canada Paint

agents never have to guess how much stock to order, for they know that our selling plans will make theirs the liveliest paint line in their locality—all they need to know is that their stock contains the "full line" of C.P. Products.

If you are interested in controlling the paint and varnish trade in your district, ask us how we move goods off the shelves of "full line" C.P. Agents.

The Canada Paint Co., Limited

572 William Street - Montreal
112 Sutherland Avenue - Winnipeg

Re Gauges and Prices of Sheets.

Prices on black and galvanized sheets given below are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	5 50	5 50

Listen—Something NEW!

To you hardware fellows who have never had the Lowe Brothers' proposition explained, we say: you don't know ALL the possibilities of the paint business—you can't be sure you're getting ALL the paint business you should get—you don't know ALL that a live, up-to-date paint maker can do for you until you listen to the Lowe Brothers' complete agency plan.

In other words, there IS something new for you in the Paint business. Let us get together SOON.

LOWE BROTHERS' products are essentially QUALITY GOODS.

Lowe Brothers LIMITED TORONTO

Lyon Paint & Glass Co. Limited Winnipeg

WANTED, AT ONCE — CAPABLE HARDware man to manage retail hardware business in thriving Ontario town. State experience, salary expected, and give references. Apply Box 182, Hardware and Metal.

Men who are capable of managing a retail hardware business are not easy to find. The position requires a high type of ability. Above all, it requires a man who recognizes opportunities and who knows how to make the most of them. That type of man in the hardware business is almost invariably a reader of HARDWARE AND METAL. There were fifteen replies to the advertisement shown here. It was a point in favor of all the applicants that they were in the habit of reading HARDWARE AND METAL.

USE THE WANT AD PAGE

A Straight Talk from the Manager

No. 53

You Can "Clip Coupons" Every Day

The buyer for a large New Ontario hardware firm was chatting with a salesman the other day, when the subject of Hardware and Metal came up.

"I don't know what we would do without it," said the buyer. "In these days of sensational price changes, it is repaying many times over the money we have invested in our subscription for years past."

Every hardwareman in Canada should be making big money out of Hardware and Metal these days. Use it! Use it every day, and many times a day!

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability. Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

MR. CLERK → Your Spare Time

WHAT do you do with it? By that we mean, is it *bringing you* any returns in the ways that go to assure your future success?

How would you like to know of a plan that will bring you in as much (if not more of an income) than your regular occupation. *Would you be interested?*

We have a plan by which hundreds of *clerks* throughout Canada are greatly increasing their weekly incomes. This plan interferes in no way with their regular duties. It helps them to become of more value to their employers as well. Besides it supplies them with extra funds.

Write, and we'll give full particulars concerning it. This places you under no *obligation,* we'll be glad to tell you all about it. Drop us a line *To-Day.*

SHOO-FLY ROCKER

A big selling Proposition

We present extra value in these Shoo-Fly Rockers. They are hand-finished in Dapple Grey in contrast to the regular machine finish in burl-walnut. Bridles, saddles and trimmings are handsomely painted in bright colors.

When beauty invites purchases, and then strength and service gives the utmost in satisfaction.

PROTECTION

Leave Your Wife Protected When You Leave Home

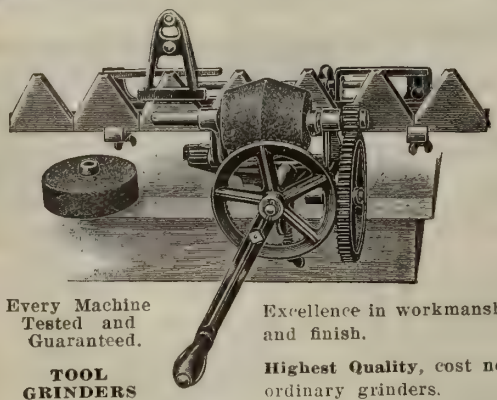
Doesn't matter how scared she feels about ordinary firearms, show her the Colt Automatic Pistol and explain the famous grip safety to her and she'll feel perfectly secure.

Explain that she must purposely pull the trigger and compress the grip safety before the Colt will fire.

Then explain when firing is necessary she does this automatically and naturally (without thinking), which ensures her getting the drop on her assailant in a flash.

Buy the Colt because it's safe; buy it because of its quick action. It costs more to make—costs you the same.

PREPAREDNESS



Sell Colt's and Safeguard your Customers!

The Man with a Horse

You can interest every horse-owner if you ask him to look at the Ventiplex Line—housings, sweat pads, and Saddle blankets. He will perceive the value of these things to him, and out will come his money to possess them. Every horse owner in your community ought to be worth at least a dollar profit to you each year. So count up the number of farmers, teamsters, delivery men and people owning horses for pleasure in your territory; and then reckon the income that you can obtain from selling them a single line.

"Comfy" Weather Strip

This is the season for getting things snug for the winter. Weather Strip is selling freely right now. Supply customers with "Comfy" brand—put up in 1 lb. Cartons (39 feet). Good profit maker. **Order without delay.**

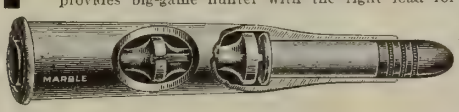
TRADE MARBLE'S MARK Helps For Hunters

Every one of Marble's Sixty Specialties for Sportsmen is a positive HELP to the hunter. The three items shown here are particularly in demand now and during the next few months.

Marble's Safety Axes

Famed for their QUALITY and UTILITY. Small enough for the pocket—big enough to fell a tree. Heaviest model only weighs 27 ozs. Made in several styles and sizes with wood or steel handles—plain or claw back. List prices $1.50 to $3.00.



Extractor with Section of Broken Shell

Marble's Broken Shell Extractor

Slips inside broken shell — grabs it by the nose — a little pull brings it out—no chance to damage rifling—no fumbling around in cold trying to pry out the shell with knife or nail. List price 75c.

Marble's Auxiliary Cartridges

Eliminate cost of large calibre ammunition for target practice—also provides big-game hunter with the right load for small game. Made for rim and rimless cartridges—and for practically all American rifles.

List price 75c each. See catalog for complete details.

TRADE SUPPLIED BY JOBBERS

Stock up now before prices advance. Complete catalog upon request.

JENKINS BROS.' PUMP VALVES

proved best and cheapest because of their long leakless service.

They are scientifically compounded from pure rubber and other ingredients to meet the imposed conditions exactly.

Whether your pumps are operating against a low or an extreme head in handling cold, warm or hot water, brine, naphtha, acids, ammonia, gritty water or other fluids, we can furnish the right Jenkins Bros.' Pump Valves to give the most economical duty possible.

Thousands upon thousands are daily proving their ability to stand up under all demands in the leading power and pumping plants in the country.

When ordering state diameter, thickness and size of hole in addition to head pumped against, the kind and maximum temperature of the fluid to be handled.

Write for No. 8 Jenkins Bros.' Catalog.

WE HAVE THE STOCK. WE GIVE THE SERVICE.

44 to 50 Wellington Street East, Toronto, Ont. Also at Guelph, Ont.

A Durable, Convenient, Clean Cut, Safety

CAN OPENER

That sells on sight. An absolutely necessary article to every family or individual. List price, $10.00 per gross. Liberal discounts, according to quantity. This is a profitable opportunity.

MONARCH ELECTRIC COMPANY, LIMITED

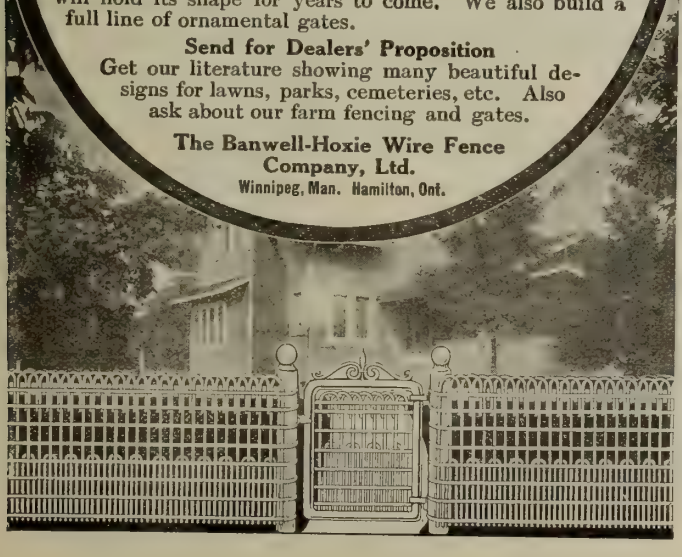
St. Lambert, P. Q.

DISTRICT MONTREAL

Dealers—Handle this Fence

YOUR success in the sale of fencing does not depend so much on your sales ability as on the fencing you sell. It's fence service—not price—that brings you customers. Ours is a fence of service—a fence of repeat orders. We have letters from dealers all over the Dominion substantiating these statements.

Peerless Ornamental Fencing



not only protects, but beautifies property as well. Every stay is made of strong, stiff wire that will not sag. Our fencing is made from galvanized wire and in addition, is given a coating of zinc enamel paint, thus forming the best possible insurance against rust. Peerless fence is easy to erect and will hold its shape for years to come. We also build a full line of ornamental gates.

Send for Dealers' Proposition

Get our literature showing many beautiful designs for lawns, parks, cemeteries, etc. Also ask about our farm fencing and gates.

DEALERS, ATTENTION

NOVELTY SELF-FEEDER *HOT AIR* FURNACES *are the best sellers*

The whole trade wants them because they make sales; because they save—
TIME, LABOR, COAL

Because they heat equally
ALL DAY and ALL NIGHT

The self-feeder principle places "NOVELTY" furnaces, which have been leaders for 30 years, away ahead of all others and—
THEY COST NO MORE

Write now for Catalog and Prices.

Toronto Furnace & Crematory Company, Limited

HEAD OFFICE :
111 King St. East, TORONTO

See our display, Stove Building, at Toronto National Exhibition.

Tough, Uniform

LONDON BAR IRON

THIS IS THE BEST LINE OF BAR IRON THAT YOU CAN BUY OR SELL.
Its uniformity of texture, toughness, and easy workability MEANS HIGHLY PLEASED CUSTOMERS AND RE-ORDERS.
The grade is equal to the best and the price is as low as we can make it without sacrificing anything of its quality.

London Rolling Mill Co., Limited, LONDON, CANADA

Sales Agents: Manitoba—Bissett & Webb, Limited, Winnipeg. British Columbia—McPherson & Teetzel, Vancouver.

Corrosion-resisting

I.N.C. NICKEL

Shot—High and low carbon. Ingots—Two sizes, 25 lbs., 50 lbs.
ELECTROLYTIC NICKEL—99.80%.

Prime Metals for the Manufacture of Nickel Steel, German Silver, Anodes and all remelting purposes. Our Nickel is produced as Rods, Sheets, Strip Stock, Wire and Tubes.

MONEL METAL

We are SOLE PRODUCERS of this natural, stronger-than-steel, non-corrodible alloy.
Manufactured forms are Rods, Flats, Castings, Tubes, Sheets, Strip Stock and Wire.
Send Inquiries Direct to Us.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

SITUATIONS VACANT

HARDWARE TRAVELLERS WANTED TO carry as side line a popular priced paper baling machine. Exclusive territory. Every dealer a prospect. Box 409, Hardware and Metal, Toronto.

SITUATIONS WANTED

HARDWARE SALESMAN DESIRES POSITION—eight years' experience, best of references. Box 411, Hardware and Metal, Toronto.

THE "CHANGING TIME" IS GETTING near. There are many firms who have vacancies on their sales or office staffs to fill during the next few months. If you want to qualify for some of these vacancies, tell your story briefly in a Condensed Advertisement, and try it out in Hardware and Metal. A twenty-five word advertisement may land you a permanent position with splendid prospects.

AGENCIES WANTED

MANUFACTURERS' AGENT IN CANADA desires Canadian rights on small article to sell through display advertising. Correspondence and catalogues solicited. Frank R. Burgess, 407 Hope Chambers, Ottawa, Canada.

WANTED. WE HAVE AN OPENING TO represent one more good factory (Canadian) for British Columbia, Alberta and Saskatchewan. Must have possibility of large overturn. The F. R. Murray Co., Ltd., 117 Pender Street West, Vancouver, British Columbia.

THE SUREST WAY FOR THE MANUFACturers' agent to connect with good live firms, is to tell the manufacturers who read Hardware and Metal, all about his ability to sell their goods. Try an advertisement on the Condensed Ad. Page of Hardware and Metal, under this heading.

STORE EQUIPMENT FOR SALE

YOU MUST HAVE A LOT OF OLD FIXtures around the store which are no longer of any value to you, but would prove very useful to someone else in the hardware business. Find a purchaser for this equipment through an advertisement on Hardware and Metal's Condensed Ad. Page.

FIFTY DOLLARS TIED UP IN OLD FIXtures that you are no longer using, would make a lot of money for you if invested in stock and turned over three or four times a year. Get your money out, by selling the fixtures to one of Hardware and Metal's readers who may be looking for exactly what you have to offer.

MACHINERY FOR SALE

FOR SALE — GASOLINE LIGHTING plant, also a number of second-hand tinsmiths' tools and machines. Apply H. L. Albrecht, Newton, Ont.

BUSINESS CHANCES

TO SELL—HARDWARE STOCK AND FIXtures in a live western Ontario town. About six thousand dollars will handle. Reasons for selling. Will gladly furnish any information desired. Apply Box 405, Hardware and Metal.

HARDWARE BUSINESS IN HAMILTON for sale. Stock and fixtures about $5,000. Store and dwelling could be carried on $3,000. Box 406, Hardware and Metal, Toronto.

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

IF YOUR HARDWARE BUSINESS IS FOR sale, who is more likely to buy it than a hardware man, be he merchant, clerk, or traveller? It is only hardware men who read Hardware and Metal, and a condensed advertisement in this paper offering your business for sale, will put you in touch only with the people who will be most interested.

MISCELLANEOUS

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited Room 314, Stair Building, Toronto.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

Kindly Mention This Paper When Writing Advertisers

A New Year is coming

and round about January is a good time to get superintendents and bosses to consider new equipment. Suggest to the men at the head of Machine Shops in your territory that they give

Delta Files

A thorough try out, with a view of discovering whether or not they are as good as we say they are. We say that Delta Files will cut faster, wear longer, and retain their cutting edge longer than any other files made.

We back up this claim with a money-back guarantee.

There is a Delta File for every requirement — the right size and shape of file.

Delta Files are the only files of from 3 to 24 inches made absolutely of crucible steel.

The agency for Delta Files is a good one to have —write us for the nature and terms of our proposal.

HARDWARE AND METAL

Vol. XXVIII No. 50 PUBLISHED EVERY SATURDAY SINCE 1888 Dec. 9 1916

THE MACLEAN PUBLISHING COMPANY, LIMITED

PUBLICATION OFFICE: TORONTO, CANADA

Who's Your Best Customer?

Whose trade means most to you in the course of a year? Is it the home owner who buys a few things for his house? Is it the sportsman who buys a rod, a gun, a camera; or the autoist who buys a spark plug?

It is none of these—the best customer you have is the machinist—he buys all the things for his home that other men buy, and in addition he *must* purchase $75 to $200 worth of fine tools. Most machinists choose

TRADE MARK
Starrett Tools
REG. U.S. PAT. OFF.

because these are the recognized standards for mechanical accuracy. To get the most out of your fine tool trade, you should run frequent displays showing to the machinist new tools and better tools that he can add to his kit.

The Starrett line includes 2100 styles and sizes of fine tools; among them rules, tapes, squares, calipers, dividers, depth gages, height gages, vernier calipers, combination sets, micrometers, surface gages, etc.

Ask the Starrett salesman for window display material, counter mats, signs, newspaper cuts, etc. Send for a supply of catalogs No. 21M.A. for distribution to customers.

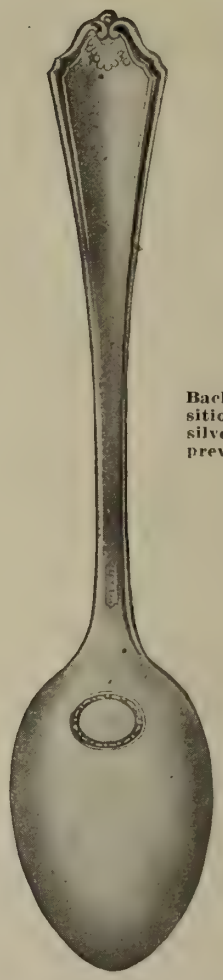
Sterling Ware Service
Plated Ware Price

The PATRICIA
With the Silver Mound

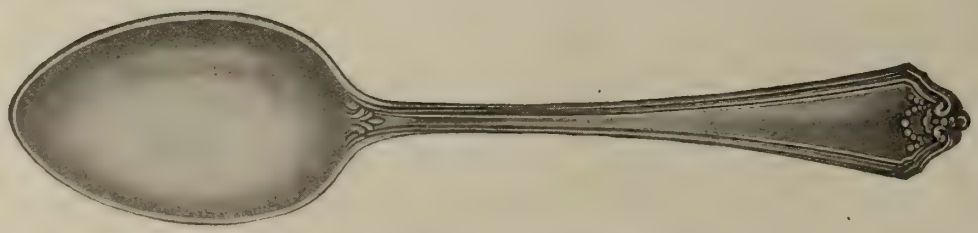
See the Sterling silver mound? Note its position—just where ordinary plated ware shows signs of service. Add to this—a heavy deposit of silver on an 18 per cent. nickel base, and therein you have a serviceable, saleable tableware.



Remember, we produced the Patricia as an answer to the demand of the trade. The trade asked for it, finding it a public need.

And here it is—a pleasing design of tableware, that gives the long service of sterling silver, yet costs no more than plated ware.

An attractive line that offers splendid discounts—write for information regarding the pieces mentioned herewith.



McGLASHAN, CLARKE
COMPANY, LIMITED

NIAGARA FALLS : - ONTARIO

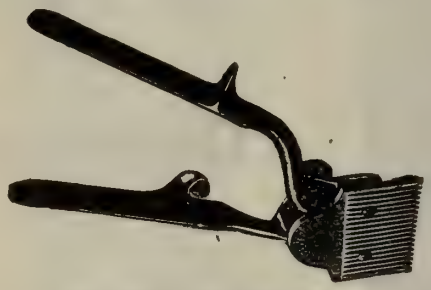
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.

Accurate Inspection

Starrett Bench Micrometer

Speeding Up The Final Test

The final inspection of duplicate parts and other small pieces take so much time that it frequently serves as an excuse for inefficiency.

That excuse is unnecessary—absolute precision can be maintained and rapid work insured with a Starrett Bench Micrometer.

This instrument combines the scope and variety of use of a micrometer with the convenience and speed of a fixed gage. The heavy base gives a stability that increases the inspector's speed, while the micrometer adjustment permits wide range of work, and the lock nut gives all the value of a solid gage in measuring parts of the same size.

Hardware salesmen who emphasize this point can make sales to the manufacturer—but you must **create** your prospects. Go to them—don't wait for them to come to you.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Worth Looking Into

Our Selling Service helps your Tool Department and every other part of your store. We are putting fifty years of study and experience on tool selling at your service in every way that we can—in the Selling Helps we offer you—in our handbook, "How to Sell Tools"—in our monthly paper, the "Millers Falls Star"—and through the representative that calls on you.

When you buy Millers Falls Tools, you buy merchandise plus this service that helps you turn your tool stock more quickly and puts a bigger net on your profit side.

If you are one of those who haven't yet learned what this Millers Falls Selling Service means—because you buy through jobbers or for any other reason—write us to-day and we will tell you all about it.

A Big Seller

Here's a tool with a big sale, because it is practically a hand drill and a breast drill combined. Mushroom head just fits the hand or is useable as a body rest. Three-jaw chuck takes round shanks up to ⅜-inch. Cut gears, pinions enclosed—ball-thrust bearing.

Ought to be included in every tool stock.

Efficient Workmen Prefer the "Famous Five" Files

Therefore, it is good policy for you to sell them, because, when you carry the "Famous Five" the mechanic knows that your judgment on tools is sound and he is likely to come to your store, not only for files, but for other tools that he needs in his shop.

It is just as well to specify the "Famous Five" when ordering from your jobber.

The "Famous Five" Are:

SUBSCRIPTION PRICE—Canada, 3$ a year; Great Britain, South Africa and West Indies, 12s. 6d. a year; United States, $3.50 a year; other countries, $4 a year; Single Copies, 10 cents. Invariably in advance.

WE HELP YOU SELL

O-Cedar Polish

(MADE IN CANADA)

Not only are we spending thousands of dollars advertising O-Cedar in the daily and weekly papers and in the magazines to help your sales, but we are ready to help you right in your own store.

THIS FLOOR DISPLAY STAND IS FREE

to you with an individual order, to your jobber, for $100 (net) of O-Cedar Polish and Mops.

It is a very handsome piece of store furniture. It is made of metal in Circassian Walnut finish, and will hold a good stock of O-Cedar. It is 45 in. high, 12¾ in. deep, and 25½ in. wide.

ORDER TO-DAY FROM YOUR JOBBER AND GET THIS STAND.

As Our Supply is Limited.

CHANNELL CHEMICAL COMPANY, LIMITED - TORONTO, CANADA

The First Stanley Garage Door Hinge

was made for one of our factory officials. He was building a garage and wanted hinges suitable for the heavy doors.

So we devised a hinge especially to fit the purpose—a combination of an extra-heavy ball bearing butt and a long ornamental strap hinge. We corrugated the long arm to give it greater strength; we gave it an offset so the door could be thrown clear of the entrance; and then we perfected the design so that it would dignify the appearance of any garage.

The official we made it for was delighted. So we standardized the hinge in different sizes and finishes, and now it is part of our regular stock.

That's the idea behind Stanley Garage Hardware—to make an article that will fulfill actual garage requirements so perfectly that when we put it into your hands it will sell to garage builders almost on sight.

The Stanley Garage Door Hinge was the first piece of hardware ever made especially for garage use, and we are still the only manufacturers of a complete line of Garage Hardware. Not only does it sell readily, but you will find it very profitable. If you are not already handling it, write to-day for information and Catalog R122.

Canada's Only Weekly Hardware Paper

HARDWARE AND METAL

Published Every Saturday Since 1888

Vol. 28 TORONTO, DECEMBER 9, 1916 No. 50

New Features to Assist Retailers

A New Series of Articles to Start Next Week—Stock-taking Problems—What Clerks and Merchants Should Know—Extent of Price Changes During the Year —A Series Worth Many Dollars to Readers.

DURING the coming stock-taking period, retailers will find that they have on hand stocks of the same goods which have cost them widely different prices. For instance, a retailer may have on hand 50 kegs of nails bought at $3.50 base. He will also have on hand a considerable quantity of nails bought during the past couple of months at a cost of over $4 base. He will probably have some sizes, bought $3.75 base. At what price should the nails be taken into stock? The same applies to almost any line of hardware and cutlery to-day. There are retailers to-day who have good stocks of clocks on hand which were bought at $2.00 each. The wholesale price is now $2.40. There are merchants who still have a fair stock of pocket cutlery which cost $4 per dozen and cannot be replaced below $6 dozen. You will find the same condition prevailing all along the line in the hardware stocks.

If a merchant's store burned down, on what basis would the insurance companies want to adjust the losses. Would they be willing to adjust the loss on the basis of to-day's wholesale costs when they know that a considerable portion of the stock was purchased at figures below the present costs. How would a fire affect a merchant under the 80% clause?

Is a manager, who is managing a business for a company, justified in taking stock at to-day's cost when much of the stock was purchased or booked at lower prices than those now prevailing? On what basis will the large retail and wholesale firm take stock—those whose business is large enough to be subject to the Dominion Government tax on profits.

If the large retailer or wholesaler takes stock and figures on present costs, he will make a remarkably good showing. If, on the other hand, he takes stock at actual cost price of the goods, his stock will be inventoried at a figure much lower than it would cost to replace the goods to-day. If on the other hand he figures in his stock at to-day's prices and the market goes to pieces six months or a year hence, he will make a poor showing next year.

What is the opinion of Canada's Finance Minister on the subject? He introduced the war tax on profits and must have some views on the subject. What is the opinion of the Insurance Companies? They are called upon to adjust losses every day of the week. What is the opinion of the Credit Men's Association? How could a merchant or firm benefit by taking a double inventory showing goods at actual cost price and also showing goods at present-day costs?

This has been an unusual year. A merchant can sell a keg of nails to day and do as much business in dollars and cents as he did by selling two kegs two or three years ago. He can on some lines sell half the quantity of goods and still do as much business. He can hold a much smaller stock and still have a stock valued in dollars and cents at as much as the stock of two or three years ago. These and many other features must not be overlooked during the coming stock-taking period.

With the approach of the stock-taking period, there are many problems which confront the retail hardware merchant. The problems this year are greater in number and more varied in character than those experienced in any previous year. After 2½ years of war the markets are in an unprecedented condition. New conditions have brought new problems, which must be worked out to apply to business as it is being conducted to-day.

In accordance with HARDWARE AND METAL'S policy, many of the problems which will confront retailers during stock-taking next month, have been anticipated, and an effort will be made to give the retail trade practical assistance through these columns. A series of articles, to commence next week, is now being worked out. The many questions previously referred to in this article will be dealt with in the new series. Every retailer should watch for the series. But there is still more:

Where List Prices Have Changed

During the past year many new hardware lists have been adopted. In many cases where old lists are still in effect the manufacturers quote list plus a certain amount, instead of a reduction which applied a year ago. The merchant who figures present discounts from old lists which have been cancelled, will stand to lose considerable amounts both in his financial showing and in the price which he secures for goods over the counter. In order to reduce to a minimum the chances for errors of this kind, HARDWARE AND METAL will run a special article just prior to the stock-taking period, telling the trade of the lists which have changed during the year and giving the dates when they became effective. HARDWARE AND

METAL will also give the new discounts and the percentage of advances. For instance, flat head bright wood screws, at the time of writing, cost exactly 50% more than they did a year ago, and the difference may be greater before the end of the year. These changes have all been noted in HARDWARE AND METAL'S weekly market reports, but they will be summarized in brief form for the "stock-taker" and will appear in the last issue of December.

What All Clerks Should Know

Every hardware firm suffers losses each year through clerks—and very often proprietors—breaking glass when attempting to cut it. Why does it happen? Simply because in 90% of the cases they do not know how to cut it properly. HARDWARE AND METAL is going to show them how to eliminate the waste. A new series of articles is going to appear early in the New Year. It will be different to anything that has yet appeared, so far as we know, in any paper.

The first article will be illustrated and will show how to cut glass properly. Glass is very seldom exactly flat. The sheets are slightly concave. On which side do you cut or attempt to cut the sheets? There is only one proper way. This will be explained fully in HARDWARE AND METAL. We will tell why the glass is seldom flat and show you how this affects the cutting operation. The article will be arranged typographically in such a manner that every hardwareman will want to remove the page from HARDWARE AND METAL and fasten it up near the glass-cutting board for the benefit of himself, his present clerks and the new clerks who are to come.

For the sporting goods department, an article will appear, giving instructions regarding the sale of fire-arms and ammunition. This article will also be set up in attractive form. You will be able to remove it from HARDWARE AND METAL and display it in the sporting goods section where your clerks and customers can read it. If your clerk, through ignorance of the law, sells certain fire-arms or ammunition, you are held responsible and are liable to a penalty. Protect yourself and your clerk by providing a printed form setting forth the law. A $50 fine was imposed in Toronto recently in a case where a fire-arm was sold to a minor.

The two foregoing articles will be worth far more than the yearly cost of HARDWARE AND METAL and yet we give only brief details of two of a series of twelve now being prepared. There will be at least twelve articles in the series—probably more. Each article will be of real service and will mean an actual saving in dollars for every subscriber who uses them.

There are several other new and practical features which will be announced early in the New Year. They will be worth many dollars to the merchants who make use of them.

A Good Christmas Window Suggestion

Trimmed by C. H. Smith for the J. H. Ashdown Hardware Co., Calgary.

PRODUCTION OF BARYTES IN CANADA

According to information supplied to HARDWARE AND METAL by the Department of Mines, Ottawa, during recent years the only barytes deposit worked in Canada is one at Lake Ainslie, Inverness county, N.S., (Post Office, Scotsville), owned by Barytes Limited, of Halifax, N.S. Another deposit which may become a producer, is located on Mining Claim R. S. O. 216, Langmuir Tp., near Porcupine, Ontario.

Shipments of ground barytes in 1915 are reported as 550 tons, valued at $6,875, as compared with 612 tons, valued at $6,169 in 1914. During the last five years practically all the Canadian production has found a domestic market.

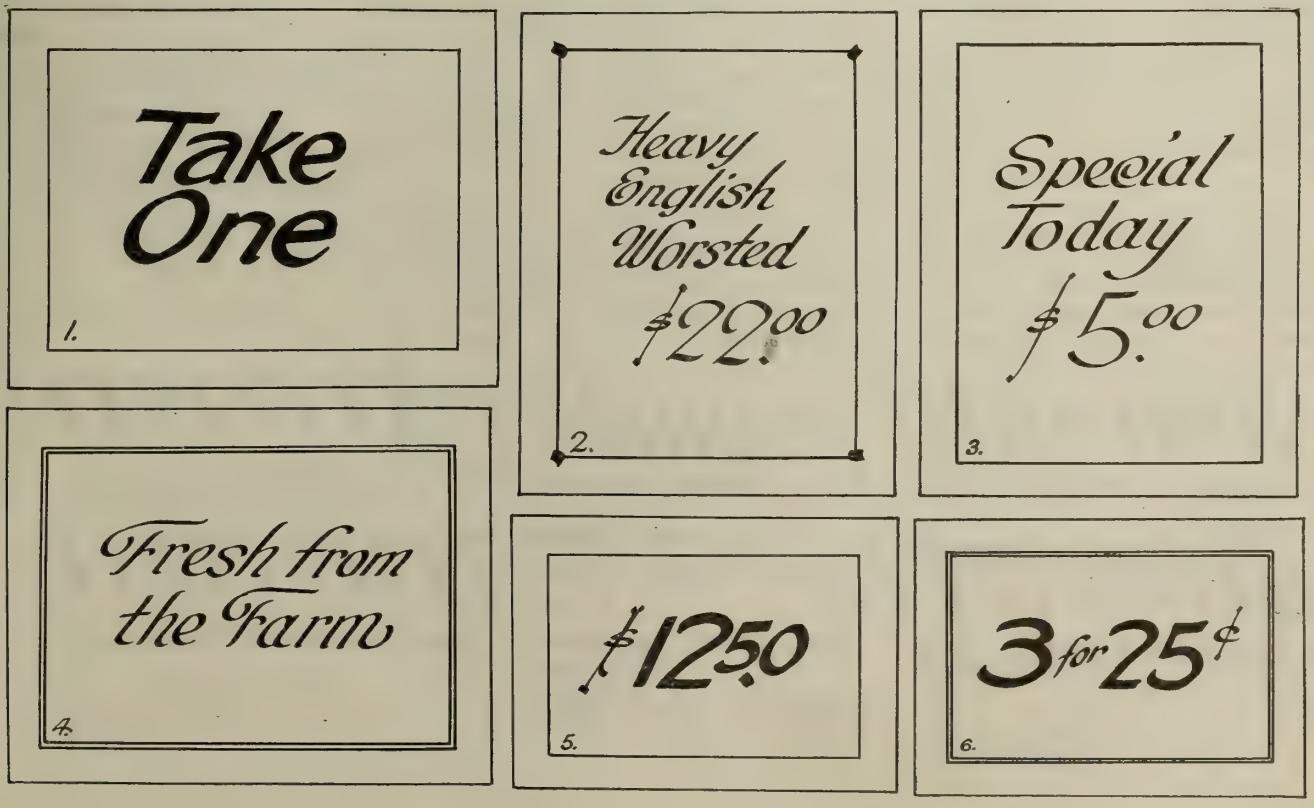
Imports of barytes have not been separately shown in the Customs Department classification since 1890, but certain barium compounds are specifically mentioned. Imports of barium peroxide for the manufacture of hydrogen peroxide for the last nine months of 1913 were 26 tons, valued at $3,600; for 1914, 42 tons, valued at $5,722, and for 1915, 18 tons, valued at $5,250. Imports of blanc fixe (artificial sulphate of barium) and satin white again showed an increase, being 2,746 tons, valued at $59,471, as compared with 1,854 tons, valued at $39,849 in 1914.

CARDWRITING MADE EASY

by

R. T. D. Edwards

Lesson No. 23.



A SERIES of articles on show card writing have been appearing in this paper for about two years, and those who have followed them faithfully have learned many of the letter formations and the various devices used by cardwriters in order to get the desired effect. These have been explained and illustrated to such an extent that, if the student has been diligent with brush and pen, and mastered each lesson, or the majority of them, he should be able to accomplish much in the art of show card writing.

However, there is something more to be learned. Something that has heretofore been avoided for a good reason. In the present day retail business, everything must move fast in order to keep up with competition. Every member of the staff feels the strain of speed. The window trimmer must get his window trimmed quickly and his blinds up as soon as, or sooner than, his competitor, the ad. man is called upon to write larger and brainier advertisements, and the card writer must write more and better showcards. It is to aid the cardwriter to have better speed, so he may meet the demand of modern retail merchandising that this lesson is written.

It is an old adage in card writing that a person can do just so many cards and no more, in a certain length of time. This is true if you use a finished letter, but in the rush season the more particular styles can be avoided, and a much quicker and simpler form of lettering used. If the card is neat and well balanced, that is all that is required. It should always be remembered that it is far better to have a plainly lettered card on the merchandise doing its silent selling than a perfectly lettered card on your desk half finished. The former is getting the business, while the latter will likely be too late to do any effective work. So it is advisable that all cardwriters possess the knowledge of a quickly formed alphabet and numerals and to have these at his fingertips ready to be used at a moment's notice.

Between Christmas and the New Year there is always a rush time for the cardwriter. Christmas cards must come down and be replaced by others. January sale cards must be written and all this within the short space of a week. So now is a good time to get this fast type of lettering "down pat."

The styles that are most advisable for this fast form of lettering are shown in the chart of this lesson. It will be noticed the first alphabet is almost a slant block letter. It can be made very quickly and completed with the brush stroke method. The ends of the strokes are unfinished. It might be well to state here, that all quickly formed alphabets are made with strokes, the ends of which do not need retouching, as that is where the speed comes in. The second alphabet is one of the speediest types that can be made. Such an easy swing of the

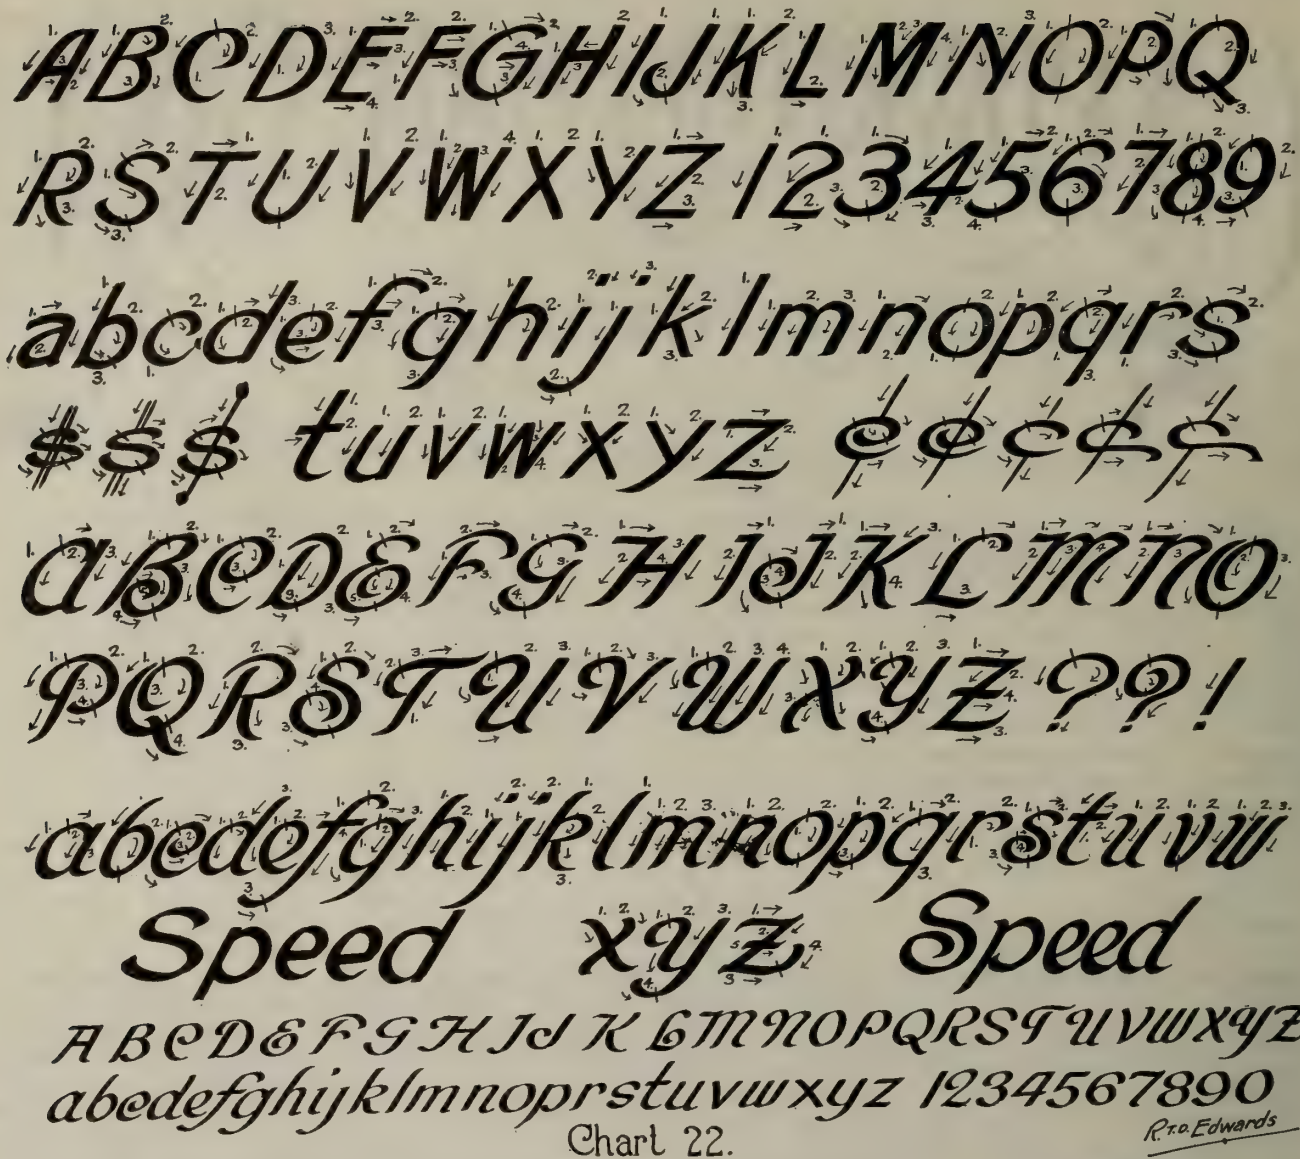


Chart 22.

R. T. O. Edwards

brush is obtained with practice that it may be formed almost as quickly as ordinary writing. In this alphabet there will be noticed more curved lines than in the former. These give more of a swing to the brush and this develops greater speed.

The size of the brush used for this work depends entirely upon the size of the cards required. All brushes do not make the same width of a stroke, even if they are the same number. The width of the stroke depends largely upon the thickness and quantity of the ink carried in the brush. A brush making about a three-sixteenth of an inch stroke can be used for nearly all large card purposes. Another thing of importance is to have the ink slightly thinner than when used for slower work. The faster one works the faster the ink has to flow, therefore the necessity.

But, after all is said and done, practice is the main thing, and one must keep on practising if they wish to accomplish, with any degree of success, the desired result.

THE CHART

First Alphabet

Take particular note that while the formation of these letters and numerals resembles the square faced brush stroke block published some time ago in this paper, it differs in the method of handling the brush. It is necessary to allow the brush to roll in the fingers a very little bit for making the straight horizontal lines, but for all other strokes hold the brush tightly.

The second alphabet is one that can be formed very rapidly. The greater

Stroke 1, Upper Case "A" (First Alphabet) Stroke 3, Lower Case "G" (First Alphabet) Strokes 1. and 2. Upper Case "L" (Second Alphabet)

Strokes 1 and 2, Upper Case "V" and "W" (Second Alphabet) Strokes 2. and 3. Upper Case "T." (Second Alphabet) Stroke 4. Upper Case "M" (Second Alphabet)

Practice Exercises

Fig. 2.

speed is attributed to the curved nature of the lines, which gives a writing swing to the brush. All upper case letters of this alphabet should not be used to form words. Use a combination of the upper and lower.

A detailed explanation of the first alphabet is unnecessary on account of the sameness of the formation. But the second requires explanation.

"A" is formed with three strokes. Nos. 1 and 2 combination should be practised often, "B" is a five-stroke letter. See that the lower section of this letter is larger than the top. Much practice is required for this letter. Stroke one appears many times throughout the alphabet. "C" can be quickly formed. Note how graceful this letter is.

It takes three strokes to complete "D." Practice stroke two often.

"E" is another graceful letter. Note the swing of the three bottom strokes.

Stroke 2 of "F" needs much practice.

This "G" makes a good capital letter, but must be practised often to get it perfectly formed.

Strokes 2 and 3 of "H" should have the same swing to them. Stroke 1 follows the upper guide line.

Strokes 1 and 2 of "J" are the same as those of "I." Strokes 3 and 4 appear many times throughout the alphabet and need much practice.

Strokes 1 and 2 of "K" are also the same as those of "I" and "J." Note the curve on stroke 4. Combination stroke 1 and 2 of "L" are good ones to practice.

Stroke 3 and 4 of "M" show something new. Both these strokes start at the top to the left and come across to the right and turn sharply down to the lower guide line.

Stroke 3 of "N" is the same.

"O" is made with three strokes. Note the slant that the entire letter is at. Practice well the stroke of the letter "P."

"Q" is the same formation as that of "O," with stroke 4 added.

"R." Note how the lower end of stroke 3 and the loop above correspond.

The curved lines of the "S" make it a good one for practice work. This letter is used frequently and should be given special attention. Practise strokes 2 and 3 together. This will help you in the formation of other letters.

Stroke 2 of "U" is also a good one to practice on account of its different curves. Stroke 3 is one of the few straight line strokes of this alphabet and even this has a curved finish.

You should not neglect to practice "V." Note the angle strokes 2 and 3 are at.

"W" is also a letter that you will have to practice well before you can make it perfectly. Note the swing of stroke 4.

You do not have to use "X" often, but it is as well to memorize its formation.

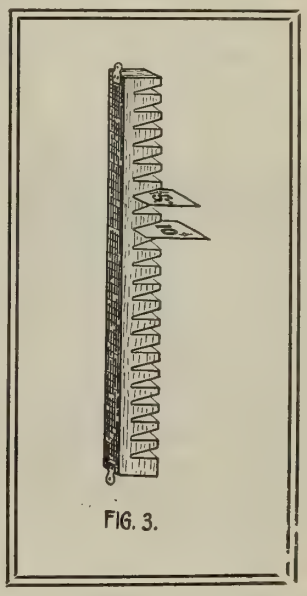
Strokes 3 and 4 of "Y" are good food for practice. Note where stroke 2 joins stroke 3.

It takes 4 strokes to complete "Z." Note that they are all slightly curved. Practise often.

Lower Case

The lower case is one of the best for fast lettering. All the letters, when formed, fit into one another gracefully and can be very quickly executed. The small alphabet at the bottom of the chart shows a good speedy type made with a No. 2 round writing pen.

Small Cards



For small, quickly made cards these alphabets are excellent. Note the collection of cards shown in Fig. 1. In size Nos. 1, 2, 3 and 4 are 7 in. x 5½ in. The remaining two are 5½ x 3½ in. They are very plain cards, being white card, lettered in black. They are of the quickest kind of work. The time taken for the execution being, No. 1, 9 seconds; No. 2, 16 seconds; No. 3, 13 seconds; No. 4, 16 seconds, and each of the remaining two 6 seconds apiece. This time does not include cutting the cardboard or the ruling of the borders. This is just an instance to show what speed can be developed with this form of lettering.

Practice Work

It will be noticed that we continually emphasize the need of continual practice, and that is the only way to obtain success. The "practice exercise" shows a few of the important strokes of the chart. These should be practised many times more than is here illustrated.

Time Saving Device

Many little time saving devices are used by card writers. Fig. 3 shows a good idea for a drying rack for cards after they are written. This can be made from a piece of wood two and a half inches square and about two and a half feet long. The slots are first cut in the width with a saw to two-thirds the depth of the wood. Then the slot

FIG. 3.

is widened at the mouth by another cut in at an angle as shown in the illustration. These slots can be made about an inch apart. Use a wood that will not split. It is best to get a carpenter to make them who has a circular or band saw at his disposal. Brass mirror plates are fastened top and bottom, so that it can be fastened to the wall. Three or four of these within easy reach of the card writer's desk are a great aid to getting out work quickly.

The finished cards shown are not intended for masterpieces, but quickly lettered quarter sheet cards.

It is a good idea to have a lot of the different size cards ready ruled with narrow borders such as these are ruled. It is a great time saver when you are busy.

BANDS ON WILD DUCKS

Hunters who kill or capture any wild duck having an aluminum band around one leg, with a number on one side and a request on the other that the department of agriculture or biological survey be notified, are urged by the United States Department of Agriculture to send the band at once to Washington with a statement as to the date, place and circumstances under which the bird was taken. An attempt is being made to determine the routes of migration of wild ducks and the longevity of individuals. The bands are being attached to numbers of ducks that have been cured of the duck sickness prevalent around the Great Salt Lake, Utah.

HARDWARE & METAL
CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, DECEMBER 9, 1916 No. 50

THE DEUTSCHLAND is carrying back nickel and 1,000 tons of gold, silver and rubber for the starving women and children of Germany.

* * *

HENRY FORD says he wants to do the greatest good for the greatest number. Well, he might knock another hundred off the price.

* * *

THIS high cost of living talk is very wild and unpractical. If anything is to be accomplished it will be done by going at the question in a business-like way.

* * *

FOUR lives were lost last week by fire, caused it is said by gasoline being sold instead of coal oil. Several cases of this kind have come to light during the past two years. Occurrences of this kind should be thoroughly investigated, and if the seller is found guilty of carelessness, a stiff penalty should be imposed. If the law in its present form does not cover cases of this kind, it should be altered.

THE ALL IMPORTANT PROBLEM OF STOCK-TAKING

THE importance of stock-taking will be magnified this year by the conditions which retailers have faced during the past eighteen months and more particularly during the past year. The rapid advance in the prices of practically all lines carried by the hardwareman has raised problems that must now be faced. It has meant the sinking of more capital into the business, the complete revising of cost sheets, the adjustment of selling prices. In fact, it has created a situation which now comes to a focus when the hardwareman faces the necessity of balancing his books for the year, and arriving at a correct estimate of his assets and liabilities.

Some very difficult and intricate problems must be solved during the stock-taking process. Goods are now carried in stock that were bought when wholesale prices were down. Should they be entered in the inventory at the actual cost or at the wholesale price as advanced since? This, the most pressing, is only one of the angles of the situation as it stands to-day.

Recognizing that this is the most pressing problem at the present time HARDWARE AND METAL is conducting an extensive investigation of the problem and a series of articles will be presented. The first appears in this issue; and succeeding numbers will contain articles and letters from prominent men, constituting in all a thorough discussion of the problem.

It is hoped that readers, who have information that would be interesting to other merchants, will send it in. Communications on the subject will be heartily welcomed.

THE POLITICAL UPHEAVAL IN BRITAIN

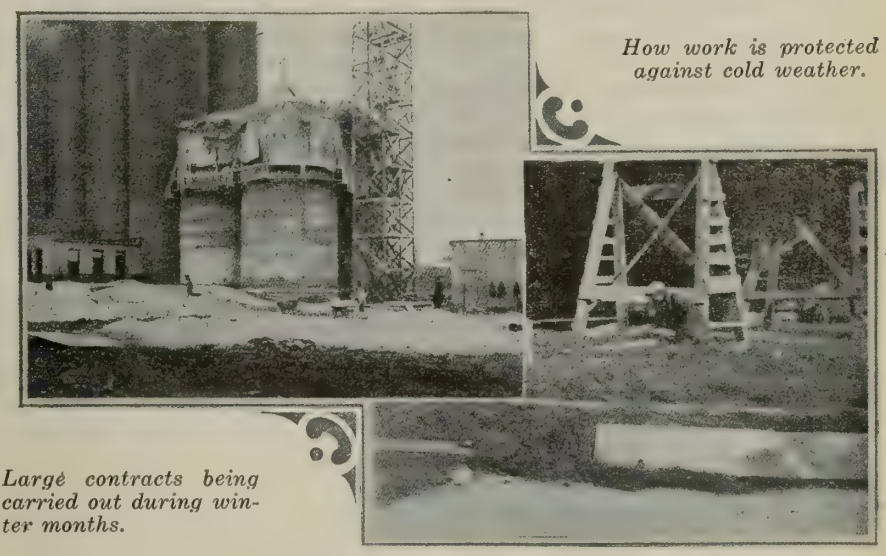
IT IS only since the war began that Canada's interest in British politics has become more than that of the onlooker. Always fascinating and engrossing to Canadians, the political struggles of the Mother Land had yet no direct bearing on our own affairs. Our autonomy has been so absolute that developments there have not affected us directly; and there has been no continuity of party lines between Mother Country and Canada. Since the war, however, all this has changed. On the British Government devolves the successful "carrying on" of the war. Canada's future depends on the outcome of the struggle. Our soldiers are pouring out their blood on the plains of Flanders and we are mortgaging our future to pay our share of the war expense. Consequently we have a very vital interest in the political activities of the Mother Land; and the upheaval which has removed Mr. Asquith from the Premiership is quite as important to Canadians as anything that might happen in the domestic arena.

At time of writing it is uncertain on what lines the reconstruction will be effected, but it seems positive that, no matter whether the mantle of Elijah falls on the shoulders of our own Bonar Law or on Lloyd-George, the latter will be the dominant factor in the handling of matters pertaining to the war. It is the opinion of HARDWARE AND METAL, speaking to business men, that the change will effect an improvement. Asquith is a peerless parliamentarian, staunch, courageous, cool and extremely able. But his record of service is long and with time has come a proneness to deliberation and a seeming reluctance to change. A splendid leader in times of peace, he has lacked in a degree the ruthlessness and vigor that make a great war leader. Lloyd-George has shown evidences of a burning determination to win at all stages of the wonderful part he has borne so far in the struggle. He stands prepared to trample tradition in the dust, to override established ideas, to act *quickly* in all emergencies. Canada will look to him to achieve great results if paramount power now passes into his hands.

After all, our interest in the British political situation is a business one. We have staked everything in the struggle—our national credit, our rich heritage, our very existence. Our interest in the outcome is that of the man who has invested his all in one enterprise. He watches the work of his directors with an undivided attention. The best war director is not an adroit politician necessarily. He must be an organizer a man of action and driving force. Such is Lloyd-George on his past record; and Canada places big hopes in him.

Using Cement in Cold Weather

Satisfactory Results Can Now Be Obtained—Sales of Cement Can be Increased if Dealer Takes Advantage of the Situation to Sell to Contractors and Particularly to Farmers



THE fact that cold weather has been considered a deterrent to the use of cement, has resulted in the restriction of the hardwareman's sales of cement during the winter months. In fact, business has practically stopped with the late fall not to be resumed until the opening of spring permitted the resumption of active building operations.

There is no reason, however, why this condition should continue. The idea that building cannot be carried on during the winter months has been gradually giving way before improved engineering methods. The biggest building contracts are now carried along through the whole year. It is a common sight to see ground broken for a new building in the very middle of winter. And, in line with this general advance, methods have been found by which cement and concrete work can be done successfully after cold weather has set in.

This should point the way to a considerable increase in cement business for the hardwareman. It is only during the winter months that the farmer has any time for fixing up things around the place. It is a recognized fact that cement makes the best kind of foundations for barns, hitching posts, water troughs, etc., and that the farmer can handle the work quite satisfactorily himself—provided he has the time. The trouble has been that during the warm weather he has been too busy and that it was generally supposed cement could not be used during the winter. Consequently most farms get along with the old sagging foundation work and rotten wooden troughs that must be replaced ever so often.

The following pointers on how to build with concrete with good results during the cold weather, if brought to the attention of farmer customers, should result in steady sales of cement for the hardwareman.

Concrete work is now carried on almost regardless of season and temperature. This is because the requirements leading to the success of concrete work done when temperatures are low have become so generally known that contractors, cement products manufacturers, farmers, and other users of concrete are now able to do concreting sometimes throughout the year, thus finding profitable employment for time that might otherwise be idle. By observing some simple and easily applied rules for preparing concrete mixtures, then using a few simple means to protect the freshly placed concrete, the resulting work will be just as successful as though carried on during warmer weather. The farmer can keep his farm hands busy during spare time in winter, making concrete fence posts, concrete blocks, small concrete watering troughs and tanks, and laying barn and other interior concrete floors.

How work is protected against cold weather.

Large contracts being carried out during winter months.

Concrete work done when the average temperature is below a certain point may cost a little more than the same kind of work done under the usual summer conditions. On the general run of contracting this cost seldom runs more than 10 per cent. above that of work done in warm weather and frequently not more than 6 per cent.—sometimes even less. Part of this extra expense comes from applying necessary protective measures, and part results from the lower efficiency of workmen through exposure to the cold. Some of the increased cost may be due to the added time necessary for the concrete to harden, which prevents such speedy progress of the work as would be possible in warm weather.

Contractors have found that prospective builders are usually willing to pay any slight extra cost of work done in cold weather for the certainty of having their buildings completed and ready for use at an earlier date.

Effect of Low Temperatures

Heat hastens the hardening of concrete; cold delays it. The effect of cold becomes noticeable in this respect when temperatures fall below 50 degrees Fahrenheit, and becomes more marked as temperatures continue to fall.

The general opinion is that freezing will not injure concrete that has first had an opportunity to harden for at least 43 hours under favorable conditions. If, before early hardening has taken place, concrete is allowed to freeze and thaw at short intervals, it will be damaged to some extent. As a rule, concrete will not show any serious effects from having once been frozen if, after it thaws out, it is not again frozen until early hardening is complete. But it is far better to protect the concrete from freezing for about 48 hours to four or five days, depending upon the degrees of the cold, rather than to expose it to the possibility of freezing. If such protection is given, no injury need be feared when the concrete is finally exposed to freezing temperatures.

Some of the requirements leading to success with concrete work done in cold weather are self-evident when one remembers the conditions under which concrete hardens and gains strength in warm weather. Warmth and moisture are necessary to the proper hardening of concrete. Any means that will cause these two conditions to be present in cold weather, particularly during the period of early hardening, will lead to the success of concrete work done at such times, if all other good practice is also followed.

Heating Materials

If sand and pebbles or broken stone and mixing water are heated, the concrete mixture will be so warmed that more rapid early hardening will take place. Warmth given the concrete from heated materials can readily be held in

it for some time—as long as may be necessary to complete early hardening—if the concrete is placed quickly after mixing and at once protected in some one or more of the several ways that will be described later.

Additional heat is also developed in the concrete mass as a result of changes taking place from the chemical combination of the cement and water. This also helps to keep up the temperature of the freshly placed concrete and thus aids to protect it from freezing. As cement forms only a relatively small bulk of a concrete mixture, it need not be heated, but it should be stored where it will be protected from dampness and extreme cold.

Heating Water

Mixing water is the easiest of the materials to heat. It can readily be heated to 150 degrees Fahrenheit, and kept at this temperature until used, by one of several methods. Two methods are in common use for heating mixing water; one is to use live steam or exhaust steam from a steam boiler, and the other is to heat the water in tanks or kettles over a fire. On large contracting jobs mixing water is usually heated by steam. If a steam engine is used to run the mixer, the exhaust steam is often allowed to discharge into a water tank that is a fixture on the mixer. This arrangement is satisfactory, but does not heat as rapidly as live steam.

Protection to be Given

In the following paragraphs a number of ways of protecting concrete work done in cold weather will be described. Usually no one of these methods or ways is used alone. Generally two or more of them are combined.

Foundations can easily be protected because the greater portion of the work is in an excavation. Forms or earth walls of the trench give enough protection to the sides of the work if the cold is only moderate. There remains nothing but the top surface to be covered.

Barn and stable floors built during winter should be laid in such sections that a portion of the old floors may be used while concreting is in progress. This is necessary because of the longer time that concrete requires for hardening in cold weather to be safe for use.

For such indoor work little additional protection is needed besides that given by the enclosing structure. Temperature may be kept as desired by oil stoves. Care should be taken, however, to prevent the possibility of fire. This also applies where salamanders or open coke-burning stoves are used to supply heat. It is a wise precaution always to have an attendant on the job as a measure of safety against the spread of fire.

Removing Forms

Although too early removal of forms is to be avoided regardless of season, this statement applies with great force to work done during cold weather. Especially is this true of concrete walls, roofs, and overhead floors which are intended to carry loads other than their own weight. Forms should be left in place until it is absolutely certain that the concrete has become strong enough to be safe. Frozen concrete often has the appearance of thoroughly hardened concrete. If struck with a hammer it will ring just like hardened concrete. The work should be examined carefully before forms are removed. A single section of the forms or part of a section may be removed to expose the concrete, then the flame from a plumber's blow torch, a jet of steam or hot water may be directed against the concrete surface. If merely frozen the heat will thaw the water in the concrete, thus showing the condition of the work.

Separate stoves are best for heating sand and pebbles, although sometimes a pipe stove may be long enough so that sand can be piled at one end and pebbles or broken stone at the other. Care should be used to keep the two materials separate, otherwise when taking them from the pile to proportion a batch of concrete, some batch is likely to be improperly proportioned because of the sand and pebbles having become mixed before measuring.

Heating sand and pebbles or broken stone by steam has advantages over other ways. They may be piled directly on steam-heated pipe coils or the piles may be covered with tarpaulins and steam applied directly to the materials. The tarpaulins act to house in the piles and thus to hold the heat. With a steady supply of steam this method of heating is quite effective. The pipes used are closed at one end and perforated along their lower side by numbers of very small holes. The other end of the pipe is connected to the source of steam supply by means of steam hose. The pipes are then stuck into the piles of materials and steam turned on.

While cold weather concreting is in progress, piles of sand and pebbles or broken stone exposed to the weather should be kept covered with tarpaulins water-soaked and possibly frozen solid if the temperature should drop suddenly.

After forms have been cleaned of ice, snow and any particules of frozen concrete, and have been warmed, the concrete mixture should be placed immediately so that none of the warmth given to it by the heated materials will be lost. All of the work should be done quickly.

Thin floor slabs, beams, columns, sidewalks, feeding floors, barnyard pavements and similar classes of work, have a large surface area compared with their volume; therefore, more careful protection must be given to such work than to foundations, abutments and other mass construction where the excavation or the bulk of the mass and heavy forms give part of the required protection. Floors are usually protected by a covering of hay or straw. Building paper or canvas should first be laid over the concrete, then from 6 to 12 inches of straw, depending upon the temperature to be protected against. If the work is out of doors the covering should be weighted down with short boards to prevent it from being blown away. Sidewalks, feeding floors and similar outdoor pavements must receive extra care. Sometimes walks in business districts are housed in by means of a canvas-covered frame and the enclosure kept warm by steam or open coke-burning stove pots, commonly spoken of as salamanders. When forms are tight and made of heavy material, mass work may require no other protection than covering the concrete exposed at the top. This protection can be given by a layer of hay or straw, while vertical faces may be given additional protection besides that given by the forms by building a rough lattice work of strips 10 or 12 inches from the outside face of forms and filling in between lattice and forms with straw or manure. Such extreme measures are usually required only when the cold is very severe.

If manure is used as a covering, it should never be placed directly upon the fresh concrete. It is not only likely to stain the work, but may injure the surface by causing a slight pitting or scaling. This is probably due to the fact that sometimes nitric acid is formed when the manure rots and this chemical is probably the substance that has caused injury to concrete surfaces protected by manure covering, in those cases observed in the past.

Cold Weather Concrete Work On the Farm

There is much concrete work on the farm that may be carried on during cold weather. Farm hands may thus be kept at work when they might otherwise be

(Continued on page 32.)

Commodious homes built of cement.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

ALL signs now point to continued advances in the prices of hardware commodities made of iron and steel. The heavy budget of price changes in the markets this week is simply a repetition of what has been occurring week after week for many months past. Precedents count for nothing. Previous high record prices on many lines look cheap when compared with prices prevailing today—and the worst is yet to come. The changes this week include enamelware, tinware, boilers, radiators, saws, files, lawn swings, lawn seats, spelter, lead, malleable fittings, asbestos paper, rules, cow ties, churns, netting staples, bar iron, leather soles and heels, steel, sand and emery paper and cloth, fishing tackle, seine twine, galvanized sheets and many other lines. Still higher prices may be expected soon on iron pipe, scoops and shovels, galvanized and black sheets, lead products, stoves, lawn mowers, white lead in oil, wire nails and fence. Prices on pig-iron are withdrawn. Ingot metals are all firm with advances noted on lead and spelter. Despite the high prices, business is good, and the outlook for Christmas trade in most districts is excellent. All paint products are firm at the advanced prices noted last week.

MONTREAL MARKETS

MONTREAL, Dec. 6.—Formidable firmness persists in iron and steel. All hardware, the production of which is based on iron, must infallibly go up in price greatly unless conditions vastly alter, and alter very quickly. Many lines are already up. There is a hint that stoves may be increased in price shortly. A new list has been issued for many lines of enamelware, tinware, etc., and marked advances are shown in many cases. Copper goods show an increase in this list. Copper is in very firm market. Lead is firmer this week. Predictions are out in the trade that many lines of tool steel goods are on the climb again, and that pipe may go up. It is a tale all round of soaring prices, unprecedented in the trade, or in the experience of the world, and as one hardware man of great experience and widely respected in the trade remarks, probably never to occur again if the present war is to do its work thoroughly.

Iron and Steel Outlook Serious

IRON AND STEEL.—The outlook in iron and steel is more tremendously formidable than ever as regards prospects for higher prices. Predictions were being made in serious circles in Montreal that pig iron may reach $50 per ton in the States during the coming year. At present pig iron is at $35 a ton over there. This would mean that all commodities in the hardware and metal trade generally dependent on pig iron for their production must go vastly higher still. Huge orders by railway companies are occupying the mills now, and it becomes practically impossible to get acceptance of orders for the ordinary run of needs in the steel and iron line. Mills politely notify inquirers that they are booked up for the time being, but will be glad to consider later. Many lines involving iron and steel in their production are advanced this week, as will be noted.

Bar Iron and Steel Up

Bar iron and steel are all up this week. Bar iron is now $3.30 to $3.35 per 100 lbs.; machinery steel (iron finished) is $4.10; sleigh shoe steel, $4.05, and oval sleigh shoe steel, $4.50. Tire steel is at $4.25 per 100 lbs.; mild steel, $4.05; and band steel, $4.35. Toe calk steel is $4.90 to $4.95 per 100 lbs. Refined iron is quoted at $3.55 per 100, also horseshoe iron, the same price, $3.55 per 100 lbs.

New Pipe Prices Soon Again

A warning is heard in trade circles that further new iron pipe prices may be expected, owing to the iron market conditions.

Pipe Fittings Up

Pipe fittings are advanced. Malleable and cast bushings are at 50 off now; flanges are at 52½ off; plugs, 47½ off; nipples under 4 inches, 70 off, over 4 inches, 65 off; flanged unions, 40 off; malleable unions, 52½ off; and pound goods, 15 off.

Galvanized Sheets Scarce

There is great scarcity of galvanized sheets and corresponding firmness of price. Mills are refusing to accept orders for these. New prices are quoted on Queen's Head galvanized sheets as follows:—28-gauge, $8.25 to $9; 26-gauge, $8 to $8.75; 22-24-gauge, $7.75 to $8.50; and 16-20-gauge, $8.30. There is a reduction of 25c for case lots of 100 sheets. Probabilities are against the lower prices quoted above being maintained for very long. They are subject to change without notification from day to day, even from hour to hour.

Canada Plates Shortage

Still the great shortage of Canada plates exists, and will probably exist, for it is reported that the manufacturers of these are going in for other lines which show greater profit, rather than making the former supplies, and the chances of any new firms entering the field to help out seem slim. Orders for Canada plates go roaming all over Montreal seeking a welcome and finding none.

Shelf Goods Show Further Increases

SHELF GOODS.—Amongst the recent advances in shelf goods nearly all lines familiar to the hardware trade have had their share. This week some other well known lines appear.

Disston Saws and Files Up

All Disston goods, saws, files, and other lines, are up on an average 5 per cent.

Shurley & Dietrich Saws Also

Shurley & Dietrich saws have also been increased by about the same percentage.

Globe Files Increased

An increase in the form of a new discount of 57½ per cent. is recorded in Globe files this week.

Sandpaper and Emery Cloth

Sandpaper (B. & A.) and emery cloth and paper of the same brand are all up.

the discount now being 12½ per cent. This was recently predicted in HARDWARE AND METAL.

Globe Valves Up

Jenkins' genuine globe valves are up in price, being now 20 per cent. off.

New Prices On Axes

There is a prediction sounded in trade circles that new prices on axes may be expected shortly. (More of the influence of the iron and steel market condition.)

Single Loop Ties Up

Single loop bale ties are up in price this week, prices quoted being f.o.b. Hamilton, Toronto, and Montreal (freight equalized): No. 12, $5 net; 13, $5.10; 13½, $5.15; 14, $5.25; 15, $5.45, and 16, $5.70.

Shovels and Scoops to Rise

An increase is expected in shovels and scoops, but the announcement may still be distant.

Fishing Tackle Also

An increase in fishing tackle is predicted also before long.

Cotton Seine Twine Up

A further advance is noted in cotton Seine twine. No. 6 is now 47½c a pound; No. 9, 42c; No. 12, 41c.; Nos. 15-36, 40½c; Nos. 42-100 are 40c.

Paint Advance Noted

The *Hardware Trade* notes the advance of 20c per gallon and other scales of advance in mixed paints (reported last week in paint makets of HARDWARE AND METAL).

May Expect Higher Prices for Stoves

STOVES.—While the usual winter demand for stoves and their accompanying lines of hardware is fully begun, a period of mild moist weather in Montreal has rather retarded the call for these. Nevertheless the extreme firmness of the iron market is having its effect on conditions. Many small foundries in small centres which used to handle district trade are dropping certain lines, and sometimes perhaps more than a few lines owing to the great difficulty of getting materials and labor, and the orders are being diverted into the hands of the larger firms manufacturing stoves, etc. The shortage of Canada plate is felt in the manufacture of stovepipe and elbows, and new prices on stovepipes show list plus 10 per cent. Advances may be looked for in stoves owing to the tremendously firm conditions in the iron and steel market.

Lead Keeps High In Metal Market

METALS.—In regard to the ingot and other metals, the metal showing most firmness this week (after iron) is lead. Lead is in very strong market, and is scarce at that. Prices are up 50c per 100 lbs. over last week, and are now $10.50 to $10.75. Tin is slightly weaker—about 50c down, at $49 and $49.50 per 100 lbs. Sheet zinc is firm at last week's prices (25 and 25½c a pound). Spelter is unchanged at $14.50 to $15. Antimony is a shade firmer, now at 17c a pound. Tinsmiths' and wiping solder are still at 31c and 29c per lb. respectively. Copper is strong and unchanged at $39.50 to $40.

TORONTO MARKETS

TORONTO, Dec. 8.—The week has been one of numerous price changes, all of which are in the upward direction. Trade in nearly all hardware lines is good. The embargo on shipments in less than car lots coming into Toronto has been raised by both the C. P. R. and G. T. R., and wholesalers are now able to get their goods forward in better time. There is still an embargo on certain outside points, but these are not ascertainable until the wholesaler comes to ship goods there. It all depends on the local conditions at outside points for the handling of freight. In this respect some wholesalers have better fortune than others, according to the place they happen to have orders from. There is a continued firmness in all iron and steel products, and this is making itself manifest in the generally upward tendency in many hardware lines.

NEW DISCOUNTS ON ENAMELWARE, TINWARE, ETC.

The following changes in discounts took place on Wednesday of this week:
Scotch Grey Ware—60%.
Imperial Ware—30 and 20%.
Canada Ware—25%.
White Ware—50 and 17½%.
Japanned Ware—List.
Japanned Ware, White—List, plus 10%.
Plain and Jap. Sprinklers—List, plus 5%.
Stamped Ware, Plain—50 and 15%.
Stamped Ware, Retinned—50 and 10%.
Copper Bottoms—List, plus 10%.
Tinners' Trimmings, Plain—50 and 15%.
Tinners' Trimmings, Retinned—50 and 10%.
Tinners' Trimmings, Gen.—5%.
Milk Can Trimmings—List, plus 30%.
Cream Cans, Railroad—5%.
Factory Milk Cans—List, plus 10%.
Railroad Delivery Milk Cans—12½%.
Pieced Ware, C.B.—List, plus 30%.
Pieced Ware, Ordinary—List, plus 12½%.
Sheet Iron Wares—7½%.
Fry Pans—50 and 10%.
Spiders—30 and 10%.
Fire Shovels—10%.
Steel Sinks, Painted—10%.
Steel Sinks, Galvanized—5%.
Light Galv. Pails and Tubs—List, plus 10%.
Heavy Galv. Pails and Tubs—List.
Garbage Pails—List.
Balance Galv. Goods—List plus 10%.
Japanned Coal Hods—List, plus 7½%.
Galvanized Coal Hods—List, plus [illegible]%.
Paper Lined Boards—50 and 5%.
Wood Lined Boards—40 and 12½%.
Elbows—2½%.
Elbows, Galvanized—List, plus 12½%.
Elbows, Light, 5" and 6"—$1.70.
Elbows, Light, 7"—$1.85.
Stove and other Pipes—List, plus 10%.
Stove Pipe Thimbles—50 and 10%.
Copper Boilers—List, plus 10%.
Copper Tea Kettles—List, plus 10%.
Copper Tea Kettles, in 3 doz. lots—List.
Copper Tea and Coffee Pots—List, plus 10%.
Copper Tea and Coffee Pots, in 3 doz. lots—List.
Plain Copper—No change.

Poultry Netting Staples Advance Still Higher

STAPLES.—Advances have been recorded in the price of poultry netting staples during the week, the market following upward in sympathy with the advances recently put into effect in other wire products. There is a considerable range of prices, ranging from $7.35 for galvanized in 100-lb. kegs to $8.45 per 100 pounds in kegs. In 10-lb. boxes the price is 80c higher per 100 pounds, or a range of $8.15 to $9.25. In 25-lb. boxes the price is 40c higher than kegs, and in 50-lb. boxes 30c higher than 100-lb. kegs. Bright poultry netting staples are $1.10 less than the galvanized.

Enamelware and Tinware Advances in Price

ENAMELWARE.—There is another advance in enamelware, japanned ware, galvanized ware, stamped ware and copper and nickel ware. Quite general advances were recorded in these lines about three weeks ago. In the face of the demand and the scarcity of raw materials, together with the difficulty in getting adequate labor supplies, conditions have been such as to put still greater strength into the market. This week's advances are given in a panel elsewhere.

Malleable Fittings and Bushings Are Up

FITTINGS.—New discounts have been named by wholesalers on malleable fittings, malleable bushings, cast bushings, unions and plugs. The new discounts provide for substantial increases. On malleable fittings the discount is now 10 per cent., on malleable bushings 50 and 2½ per cent., on cast bushings 52½ per cent. Unions now carry a discount of 55 and 2½ per cent., and for plugs the discount is 50 per cent. These advances follow the firmness in all iron and steel products.

Files Make Substantial Advance During Week

FILES.—An advance was recorded in all makes of files during the week, which makes the increased prices considerable. For the Kearney & Foot, Great Western,

J. Barton Smith, Disston, McClellan, Globe and Vulcan the new discount is now 60 and 2½ per cent. off list, as compared with 65 per cent. formerly. In one instance the Kearney & Foot discount is 57½ per cent. off list, while the Globe and Vulcan are also 57½ per cent. Nicholson and Black Diamond remain unchanged at 50 per cent. off list. On Delta files the discount is 47½ per cent. An advance in files was made several weeks ago.

Hand Saws Have Gone Up 10 Per Cent.

SAWS.—An advance of approximately 10 per cent. on all grades of saws has been made during the week. On the D grade of hand saws the following prices now prevail:—8 x 18-inch, $20.80; 8 x 20-inch, $23.30; 8 x 22-inch, $25.60; 8 x 24-inch, $27.50; 8 x 26-inch, $28.80; 8 x 28-inch, $32.65. The increased price of saws has been in an upward direction in conformity with the higher prices for steel and the advance in other raw materials.

Discount on Barrel Churns is Changed

CHURNS.—The discounts on all makes of churns has been changed, which provides for a 10 per cent. increase approximately. Lines included are the Cummer-Dowswell, Beatty Bros., and Maxwell's. For Toronto, Hamilton, Fergus, London and St. Mary's, the discount is now 30 per cent. f.o.b., as compared with 35 per cent. formerly. For Montreal, Ottawa, and Kingston f.o.b. the discount is 27½ per cent., as compared with 32½ per cent. formerly. At St. John, N.B., f.o.b., the discount is 25 per cent List prices may be obtained by reference to the current quotations.

Threatened Scarcity in Asbestos Sheeting

ASBESTOS SHEETING.—A peculiar condition has arisen in the market for asbestos sheeting, and as a result a wide range of prices is being quoted for the commodity. The manufacturers of asbestos building paper, located in Quebec, it is stated, have decided to discontinue the manufacture of this line. Owing to an embargo having been placed on shipping to the United States and the inability to get ships to carry the goods to other British possessions, the manufacturers assert they have been unable to manufacture economically, the Canadian market not being large enough to keep their factory in operation. For this reason an acute condition has arisen locally, and asbestos sheeting in one instance sold as high as $15 per 100 pounds. The range of prices, however, was quoted down to $6. Some dealers assert that stocks could possibly be brought in from the United States, but with duty and freight it would be necessary to sell the goods from $8 to $8.50 per 100 pounds. There is a somewhat chaotic state in the market for this commodity at the present time, prices being governed largely by the amount of stocks jobbers have on hand at the present time.

Curry Combs Make Considerable Advance

CURRY COMBS.—An advance of over 15 per cent. was made in the price of curry combs during the week. They are now selling at net list, as compared with a discount of 15 per off list formerly. The advance is in conformity with the firm market in all steel and iron products.

Single Barrel Shot Guns Are Up 50c Each

GUNS. — Manufacturers have increased their prices on single barrel shotguns and the prevailing quotation is now in the neighborhood of $6.50 each. This represents an advance of 50c per gun. Dealers state that gun sales have been good during the year, and attribute it to the fact that a war condition prevails, and that many returned soldiers take to hunting as a pastime on their return.

WROUGHT PIPE UP 5 PER CENT.

While HARDWARE AND METAL was about to go on the press, word was received of an advance in the price of lapweld and buttweld pipe. The advance is about 5 per cent., and amounts to $4 per ton on buttweld and $6 per ton on lapweld. Net lists had not yet been issued at the time of writing. This advance follows an upward trend in wrought pipe in the United States markets. There is a firmness in the market for all wrought pipe products. Prices shown in current quotations are, therefore, withdrawn.

Black and Galvanized Sheets Are Very Firm

SHEETS.—There is a continued firmness in both black and galvanized sheets, with advances recorded locally in many instances, according to the condition of the stocks of the dealers. On the galvanized sheets the Apollo brand has advanced 20c on the 16-gauge, 35c on the 18 to 20-gauge, 45c on 22 to 24-gauge, 40c on 26-gauge, 35c on 28-gauge, and 50c on 10¾ oz. The new quotations are given in the current quotations. In some instances further advances are contemplated in the near future. In black sheets there has been a corresponding advance. Prices on these may be seen by reference to current quotations.

Lead and Waste Pipe Advance 1c Per Pound

LEAD PIPE.—An advance of 1c per pound has been recorded on the price of lead pipe and lead waste pipe during the week. Lead pipe is now selling at 14c per pound and lead waste pipe at 15c per pound. The discounts on lead traps and bends has also been changed, which provides for a substantial increase in price. These are now sold at net list, as compared with 10 per cent. formerly. Lead wool has advanced 1c per pound also, and is now quoted at 12c per pound. There has been no advance in lead sheets as yet, the 3-lb. and 3½-lb. being quoted at 11¾c per pound and the 4 to 6-lb. at 11½c.

Cow Ties Register Advance in Price

COW TIES.—New discounts have been announced on cow ties, which provide for a considerable increase in the selling price. Open ring and closed ring are now quoted at 32½ per cent. off list, while the three-chain and four-chain are also selling at the same discount of 32½ per cent. off list. Stall fixture bars are now quoted at a discount of 25 per cent., as compared with 35 per cent. formerly.

Manufacturers Advance All Tubular Rivets

RIVETS. — The manufacturers of tubular rivets have advanced the price of their product to the jobbers and other dealers by changing the discount from 20 per cent. to 15 per cent. All classes of tubular rivets are affected in the iron rivets; coppered and tinned. Escutcheon pins and bifurcated rivets are holding steady in a firm market, with no guarantee that present prices will prevail for any length of time.

Oil Storage Tanks Make Big Advances

OIL TANKS.—The Imperial Oil Company has advanced their price on their various types of oil storage tanks and pumps. They are now quoted 18 per cent. higher in the case of the pumps and 23 per cent. higher for tanks over their recent quotations. The demand for these systems is reported exceptionally good; sales this year were stated to be 50 per cent. in advance of the sales for last year. Many hardware stores and general stores have installed systems of various kinds, the heaviest run being on the gasoline systems for the accommodation of motorists. These storage systems

are looked upon by many merchants as business-getters.

Coal Oil Goes Up 1 Cent Per Gallon

COAL OIL.—Owing to the firmness in the crude oil market there has been an advance in the price of coal oil by the various refiners. In the City of Toronto the advance amounts to ½c per gallon, while at outside points the advance is 1c per gallon. In the Pennsylvania oil fields the crude oil advanced 15c per barrel on December 5, and is now selling at $2.75 per barrel, the highest price ever reached in the history of the oil industry. Other grades of crude oil were also advanced. Gasoline has not been advanced, however; a steadying factor in the market at the present time is due to the fact that consumption has decreased considerably at this time of the year. If the advance in crude oil had taken place at a time when consumption by motorists is heavier than it is in winter months gasoline would in all probability follow. The consumption of coal oil is necessarily heaviest during the winter months. New prices will be found in the current quotations.

Steel Products and Pipe Are Very Firm

STEEL AND IRON.—There is a continued firmness in the steel and iron market, with advances recorded in certain instances. One of the factors operating to keep prices steady is due to the fact that dealers in certain instances are willing to dispose of stocks on hand without advancing to the point where primary market conditions warrant. Angles are in firm market, and in certain instances are quoted up as high as $5 per 100 pounds, with the market for the most part holding around $3.90. Norway iron has advanced 50c during the week, and is now quoted at $7. Tire steel is up 10c per hundred, and mining tool steel is quoted 1c per pound higher at 13. There is great strength to the wrought pipe market, and advances can confidently be looked forward to in this product.

Old Materials Are Bringing Better Prices

OLD MATERIALS.—Advances have taken place in some lines in prices being paid for old materials. Heavy lead pipe can now be sold at 7½c per pound, an advance of 1c over recent quotations. Yellow brass is now quoted at 16c and red brass at 19c per pound. Heavy zinc is also up 1c per pound at 8½c, while heavy copper is quoted up 8c at 28c. Stove plate is now being bought at $11.50 per ton, an advance of 50c. Old rubbers are now quoted at 9¼c, overshoes at 6½c, and automobile tires at 5½c.

Curling Tongs Advance

An advance of approximately 10 per cent. has been made in curling tongs. The new prices for A grade is 90c, for B grade 75c, and for tourist $1.30.

Double-pointed Tacks Up

Double-pointed tacks have registered an advance during the week through the change of discount. They are now quoted at 65 and 10 per cent. off list.

Metal Markets All Show Firmness

High prices have not checked buying of ingot metals, and business is good. The tendency of practically all metals is upwards, more especially metals used in munition making.

COPPER.—The copper market is very strong, and there is a good demand. With practically the entire output of copper sold for some months to come, the position of the metal is an exceedingly strong one. Quotations locally range from 37½ to 39c lb.

TIN.—The local market is unchanged from last week, and there is a good demand. Tin is quoted locally at 48c lb.

SPELTER.—An advance of 1c lb. has taken place locally on spelter, and the market is firm, with a higher tendency. The local price is 15c to 15½c, which is considered very reasonable when compared with prices in the U. S. markets.

LEAD.—The lead market still shows considerable strength, and on Tuesday the Trust advanced prices to the levels which have been quoted by the independents for some time past. The advance of $10 a ton by the Trust has encouraged the independents to quote even higher prices. Lead is up ¼c lb. locally, and is quoted at 9½c lb.

ANTIMONY.—The market is quiet and unchanged at 18c lb.

Pig-Iron Prices Are Withdrawn

PIG IRON.—Prices of domestic pig iron have been withdrawn. One large Toronto firm tried to place orders this week for six months ahead and were unable to do so. Although small orders for immediate acceptance were taken at $32, the seller would not take orders for future, although it is said $40 was offered.

The industrial situation continues to show steady improvement, due for the most part to substantial war orders, which are increasing in volume as the manufacturers become more familiar with the class of goods required, and are able to develop their output. Scarcity of labor and raw materials, however, is restricting capacity production, and the situation in this respect is not showing much indication of any marked improvement. The tendency, unfortunately, is rather the reverse, and it is a difficult problem to solve. Exception, however, may be made in regard to the production of munitions, where the greatest effort is being made to increase the output owing to urgent requirements of the situation. Production of munitions during the past few months has shown a substantial improvement, and the industry is on a far more efficient basis than was formerly the case.

Lawn Swings and Seats Advance

Manufacturers of lawn swings and seats, etc., have advanced all prices, and new lists will be issued within the next few days. Prices will show considerable advances owing to increased costs of all materials, labor, etc.

Radiators and Boilers Are Higher

Manufacturers of radiators and boilers have advanced prices of all lines owing to increased costs of all materials and labor. Radiators are now quoted at 20 per cent. off.

LONDON MARKETS

LONDON, Ont., Dec. 7.—There is another heavy list of price changes this week, mostly all in an upward direction. Business continues brisk. All seasonable lines are in good demand. There is a scarcity of many lines in some cases jobbers' stocks are exhausted and no further supplies are in sight. Christmas buying has started and retailers are looking forward to a large volume of trade. Collections are good.

Enamelware and Tinware Move Upwards

The second advance within a month has taken place on many enamelware and tinware lines. The new discounts are shown in a panel elsewhere in this issue.

Rules, Soles and Heels Go Higher

Stanley rules have advanced 10 per cent. and the new net prices on some of the best sellers are per dozen as follows:—

No. 68, $2.10; No. 61, $2.50; No. 51, $2.95; No. 70, $3.30; No. 66½, $5.00; No. 62, $6.65; No. 84, $5.40.

An advance of 25 per cent has been

made on tap soles and hells. New net prices follow:— Ladies soles, No. 37½, $2.70 doz. prs.; boys No. 31½, $3.55 doz. prs.; mens, No. 123, assorted, $4.75 doz. prs.; mens, No. 122, $5 doz. prs.; mens N,o. 122 size 11, $5.75 doz prs.

Bar Iron Advances New Price Issued

IRON.—A new price of $3.60 base has been issued on bar iron. The market is very firm.

Churns Advance

Barrel churns have advanced in price and are now quoted at 30 per cent. off list. The new net prices follows:— No. 0, $6.30 each; No. 1, $6.30; No. 2, $7.00; No. 3, $7.70; No. 4, $9.10; No. 5, $11.20.

Asbestos Paper Up Again

Asbestos paper has again advanced and the new price on asbestos building paper is $8 per 100 lbs.; millboard is quoted at 10c lb. The market is decidedly firm, with prospects of higher prices.

Oiled sheeting has advanced and is now quoted at $2 roll.

Roofing Advances

ROOFING.—Some manufacturers of roofing have advanced prices again and jobbers have made corresponding advances. The advances range from 10 to 20 per cent.

Rivets Go Higher

RIVETS.—The new discount of 30 per cent. on rivets makes the net prices on 5 lb. pkgs. of coppered rivets and burrs as follows:—No. 8 assorted, $1.54 pkg.; No. 10, $1.65 per pkg.

Malleable Fittings Advance

FITTINGS.—New and higher prices have been issued on malleable fittings. Class B and C are now quoted at 10 per cent. off; bushings are quoted at 40-10 per cent.; unions are quoted at 50 per cent.

Nails Firm at Recent Advance

Wire nails are firm at the advanced price of $4.35 base named last week. There is a scarcity of some sizes and a further advance may be expected in the near future. Cut nails are unchanged at $4.

Paint Materials Firm in Price

Linseed Oil Holds Firm

LINSEED OIL.—Although there has been an uncertainty in the market for linseed oil owing to the fluctuations in the seed market, still prices quoted last week have held firm. Under the present conditions the sale is light. Raw linseed oil in 1 to 2 barrel lots in selling at $1.20 per gallon and boiled at $1.23. In 3 to 5-barrel lots the price quoted is $1.19 for raw and $1.22 for boiled. For 6 to 9-barrel lots the quotations are $1.17 for raw and $1.20 for boiled.

Turpentine Firm

Turpentine is firm and unchanged at last week's quotations. Firmness here has followed firmness in the primary markets.

In barrel lots the price quoted is 79c per Imperial gallon; 78c in 2 to 4-barrel lots, and 86c in small lots of 5 gallons. Demand for the commodity has been fair.

White Lead in Oil Firm

WHITE LEAD IN OIL.—Although no price changes have been recorded in the price of white lead in oil, the market is very firm at present quotations. Only the absence of demand holds the price down. In small lots it is quoted at $14.25 per 100 pounds and in ton lots at $13.95 per 100 pounds.

Putty Firm

PUTTY.—The price of putty holds firm at recent quotations of $3.70 per 100 pounds in 100-lb. drums and $3.80 per 100 pounds in 25-lb. drums for the pure. Standard putty is quoted at $3 in 100-lb. drums and $3.10 in 25-lb. drums.

Glass Very Firm

In some quarters there is talk of an impending change in the price of glass. The market is firm. Single diamond is quoted at 20 per cent.; double diamond, 20 per cent. cut lights 50-5 per cent.

Files and Saws Advance

New discounts are out on files and are shown in the current market quotations.

Disston, Shurley & Dietrich and other makes of hand saws have advanced in price. The advances range from 5 to 12½ per cent. A new price is expectel this week on Taylor Forbes lawn mowers and it is expected that an advance of at least 10 per cent. will be announced. Costs of all materials entering into the manufacture of lawn mowers have advanced tremendously and higher prices are inevitable.

WINNIPEG MARKETS

WINNIPEG, Dec. 7—Another week of activity is again noticeable in the various markets and a great variety of lines are once more in for revision. Prominent among these will be noticed wire nails, which are now threatening the $5 mark, barb wire, annealed wire and bale ties, rope, screws, enamelware and the new prices on various lines of hinges mentioned in last week's report.

The new prices issued on hinges certainly represent a big advance, in some cases being 20% higher than formerly quoted. By comparing prices shown below with those prevailing before, retailers can see just to what extent each line is affected. And the end is not in sight unless all available sources of information fail in their predictions. Quotations now being made are on the following basis.

Winnipeg, Dec. 7, 1916.

Business still continues very brisk and jobbers report a good demand for seasonable lines. Good-sized orders are being shipped for Xmas cutlery, including silver-plated flatware, cut glass, casseroles, pocket cutlery, etc., and such seasonable lines as sleighs, coasters, skates, hockey sticks and snowshoes are going out in fair quantities. The mild weather and lack of snow to date are influencing sales of these lines, but a change in weather conditions may be expected nearly any time, which should brighten things up materially.

Hinges Advance; Butts Also Higher

New prices on hinges are as follows:

Corr. Strap Hinges—	—Dozen Pairs— In bulk	In cartons
4″	$1 25	$1 80
5″	1 75	2 90
6″	2 40	2 35
8″	3 90	4 55
10″	5 75	6 75
12″	8 80	9 90

Corr. Tee Hinges—	—Dozen Pairs— In bulk	In cartons
4″	$1 55	$2 55
5″	2 25	3 30
6″	2 85	4 30
8″	5 00	6 60
10″	7 15	9 20
12″	10 10	....

Heavy Strap Hinges, in bulk, dozen pairs—4″, $2.30; 5″, $2.85; 6″, $3.10; 8″, $4.20; 10″, $7.45; 12″, $9.20.

Heavy Tee Hinges, in bulk, dozen pairs— 4″, $1.95; 5″, $2.50; 6″, $2.80; 8″, $3.20; 10″, $6.45; 12″, $9.00.

Light Strap Hinges, in bulk, dozen pairs— 3″, 78c; 4″, 95c; 5″ $1.10; 6″, $1.30; 8″, $1.95; 10″, $2.70.

Light Tee Hinges, in bulk, dozen pairs—3″, 78c; 4″, 85c; 5″, $1.00; 6″, $1.15; 8″, $1.40.

The prices shown herewith on the No. 804 L.P. Butt is representative of the increase in other lines of steel butts:

Per dozen pairs—No. 804, 2 x 2, 85c; 2½ x 2½, $1.05; 3 x 3, $1.45; 3½ x 3½, $2.10; 4 x 4, $2.55.

Other lines associated on which advances are also recorded are wrot staples, hasps and staples, hinge hasps and shelf brackets.

Enamelware, Rope and Screws Higher

ENAMELWARE — The latest discounts issued on the various lines of enamelware reveal the fact that these goods are attaining high levels,

The following discounts now apply: Canada Ware, 20 & 10%; Imperial Ware, 40 & 10%; Premier Ware, 20 & 10%; Colonial Ware, 40 & 10%; Diamond Ware, 20 & 10%; Pearl Ware, 40 & 10% White Ware, 60%.

ROPE—Rope has advanced another cent per lb. base all around and best quotations now are as follows:

Per lb. base—Pure Manila, 25c; British Manila, 20c; African Hemp, 20c; Sisal, 18c; Lath Yarn, 18c.

SCREWS—The latest discounts on screws are not a big increase over former quotations, but the tendency is ever-upward and no signs of lower prices are in evidence as yet. The discounts to-day are:

F. H. Bright Screws, 65%; R. H. Bright Screws, 60%; F. H. Brass Screws, 30%; R. H. Brass Screws, 25%.

LINSEED OIL—Conditions in the various grain markets have improved somewhat, from the consumer's point of view at least, and declines are to be noted in practically all lines of grain. Wheat has been the most noticeable, but some decline is revealed in the price of flax, although not sufficient as yet to influence the price of linseed oil. This market seems to be holding fairly firm and prices remain unchanged from those noted in last week's report, which are as follows:

Raw, $1.40; Boiled, $1.43 per gal., bbl. lots.

The long threatened advance in turpentine has finally matured, however, and prices quoted below are five cents per gallon higher than formerly:

Bbl. lots, 85c gal.; ½ bbl. lots, 88c gal.; 5-gal. lots, 90c gal.; 1-gal. lots, 90c gal.

Wire Prices Still Soaring Skywards

The tendency of the various wire markets is decidedly upward as a review of these pages during the past few weeks would indicate.

Wire nails have advanced ten cents per keg; bright staples, fifteen cents per keg; barb wire has also advanced ten cents per spool, and annealed wire, bale ties and bright tinners' wire are each fifteen cents per 100 lbs. higher. The new prices, as represented by these increases are as follows:

	Ft. William	Winnipeg
Common Wire Nails	$4 40	$4 80 keg
Brt. Staples	4 40	4 80 "
Barb Wire—		
Lyman	3 80	4 10 spool
Glidden	3 65	3 95
Baker	3 60	3 90

Annealed Baling Wire, per 100 lbs.—No. 9, $4.90; No. 10, $4.95; No. 12, $5.10; No. 14, $5.25; No. 15, $5.40; No. 16, $5.55.

Bale Ties—14 x 9½', $5.45 Ft. Wm.; $5.85 Wpg.

Plain Twist Wire—$4.05 Ft. Wm.; $4.45 Wpg.

Bright Tinners' Wire, per 100 lbs.—0-9, $5.05; 10, $5.16; 11, 5.22; 12, $5.30; 13, $5.40; 14, $5.50; 15, $5.65; 16, $5.80.

Stove Pipe Wire, per 100 lbs.—No. 19, $7.75.

Sheets Go To Higher Levels

Latest advices available indicate that considerable activity is again noticeable in the various metal markets, with the result that prices are again soaring. The lines affected are galvanized sheets, on which an advance of twenty-five cents per 100 lbs. has been made; half-polished Canada Plate which jumps fifty cents per box and tin plates which advance one dollar per box.

These latest revisions bring prices to a new high-water mark as will be seen by a glance over quotations being made to-day in the following lists:

Per 100 lbs.—Galvanized Sheets, 10¾, $7.75; Premier, Apollo and Fleur de Lis, 28, $7.40; 26, $7.15; 24, $6.95; 22, $6.95; 20, $6.75; 18, $6.75.

Canada Plate, half polished, per box—6, $6.25; 7, $6.25; 8, $6.50.

Tin Plate, I.C., per box—20 x 28—$18.00; 20 x 33—$20.50; I.X., 20 x 28—$19.50.

Terne Plates, $15.50 per box.

Boiler Copper, tinned, 50c per lb.; planished, 65c per lb.

Solder, 32c and 33c per lb.

Other lines carrying advanced prices are noted herewith:

Poultry Netting Staples—Bright, ⅞', in kegs, 9c lb.; ⅞ in boxes, 10c lb.

Nevada Tea Spoons, 55c doz.; Nevada Dess. Spoons, $1.05 doz.; Nevada Table Spoons, $1.35 doz.; Janitor Saw Sets, $10.50 doz.

Screw Hooks, Sqr.-Cornered Hooks, Gate Hooks and Eyes, 75 & 10% off list.

Christmas Window Contest

FOR *many years past it has been customary for* HARDWARE AND METAL *to conduct a Christmas window display contest each year. The contest has become an event of wide interest for all Canadian retail hardwaremen interested in window trimming, and each succeeding competiton has been keener and each year has seen a wider and more representative response culminating in the big success of last year.*

In accordance with past custom, two contests will be conducted this year—one for stores in places under 5,000 population, the other for places of 5,000 and over. No restrictions will be set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade. Description should accompany each display.

Eight prizes will be offered as follows:—

PLACES OF 5,000 AND OVER		PLACES UNDER 5,000	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town window trimmer as to those in the larger towns and cities.

The contest closes on Monday, Jan. 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, *143-153 University Avenue, Toronto," and marked "For Christmas window contest."*

ARE YOU GOING TO ENTER?

EVENTS IN THE TRADE

Catalogues Wanted

Medicine Hat, Alta.—Hewitt & Black have opened a branch store at Orion, Alta. Manufacturers and jobbers are requested to send catalogues to the new store.

Enlarging Winnipeg Branch

Beatty Bros., Ltd., Fergus, Ont., are making an extension 36 ft. x 60 ft., to their Winnipeg warehouse, the addition has been made necessary owing to the expansion of the firm's Western business.

Business Changes

Montreal, Que.—Ovide Amour, hardware, has sold out to Morency Hardware Co.

Toronto, Ont.—Death & Watson, electrical goods, have been succeeded by Rosedale Motors, Ltd.

Bissell Carpet Sweeper Co. Incorporated

Bissell Carpet Sweeper Co., of Canada, Ltd., has been incorporated, under a Dominion charter, to manufacture, export, and deal in carpet sweepers, vacuum sweepers, cleaners and house furnishing goods, etc. The company is capitalized at $100,000, with head office at Niagara Falls, Ont.

Obituary

Toronto, Ont.—The death occurred here of Geo. Wallis, aged 64 years. Mr. Wallis was born in Richmond, Surrey, England, coming to Canada in 1874, where he engaged in the hardware business, wholesale and retail; later in building and real estate. About ten years ago he retired.

Open Montreal Office

The Ohio Iron & Metal Co., of Chicago, Ill., dealers in iron and steel scrap, have opened a branch office at 505 Transportation Building, Montreal, in charge of John M. Zehner, formerly with the Canadian Fairbanks-Morse Co. The Ohio Iron & Metal Co. also have branch offices in Pittsburg, Cleveland and St. Louis.

Ass't. Gen. Sales Agent at Montreal

The Dominion Iron & Steel Company, Limited, has announced the appointment of L. V. de Bury as Assistant General Sales Agent at Montreal.

Mr. de Bury has had extensive experience in the Canadian Steel trade, having been associated with the Page Hersey Iron Company, the Peck Rolling Mills, the Ontario Iron & Steel Company, and as Manager of the B. & S. H. Thompson Company, and is well known to the trade.

New File Manufacturing Company

The Port Hope File Mfg. Co., Ltd., has been incorporated in Ontario, with a capitalization of $40,000; head office and works at Port Hope, Ont. The directors are all residents of Port Hope, and are as follows: William Embleton, president; W. G. Brown, vice-president; Edwin H. Fogarty; R. C. Boney; Geo. B. Lowe, secy. treasurer. The company has been authorized to carry on the business of machinists, iron founders, and file makers and cutters. The company has acquired the Helm foundry, machine shop and permises at Port Hope, with all machinery, patterns, equipment, etc., therein, and are installing a file manufacturing and file cutting plant. The directors, it is said, have in the past all been intimately and practically identified with the machine and file manufacturing trades.

Personal

Alex. Gibb, manufacturers' agent, Montreal, has been confined to his home for the past couple of months through illness.

Walter E. Trump has left Red Deer, Alta., to take up his new work as a traveler for the British American Paint Co. Mr. Trump will make Calgary his headquarters.

F. J. Penberthey, general manager of Lowe Bros., Toronto, will leave next week on a short business trip as far west as Winnipeg.

Among the visitors at the Toronto office of HARDWARE AND METAL during the week were Chas. A. Moore, sec.-treasurer and general manager. Stratford Mfg. Co., Stratford, Ont., and F. P. Hall, representing the Carborundum Co., Niagara Falls, N.Y.

Dominion Incorporations

The Canadian Desmond-Stephen Mfg Co., capitalized at $50,000; head office, Hamilton, Ont., to manufacture steam injectors, abrasive wheels, grinding machinery, etc.

Universal Asbestos Company, Ltd., capitalized at $50,000; head office, Sherbrooke, Que., to manufacture and deal in asbestos and asbestos products.

International Mfg. Co., Ltd., capitalized at $1,000,000; head office, Ottawa; to manufacture firearms, explosives, etc.

Canada Truck Co., Ltd., capitalized at $49,000; head office, Montreal; to manufacture and deal in automobiles, vehicles, etc.

St. John, N.B. Notes

Private Frederick Leslie Stewart, formerly an employee of T. McAvity & Sons, Ltd., St. John, N.B., was killed in action on the western front on Nov. 11.

Lieut.-Col. J. L. McAvity, president of McLean, Holt & Co., Ltd., St. John, who was invalided home from the front, has been appointed chief recruiting officer for New Brunswick.

Private Harry P. McDonald, formerly employed with the James Robertson Co., Ltd., St. John, has been seriously wounded in the arm and chest while fighting on the western front.

The St. John Board of Trade is sending a communication to each of the principal boards throughout the Dominion asking for co-operation in securing Dominion legislation to put the daylight saving plan into effect next summer. Hardware men took a leading part in introducing the plan in St. John last summer.

The Minister of Trade and Commerce has promised the merchants of St. John that a steamer of 1,500 barrels capacity will be put on the route between St. John and Yarmouth next year. This is an important route for the distribution of goods for the western end of Nova Scotia and present arrangements have not been sufficient.

New Toronto, Ont.—Work has been started on the erection of a factory building here, for the Dupont Fabrikoid Co. of Toronto, manufacturers of Fabrikoid. The building will cost $75,000 and machinery to cost $175,000, will be installed.

Hamilton, Ont.—Officials of the Steel Company of Canada, Hamilton, stated on Friday that operations of that concern would be brought to a temporary stop owing to coke shortage. The plant is running under reduced tonnage in the hope that relief will come without closing down, but owing to the scarcity of coal cars and the heavy movement of coal from the mines to the lower lake ports, no improvement of the situation is anticipated until navigation closes.

HARDWARE LETTER BOX

Supreme Stoves

Finkheiner Hardware, Milverton, Ont.—Please give name of manufacturer at Welland, Ont., making the Supreme stove.

Supreme Heating Co., Welland, Ont.—Ed.

Electric Plates and Welded Fence

William Lochead, Forest, Ont.—Kindly advise where I can get "Fansteel" electric plates or small stoves; also an electric weld fence for putting on the top and front of horse stalls.

The electric plates can be secured from Pfanstehl Electrics Laboratories, North Chicago, Ill. The electric weld fence is made by Pittsburgh Steel Co., Pittsburg, Pa.—Ed.

Sold in Canada

Stevens Bros., Ceylon, Sask.—Please advise if the Honeywell solenoid regulator, as shown in an article in the August 12, 1916, issue of HARDWARE AND METAL is sold in Canada.

The Honeywell regulator is sold in Canada by the C. A. Dunham Co., Toronto; Steel and Radiation, Ltd., Toronto; Dominion Radiator Co., Toronto.—Ed.

Who Makes These Stoves?

F. X. Brunell, La Fleche, Sask.—We are at a loss to know where to buy repairs for the following makes of stoves with marks as follows:—No. 15 Royal Oak heater; No. 90 Victoria laundry stove.

Can any of our readers kindly supply information desired?—Ed.

Mantles for Oil Lamps

J. E. Robins & Son, Watrous, Sask.—Please advise where we can procure mantles for coal oil lamps.

Hamilton Gas Mantle Co., Hamilton, Ont., and Aladdin Lamp Co., Aladdin Building, Montreal, Que.—Ed.

Paper Balers

R. H. Bradfield & Co., Morrisburg, Ont.—Please advise if there is a manufacturer of paper balers in Canada.

Climax Baler Co., Hamilton, Ont.—Ed.

Maple Sunshine Stove

J. W. Smith, Hampton, N.B.—Please give name of maker of the "Maple Sunshine stove."

Can any of our readers tell us who makes the "Maple Sunshine stove?" A stove called the Maple Leaf Sun is made by the Beach Foundry Co., Ottawa.—Ed.

Organ Motors

Crowe & Magee Hardware, Bridgetown, N.S.—Please give name of manufacturers of water motors suitable for church organs.

Ross Bros., Troy, N.Y., manufacture organ motors. They are sold in Canada by Edward Lye & Son, 18 St. Alban Street, Toronto.—Ed.

ATKINS PUBLICITY MANAGER

T. A. Carroll has been appointed manager, publicity department, E. C. Atkins & Co., Indianapolis, Ind., and Hamilton, Can. Mr. Carroll has had charge of the company's sales promotion department for several years, and is thoroughly familiar with the details of the work. Mr. Carroll will continue to manage the sales promotion, in connection with the advertising, and will be assisted by Max Leckner, Jr.

T. E. CARROLL,

Appointed Manager Publicity, E. C. Atkins Co.

INDUSTRIAL NOTES

Bracebridge, Ont.—The Beacon Match Co. proposes to erect a plant here to cost $45,000.

Delhi, Ont.—The Sovereign Co., mitt and robe factory was destroyed by fire on Dec. 1.

New Toronto, Ont.—Brown's Copper & Brass Rolling Mills, Ltd., are building a new sheet mill and a reclaiming plant. The foundations are completed and the buildings are being constructed.

Vancouver, B.C.—The Vulcan Ironworks and Schaake Machine Works propose moving their plants from New Westminster to Vancouver. The Schaake Machine Works have leased a site on False Creek.

CATALOGUES AND BOOKLETS

Happy Homes for Horses

Beatty Bros., Ltd., Fergus, Ont., have issued a neatly gotten up folder entitled "Happy Homes for Horses," and featuring B. T. steel horse stable fittings and equipment. The folder is attractively illustrated and a space is provided for the dealer's imprint. Copies will be supplied free upon request.

Premier Stoves and Ranges

Catalogue No. 43, an attractive 96-page booklet, has been issued by the Thos. Davidson Mfg. Co., Montreal, featuring "Premier" stoves and ranges. The catalogue is splendidly illustrated and many new styles of stoves are shown, which have been added since the previous issue. The repair guides have been prepared in convenient form for ordering repair parts. Copies will be mailed on request.

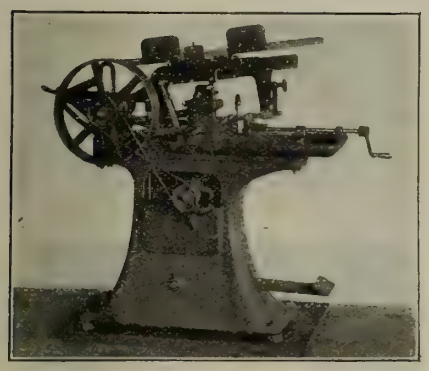
USING CEMENT IN COLD WEATHER

(Continued from page 24.)

idle. Concrete block, fence posts, small watering and feeding troughs can be made indoors. A convenient room for carrying on cold weather concrete work indoors can usually be arranged by fixing up some portion of a shed, barn or cellar. Sand and pebbles should be brought into the workroom and stored until desired for use. The workroom temperature should be kept at not lower than 50 degrees Fahrenheit. If the materials are stored in such a temperature, frost or frozen lumps of material that may have been in them will disappear if the piles are well raked over occasionally. Materials containing frost or frozen lumps must not be used in concrete mixtures. If the workroom is not large enough to store a considerable quantity of materials and they must therefore be brought indoors as required for use, some means for heating them must be arranged.

Care must be taken to prevent concrete block, fence, posts, and similar products from freezing during the first two or three days after made. They should be stored for a long time before being used, preferably until spring.

Sarnia, Ont.—It is reported in Sarnia that the Imperial Oil Co., will in the near future start construction work on a new refinery to be erected at Dartmouth, N.S., across the water from Halifax. It is stated that the refinery at Dartmouth will be supplied from fields in Mexico and Texas, and that oil will be brought up in tank steamers.

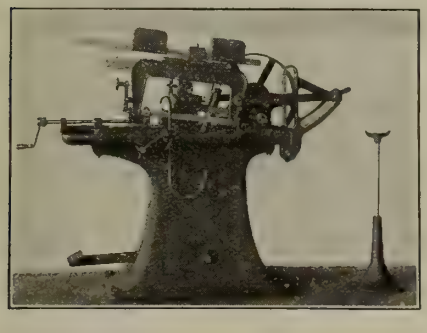


NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

STARRETT'S DEVELOP NEW MACHINE

A new hack saw machine, just being placed on the market by the L. S. Starrett Company, combines a number of features which are intended to give better service and more economical results than are now obtainable.



This is the first machine ever put on the market by the Starrett Company,

and was developed because of their connection in the metal cutting industries where their hack saw blades are used. The same guarantee as to material and workmanship applies to this machine as to their line of mechanics' tools and hack saws.

The makers state that four points in particular will commend themselves to practical shop men.

The first is the stroke adjustment, which makes possible a stroke of practically the full length of the blade, no matter what the size of stock. This, it

is said, insures uniform wear of blades and faster cutting.

The second feature is the foot treadle for raising the saw frame. By it the operator's weight raises the saw instead of requiring him to exert his strength in lifting. This, it is claimed, also gives greater speed.

The third feature is an oil dash pot controlling the descent of the saw. This dash pot allows the machine to be started when the frame is up and prevents it from dropping and breaking the saw. It further eases the blade on to the work so that the teeth do not bite in so rapidly as to strip them or break the saw.

The fourth feature is the automatic device which prevents the saw dragging on the return stroke and holds the saw frame at any height when the machine is stopped for setting work.

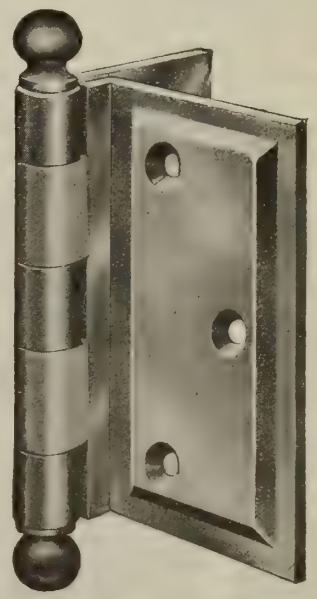
The saw frame is mounted on a rectangular slide with a bearing 11¼ in. long, accurately fitted with an adjustment for wear and provided with a quick-acting saw tightener to hold the blades square. The stroke of the saw is adjustable for stock from one inch to six inches in diameter.

A pump and lubricant are located inside the base and may be quickly removed for cleaning, although it is said this is seldom necessary as chips are retained in the pan of the bed and easily removed. The machine is intended to take fourteen-inch saws, but twelve or thirteen-inch saws may also be used. The height over all is 48 inches and the height to the top of the table is 28 inches. The machine occupies a floor space 14 x 32 inches.

Detailed description and bulletin may be had upon application to the L. S. Starrett Company, Athol, Mass.

KING TIRE CARRIER

The Richards Wilcox Canadian Co., Ltd., London, Ont., is now making the King tire carrier for Ford and Chevrolet cars. The makers claim that the carrier keeps the tires in shape and protects the inside of the casing. The carrier is attached to the rear of the car. The rim is contracted and expanded by a lever that works easily and instantly. The brackets are heavy angles. The carrier is made of steel throughout and is finished in black, baked enamel. No. 498 is for Ford cars, and No. 499 for Chevrolet cars.



STANLEY RAISED PANEL BUTT

The accompanying cut illustrates the new wrought steel raised panel half surface butt which the Stanley works, of New Britain, Conn., has just placed on the market.

The raised panel of this No. 162 butt matches the Colonial patterns in lock sets and escutcheons.

The lights and shadows on the surface of the panel give it the appearance of being finished in two different shades or tones. This, the makers state, is the same "two tone" effect which is produced on the latest builders' hardware.

The makers state further that all the advantages gained by the use of other Stanley half surface butts apply to No.

Satnley Raised Panel Butt.

162. With it a door is hung easily and quickly. The under tip is slotted so that the pin may be quickly reversed.

No. 162 is stocked in all the standard Stanley finishes and in the three best selling butt sizes, 3, 3½ and 4 inches.

It is packed with oval head screws for the surface leaf; one pair in a Stanley box; 100 pairs in a case.

TRADE NOTES

New Toronto, Ont.—The Dominion Abrasive Wheel Co., who sold their factory here to the Brown's Copper & Brass Rolling Mills, will build a new factory at Mimico at a cost of about $65,000.

Montreal, Que.—It is reported that the Canadian Car & Foundry Co. and the Canadian Steel Foundries, Ltd., have been awarded a contract for forgings to the value of approximately $14,000,000.

WEEKLY PAINT DEPARTMENT

Has Been Appointed General Manager

A. T. Black Promoted From Sales Management to General Manager and Director of Martin-Senour Co., Ltd.—Succeeds W. H. Gerke, Who Takes Interest in Boston Varnish Co.

FOLLOWING the withdrawal of W. H. Gerke from the position of vice-president and managing director of the Martin Senour Co., A. T. Black has been appointed general manager and elected to the Board of Directors.

The advance of A. T. Black, the new general manager and director, has probably never been exceeded, for spectacular rapidity, in the annals of Canadian

A. T. BLACK,
Promoted to position of General Manager of Martin-Senour Co., Ltd. Mr. Black has also been elected a Director of the Company.

industry. A little over four years ago he was employed in the retail hardware department of the Bond Hardware Co., Guelph. To-day he takes his place at the head of one of the largest paint manufacturing concerns in Canada. The four intervening years have been full of persevering, ambitious effort, and he has climbed from post to post with such sureness and mastery that, to those who observed, he gave every evidence of the ability to hew out a bright career.

Mr. Black was born at London, Ont., in 1878, and, as is fit and proper, got an early start in the hardware business. He first served with A. Westman, hardware merchant, at London. From there he joined the staff of the Bond Hardware Co., and began to display the qualities that have since brought him to the front so rapidly. He dressed the windows in the Bond store with a degree of originality that won him many prizes, and his displays during the week that the hardware convention was held in Guelph in 1912 were widely noticed and commented upon. It was shortly after this that Mr. Black received an offer to join the Ontario sales force of the Martin-Senour Co. It was the opportunity that he had been looking for, and he took advantage of it, taking over the Eastern Ontario field for that firm. That his work as a travelling salesman was satisfactory is perhaps best evidenced by the fact that when the post of sales promotion manager opened at the head office in Montreal he was selected to fill it. Later he assumed the duties of sales manager.

From the time that he thus took his place among the executive heads of the company, Mr. Black has made himself felt in an increasing degree. It has been recognized that he was a real factor in the sales campaigns of the company.

The withdrawal of Mr. Gerke left his enterprising lieutenant the logical successor to the general managership; and Mr. Black was duly appointed, thus accomplishing in four years the advance from a clerkship in a retail store to the responsible position of head of the Martin-Senour Co.

His success will bring a wide measure of gratification to his associates in the company as well as to the friends that he has made in the trade. He has always been most affable; and the news of the steady progress of "Archie" Black will bring real pleasure to all who have known him. Likewise his ability to administer the duties of the responsible post he now occupies will be most generally affirmed.

To what qualities he owes his really spectacular advancement it would be difficult to define. Those who have worked with him and against him say, however, that he has never been one to work along old lines. He has had a bigger share of

W. H. GERKE,
Who has resigned from the position he held as Vice-President and Managing Director of the Martin-Senour Co. Mr. Gerke will become associated with the Boston Varnish Co.

resource and initiative than is vouchsafed to most men, and so has been able to do things by new ways. In addition, he is a hard worker, he is ambitious and tireless, and possesses a personality that first won him business as a salesman and, later, gave him the power, as an executive head, to successfully handle men.

Probably one of the chief reasons why he has met with such a large measure of success is that he was for many years in

the retail hardware business and understands the problems which confront the retailer. The experience he gained as a retailer is of great aid to him in solving problems of paint retailing and working out plans which are of real practical value to dealer agents, in whose welfare Mr. Black takes a deep interest. He is sincere and untiring in his efforts on behalf of his retailer friends.

Mr. Gerke withdraws to connect himself with the activities of the Boston Varnish Co., in which company he has purchased an interest. After January 1 Mr. Gerke will take up his residence at Boston, Mass. Mr. Gerke's action, after twenty-seven years of service with the company, both in Canada and the United States, is altogether voluntary on his part, and is not part of any plan of the present directors to change the personnel of the company, or in any way alter its policies. During Mr. Gerke's residence in Canada he made a host of friends. His efforts, combined with those of a loyal and exceptionally efficient sales staff, enabled the Martin-Senour Co. to build up a remarkably large trade in Canada during the ten years the company has been doing business in this country.

Twenty-six years ago Mr. Gerke started at the bottom of the ladder in the factory of the Senour Mfg. Co., Chicago—a lad with a big ideal and a determination to win. He gradually worked his way through every department, and endeavoring to master every detail of the business, he studied chemistry and the scientific side of paint making at night courses at the Lewis Institute of Technology, from which he graduated.

Later he became foreman in the various departments, and finally superintendent over the Chicago factory, and was sent to Montreal to organize the Martin-Senour Co., which was done in such a thorough manner that he was given full management of the Canadian business.

WALTER B. RAMSAY,

President, A. Ramsay & Son Co., elected Vice-President Canadian Paint Manufacturers' Association as announced in last week's issue of HARDWARE AND METAL.

Sherwin-Williams to Erect Dye Plant

Important Announcement Made by H. M. Ashby, General Manager of the Company—American Plant Now Under Way.

THAT provided tariff arrangements are satisfactory, the Sherwin-Williams Company of Canada will immediately after the war erect a large plant for the manufacture of dyes in Montreal was the important announcement made by H. M. Ashby, general manager of the company, to HARDWARE AND METAL. The plant is destined primarily to capture a portion of the dye trade formerly held by Germany throughout the British Empire.

It is stated that the trade of Canada alone in this respect would not warrant the building of a factory. Canadian supplies at present come largely from the U.S., and this branch of trade has been found to be so important that the company is even now erecting in Chicago a large plant. This will supply the Canadian needs of the company until such time as a plant is built here.

The company is at present manufacturing a complete line of colors in connection with its paint plant, having started with two lines only, and the product has been found so satisfactory as to lead to the decision referred to. The chief importance of the decision, of course, lies in the fact that a supply of dyes of all kinds is assured all parts of the Empire, a matter which has been the subject of much doubtful speculation. The outcome will, of course, depend upon the arrangements with the various Governments concerned. If the plant is erected in Canada it will necessarily be of immense capacity, in order to take care of demands from all parts of the British Empire.

GEORGE HENDERSON,

President, Brandram-Henderson, Ltd., elected President Canadian Paint Manufacturers' Association, as announced in last week's issue of HARDWARE AND METAL. Mr. Henderson was in Western Canada when the election of officers took place.

DECAY GREATER THAN FIRE LOSS

In an address delivered by Ernest T. Trigg, at the Paint Grinders' meeting in New York, the speaker stated that it is undoubtedly a fact that there is more actual money lost in the United States every year through deterioration and decay in buildings, due to failure to properly protect and preserve with paint, than accrues from losses by fire. Professor H. H. King, of the State Agricultural College of Kansas, in a letter written April 17, 1916, makes this statement:—

"The losses ensuing in this State through lack of paint are much greater than the losses sustained by fire."

When the property owner pays for protection against fire, he is providing against a possible loss, but if he fails to pay for painting and repainting his property with sufficient frequency to preserve it from decay, he fails to protect himself against a certain loss.

Obviously—it is most desirable that some definite effort should be made by those interested in an increase in the consumption of paint to bring about a condition in the minds of property owners which will insure the application of paint coatings to their buildings with sufficient frequency to protect and preserve them indefinitely from the action of the elements.

The way to do this is to tell the story to every property owner in the country in a conclusive way and with sufficient frequency and for a sufficient length of time to definitely anchor in the minds of such property owners the fact that the first and most important purpose of paint is to protect and preserve. This can only be accomplished by care-

fully planned publicity carried on in an impersonal way.

The retailer is the man who comes in direct contact with the consuming public. His sales of paint will be in proportion to the efforts he puts forth to sell paint. More paint sales mean more profit and incidentally a better and brighter community. The point made in Mr. Trigg's address, that the property owner in paying for protection from fire is providing against a possible loss, but in neglecting to paint is failing to protect himself against a certain loss is one that retailers can use effectively when trying to sell paint to property owners.

Pratt & Lambert Convention

The first week in January is going to be a big one at the Buffalo home offices of Pratt & Lambert, Inc., not only because that is the week of the big varnish concern's biennial convention, but because it marks the close of President W. H. Andrews' twenty-fifth year with the firm. Special efforts have been put forth to honor Mr. Andrews by making this the biggest year in the firm's history—and it is said the success of these efforts has been beyond even the most optimistic hopes of those who planned them.

CONGRATULATING THE PRESIDENT

The members of the paint and allied trades of Boston generally, and the members of the Paint and Oil Club in particular, states the *Paint, Oil and Drug Review*, are congratulating James B. Lord, of the Boston Varnish Company, on his re-election as president of the National Varnish Makers' Association. Mr. Lord, since he first became connected, when a very young man, and he is young still, with the paint and oil trade of Boston, has taken a very prominent part in everything connected with the business. He has served with distinction on committees of the New England Club and of the national body, and the administration as president of the Paint and Oil Club of New England was very successful. In Boston his friends know him as "Jimmie" Lord and so address him.

The announcement of Mr. Lord's re-election appeared in last week's issue of HARDWARE AND METAL.

H. J. McADIE,
Appointed Sales Manager, A. Ramsay & Son Co., Montreal.

H. J. McADIE APPOINTED SALES MANAGER

Formerly Toronto Manager, A. Ramsay & Sons

H. J. McAdie has been appointed sales manager A. Ramsay & Sons Co., with headquarters in Montreal. Mr. McAdie represented the company in Central Ontario for three years prior to taking over the management of the company's new branch at Toronto in March 20, 1915. The announcement of his promotion to the sales management, with headquarters at Montreal, will be welcomed by his many friends in the trade.

Mr. McAdie, who is a Canadian, has had experience in the paint business covering a period of 17 years, during which time he travelled extensively in the United States and England as well as in Canada.

WEEKLY PAINT MARKETS

(Continued from page 40.)

Shellac Gum Higher; Varnishes to Advance

SHELLAC AND VARNISH.—A further advance was recorded in the price of gum shellac during the week. Finest orange gum is now quoted at 49c per pound and finest white at 50c per pound. There is a firmness in the market for prepared shellac advances being recorded in some instances. Varnishes are all in firm market. Locally the dealers have not advanced their prices in conformity with the recent decision of paint men to advance paints and varnishes. But these products will undoubtedly be marked up in price in the near future. There is a good demand for shellac and varnishes.

The above display will furnish the window trimmer with some ideas for a Fall window trim.

Toronto MONTREAL Vancouver

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Dec. 6. — While there is no particular movement of interest in painters' materials in Montreal since last week's increase in paint prices, the market for all materials is firm and further increases are looked for. White lead in oil looks ominously like breaking its own high record, though linseed oil is a shade quieter this week, and in slightly duller market. Lead however, is very firm, and the outlook is certainly for an increase in price of white lead in oil. Turpentine is still firmish but the market is uneventful in this. Gasoline is unchanged, still at 27½ cents a gallon. The effects of the increase in mixed paint prices upon demand are being awaited with interest by manufacturers.

White Lead in Oil And a New Record

WHITE LEAD IN OIL.—The next increase of price in painters' materials will probably be found in white lead in oil. The market for this commodity is extremely firm at present, though the prices of the past few weeks obtaining since March 24th when they came into effect breaking all records, have not so far been altered to make new white lead history in Canada. In view of the outlook in white lead at present with the market for the metal firming up and the oil at unprecedented prices, the words of HARDWARE AND METAL of March 24, 1916 in this relation, are worth recalling. They were as follows

"Montreal, March 24.—An advance on white lead in oil of $2.25 per 100 lbs. is not only the outstanding feature of the paint markets of the week, but the most striking development in the trade for years; it raises the price to $13.80 on a ton lot basis, a level which has not been equalled in the history of the Canadian paint business so far as the present generation of manufacturers are aware. The rise follows abnormal developments in the lead market, and even at the price quoted conditions are so uncertain that orders accepted are for immediate delivery only. The quotation given compares with a price of $8.25 before the outbreak of the war."

At the time HARDWARE AND METAL so reported on the market for white lead in oil, linseed oil was being quoted at 95-97 cents for the raw, and 98 cents to $1.00 for the boiled in 1 to 2 barrel lots. Pig lead as used for this product costs at present $7.00 to $7.65 per 100 lbs. (St. Louis, U.S.A.). In March 1916 the same metal was priced $6.75 per 100 lbs. (St. Louis). With the oil at least 20 cents per gallon higher, and the metal also higher, what is the natural inference as regards white lead in oil? Quotations at present are still $13.80 per 100 lbs. in ton lots, and $14.10 for smaller quantities.

Linseed Oil Shows Slight Slackening

LINSEED OIL.—The condition of great and growing firmness in linseed oil during the past few weeks seems to have come to a halt—it may be only a temporary halt. Crushers' price for the raw oil was still over the dollar mark, and from certain indications as apparent to at least one large crusher in Montreal, likely to remain so. Quietness was reported in one quarter; an outlook for firmness in another. The paint manufacturing firms quoting on linseed oil repeated last week's quotations for the most part, but here and there shadings downward were noticed, the low mark $1.15 for raw in lots of 1 to 4 barrels being shaded to $1.12½ in one or two instances. Firms which had been short of linseed oil in the period of rapidly rising prices are replenishing their supplies, but there is not much eager activity noticeable in the market at present. Average quotations are still

Per Imp. gal.	Raw.	Boiled.
1 to 4 bbls. ...	$1.15-1.20	$1.20½-1.25
5 to 9 bbls. ...	1.14 1.19	1.19½-1.24
10 to 25 bbls...	1.13-1.18	1.18½-1.23

Turpentine Keeps Firm, But Quieter

TURPENTINE.—There has been no change in turpentine during the week past, and prices maintain at present much as they did, with shadings here and there where business considerations come in, or where firms are not anxious to take on turpentine business. There was of course a firmness last week, and this continues, but not to the extent of increasing prices any. Following are the prices principally being quoted in Montreal.

	Per Imp. gal.
1 barrel lots	73c-78c
2 to 4 barrels	72c-77c
5 to 10 barrels	71c-76c

Paint Manufacturers Issuing New Lists

MIXED PAINTS.—The announcement that paints have advanced in price is being made to the trade interested, but not as on the occasion of the previous advance, by a circular notice. Purchasers of paints have been warned by travellers for the manufacturing firms that prices in these times are subject to change without notice, so that the manufacturers while agreed upon the advance scale announced in last week's HARDWARE AND METAL, are not likely to publish the new changes made over their united signatures. All manufacturing firms, are, however, preparing new lists which will be in the hands of their customers in the course of a few weeks, prices still 'subject to change without notice.' There is no indication given anywhere that paint prices may not take a still farther advance, but probabilities are in favor of a period of quiescence for the present until it is discovered how the paint using public are taking to the new prices. There had been doubts in the minds of some considerable manufacturers before paint prices most recently rose, on the score that paint is a commodity liable to suffer in market through over-economy on the part of the public when paint prices are high. But with the vast advances of markets all round, the position of paint is by no means peculiar, and as the latest rise in price is fully justified by the cost of materials probabilities are that demand will not show any noticeable falling off.

TORONTO

TORONTO, Dec. 8.—Demand for all paint lines has been seasonably good. Higher prices recently announced for paints have not had any appreciable effect on sales. Some dealers who are now booking for spring delivery report the trade good, heavier in fact than last year. Most of the jobbing

If You Could Get a $1,000 Order By Writing One Letter—Would You?

EARLY last December a hardware merchant in a small town read an advertisement in his favorite trade paper and wrote a letter in reply to it.

"That letter," he told one of our travellers last week, "brought me over a thousand dollars' worth of business—because through it I obtained a Brandram-Henderson agency, with the result that my 1916 paint sales were $1,050 ahead of my best previous year."

This merchant does not hesitate to give much of the credit for his increased paint business to the active assistance given him by the B-H organization.

He is to-day very glad that he wrote that first letter, asking for "the B-H agency proposition," last December.

If **you** are a responsible, progressive merchant, in a locality where we are not already represented, a similar letter written to-day may be followed by the same gratifying results in 1917.

Write the letter, anyhow, and when our complete proposition is before you, see if you're willing to turn it down.

BRANDRAM-HENDERSON LIMITED

Montreal, St. John, Halifax, Toronto, Winnipeg

If interested, tear out this page and keep with letters to be answered.

houses have not started their travelers on the road to book for spring delivery. They expect to start them out about January 1. Advances in bluetone have been recorded in the primary market and there is a firmness in the local market in accord therewith. Linseed oil is holding steady at the quotations of last week. Turpentine is in firm market with sales somewhat limited. White lead is in very firm market and an advance in this product can be looked for in the not distant future. Glass has not changed locally but the American manufacturers have announced that there will be an advance of 20 per cent. over the present selling price to the Canadian trade. Gum shellac has advanced in accord with the higher prices in the primary market.

Linseed Oil Situation Still a Puzzling One

LINSEED OIL.—The market for linseed oil has held steady during the week, although there is a tendency to firmness in the face of the market for flaxseed. Receipts of flax continue heavy at Winnipeg, averaging around 50 cars per day at Winnipeg during the past week. On Wednesday of this week the market for spot flaxseed closed at $2.63¾, as compared with $2.56¾ one week previously. At the opening of the market on Thursday there was a firmness with an inclination toward higher levels. In the face of the seed situation there has been no disposition to move prices either upward or downward. It is a waiting market—waiting to see what course the seed will take in a more pronounced direction. Demand for oil has been fair during the week. In some quarters, oil cake is still reported in good demand with prices inclining toward higher levels. Again in other quarters there is a noticeable falling off in the amount of this commodity being used by farmers as feed. There has been considerable used in getting stock in shape for the winter fairs. Following is the range of quotations:

	Raw.	Boiled
1 to 2 barrels ..	$1.10-1.20	$1.12½-1.23
3 to 5 barrels ..	1.09-1.10	1.11½-1.24
6 to 9 barrels ..	1.08-1.18	1.10½-1.23

Gasoline Steady, But Crude Has Advanced

GASOLINE.—The market in gasoline has held steady during the week. There is a firmness in the primary market, however, due to the fact that crude oil in the Pennsylvania field has advanced 15c per barrel to $2.75, the highest point in the history of the oil industry. The demand for gasoline at this time of the year is not as heavy as during the motoring season and consequently the price of crude will in all probability not affect the price of gasoline in the immediate future. In the Mid-Continent oil fields there have been no advances in crude as yet, but an advance in the Pennsylvania field quite often heralds an advance in the other oil-producing districts. There is a falling off in production in the Mid-Continent field as evidenced by the fact that the Cushing wells which two years ago were producing at the rate of 300,000 barrels per day are now producing only 50,000 barrels per day. It is from the Mid-Continent field that most of the crude oil for use by Canadian refiners is secured. Coal oil on the other hand, in big demand at this time of the year, has advanced 1c per gallon and this in part absorbs the firmness in oil market generally. Gasoline is still quoted at 26½c to 27c and benzine 1c under gasoline.

Paints Firm at Recent Advance

MIXED PAINT. — Ready mixed paints are holding firm at the advanced prices reported last week. There are some retailers who are sorry that they did not get in their orders at the old price. However they had plenty of warning that prices were going to advance. Those who took the advice supplied from week to week and who studied the situation covered for their requirements and are in a very fortunate position.

WHITE LEAD.—White lead in oil is very firm due partly to the high price of oil and to the continued high price of pig lead. The U.S. Trust on Wednesday of this week advanced their price on pig lead to the price which the Independents had been asking for some time past. It would appear therefore that higher prices on white lead in oil may be expected. The demand for lead is only fair. The price locally is $13.95 per 100 lbs. in ton lots and $14.25 per 100 lbs. in less than ton lots.

Turpentine Firm In Primary Market

TURPENTINE. — Turpentine continues firm at last week's prices and the demand is fair. There is a feeling in some quarters that turpentine will not be lower, but may advance further. The price however, will be governed largely by the demand which at present is not heavy. The *Savannah Weekly Naval Stores Review*, in referring to the market this week at Savannah states as follows:—

"Turpentine is back to fifty cents again, with an active demand. Few believe that even on a reaction, if any should come, it will ever get more than one-half to one cent below that figure, while the general opinion is that higher values loom up ahead and that after the holiday season, if not before, 55 cents will be chalked up as the official quotation at the Savannah Board of Trade. The crop is well in, December will bring very moderate receipts, and after that for about four months there will be constant drafts on the reserve stocks, which are strongly held. The situation favors higher values, from whatever point it is viewed. While 55 cents is talked of and accepted as very probable there are some who predict higher values than that and who look for a closer approach to 60 cents before the next crop begins to move in any volume. Reviewing the season there is a feeling that turpentine should never have gone as low as it did, that a proper movement to support the commodity would have meant 50 cents for the greater part of the crop, and that the consumers have had the benefit of very reasonable prices for spirits.

Reports indicate that there will be persistent buying from now until next spring. The feeling has developed that in turpentine, as with regard to rosins, the usual holiday dullness will be considerably minimized, that there will be little let up in general industrial operations in the last half of the month, and that there will be a steady movement of the article into consumption. Dealers report a good many orders of late, not of large proportions but in the aggregate taking considerable turpentine. Stocks at the main primary markets are dropping down to last year's figures and the close of the season, after all, will, it is thought, not show any visible supplies to alarm one.

There is a wide range of prices quoted in Toronto as follows:—1 barrel lots (per Imp. gal.), 71c-79c; 2 to 5 barrels, 70c-78c; 6 to 9 barrels, 69c-77c; 5 gallons, 76c-86c.

Glass Prices Have Advanced in U.S.

GLASS.—In the United States a big advance has been announced by the manufacturers of window glass, amounting to 20 per cent. Canadian dealers have not yet put the advance into effect but it is stated if glass were advanced in conformity to the point where it is now selling in the United States that it would be selling net list in Canada instead of 20 per cent. This firmness in the American market undoubtedly presages higher prices among Canadian dealers. However, there are fairly heavy stocks on hand at the present time.

Paint Prices may be Considerably Advanced

It is quite probable that in the near future the prices of paints and other finishes will experience advances in proportion to those made in other lines of manufactured goods.

Any advance that may be made in the prices of S-W products will be justified and only when absolutely necessary because of the ever-increasing costs of raw materials and manufacturing. S-W Quality will never be lessened.

We are not prepared to state definitely when prices will advance, but we feel that dealers will be well advised to get their orders in at once for enough stock to carry them through the coming selling season.

Ask us for particulars of our exclusive Agency proposition.

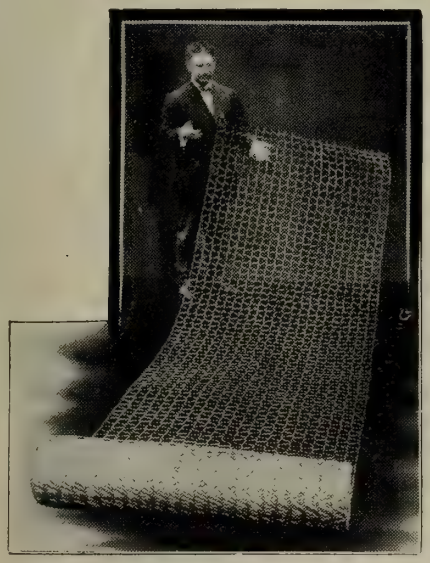
NO Shortage of Poultry Netting

You and your customers want the BEST. We can supply it. ***There is no Poultry Netting made equal to the "U.S."*** The accompanying photographs illustrate its many points of superiority.

Base Board and Top Rail Unnecessary

Our U.S. Poultry Fence is so stiff and strong and stretches so straight and true that the use of top rail, base board and so many posts are unnecessary. Furthermore, where top rail is used chickens can see something to fly to, therefore, the fence must necessarily be higher. If no top rail is used it is not necessary to have the fence so high.



General Appearance

U.S. Poultry Fence costs about the same in the roll as the old style netting, but considering the cost erected and the extra life by reason of its superior quality there is no comparison.

If you would have a poultry yard of which you can be justly proud, you should build it of U.S. Fence, which is strong and satisfactory in every way, which stretches up straight, even and nice without buckling, bagging or sagging.

We have enough "U.S." Netting in stock NOW to fill all orders booked, and to fill all we accept, for Spring delivery.

There have been various statements made this fall to the dealers regarding "U.S." Poultry Netting, one being to the effect that we would not be able to supply this material. We just wish to state that we have sufficient in stock **now** to fill all orders on hand, even if they were doubled, and our bookings are the largest in our history. The above remarks also apply to Black Screen Cloth—we have it **NOW**. Write for catalogue and prices.

Re Gauges and Prices of Sheets.
Prices on black and galvanized sheets given below are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.
On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	5 50	5 50
12 gauge	5 60	5 60

PIONEERS
of
PURE PAINT

Are you informed as to exactly what ingredients are used in the paint you are selling?

Do the manufacturers of your line of paint take you into their confidence in this respect?

MARTIN-SENOUR PAINTS AND VARNISHES

No matter how high the prices of raw materials, such as *Pure White Lead, Pure Oxide of Zinc* and *Pure Linseed Oil* may go (these are recognized to be the best ingredients for the manufacture of house paints), there will be absolutely no deviation from the guaranteed formula of Martin-Senour 100% Pure Paint. This guarantee, which is plainly printed on the label of every can, is the best assurance for both dealer and customer that each is giving or getting the most value procurable.

Is not this protection worth having in these times of rising costs? This guarantee printed on the can will dispel any suspicion in the customer's mind that inferior ingredients have been substituted to the detriment of the paint in order to conform to a price.

The Martin-Senour Dealer Agent, besides selling the best paint in his district, is alone in this respect, as no other line of paint is marketed under such a guarantee.

Drop us a line for full details of our exclusive Dealer Agency plan.

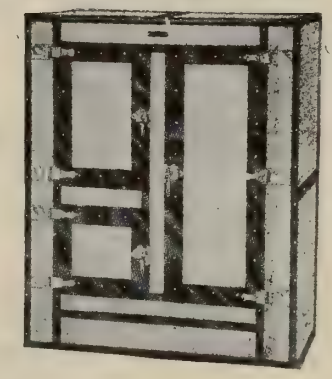
Progressive Manufacturers

of products in which sheet plate or plate metal is employed are increasing their profits and laying foundations for future prosperity by adopting



ARMCO IRON

ENAMELED TABLE TOP

Sanitary, smooth, convenient, made to fit over top of ordinary wooden table. Manufactured by Enamel Products Co. of Cleveland, Ohio. Perfect and lasting enamel on an Armco Iron base.

THE LEONARD CLEANABLE REFRIGERATOR, made by The Grand Rapids Refrigerator Co. of Grand Rapids, Mich. Armco Iron used exclusively for enamel base. A handsome and successful product made possible by the employment of the best of materials.

Over seventy-five leading stove manufacturers use Armco Iron. By many it is employed in all the sheet metal portions of their products because of its established superiority in Rust-Resistance. Others have been led to its adoption for exterior surfaces by its beautiful tint and finish in the form of polished iron. Very many avail themselves of the advantages it offers as a base for enamel.

Armco Iron's superiority for enameling arises from its remarkable purity. Imperfections in enameled surfaces come from impurities in the metal beneath. Chief of these are tiny pockets of gas. This gas expands rapidly and irresistibly in the heat required to bake the enamel. As the gas expands it forces through the surrounding metal and enamel coating. Some manufacturers have found that the use of Armco Iron almost entirely does away with enameling culls.

The American Rolling Mill Company

Middletown, Ohio

AMERICAN ARMCO INGOT IRON

The trade mark ARMCO carries the assurance that iron bearing that mark is manufactured by The American Rolling Mill Company with the skill, intelligence and fidelity associated with its products, and hence can be depended upon to possess in the highest degree the merit claimed for it.

Licensed Manufacturers Under Patents Granted to The International Metal Products Co.

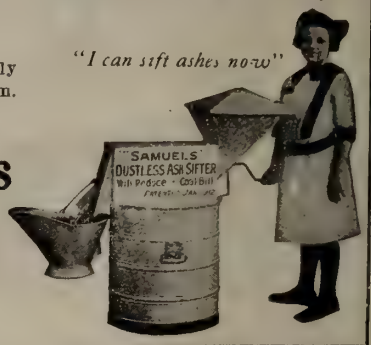
Economy This Winter

The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

CANADA
Dustless Ash Sifter



(See illustration)

Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.

Jobbers everywhere supply them; order through them.

"I can sift ashes now"

SUPREME CUTLERY

PEERLESS ORNAMENTAL FENCING

It's Made of Heavy Open Hearth Steel Wire

with all the impurities burned out and all strength and toughness left in. Heavily galvanized. Every intersection is locked together with a Peerless clamp. Top and bottom wires of Peerless Poultry Fencing are extra heavy—extra strong. Consequently fewer posts are required. **Peerless** fencing can't sag—can't rust—can't get out of shape—can't help giving absolute satisfaction.

You can sell our fence with a clear conscience and make money, too.

Send for our dealer's proposition. It's attractive. It will interest you. It's well worth a stamp. Send today.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

TRAVELERS WANTED

HARDWARE TRAVELLERS WANTED TO carry as side line a popular priced paper baling machine. Exclusive territory. Every dealer a prospect. Box 409, Hardware and Metal, Toronto.

SITUATIONS WANTED

HARDWARE SALESMAN DESIRES POSITION—eight years' experience, best of references. Box 411, Hardware and Metal, Toronto.

AGENCIES WANTED

MANUFACTURERS' AGENT IN CANADA desires Canadian rights on small article to sell through display advertising. Correspondence and catalogues solicited. Frank R. Burgess, 407 Hope Chambers, Ottawa, Canada.

WANTED—LINES TO SELL ON COMMISsion to the hardware and general stores in Southern Alberta. I have been calling on this trade monthly for four years, and have a good connection. Good references furnished. Box 412, Hardware and Metal.

BUSINESS CHANCES

HARDWARE BUSINESS IN HAMILTON for sale. Stock and fixtures about $5,000. Store and dwelling could be carried on $3,000. Box 406, Hardware and Metal, Toronto.

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

WANTED—HARDWARE BUSINESS, GIVE full particulars. Will investigate immediately. Box No. 410 Hardware and Metal.

MACHINERY FOR SALE

FOR SALE — GASOLINE LIGHTING plant, also a number of second-hand tinsmiths' tools and machines. Apply H. L. Albrecht, Newton, Ont.

MISCELLANEOUS

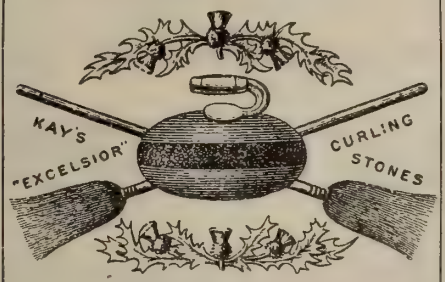
FOR RENT—OLD ESTABLISHED HARDware premises in Goderich. For terms apply to Proudfoot, Killoran & Cooke, Barristers, Goderich, Ontario.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott, Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.



MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

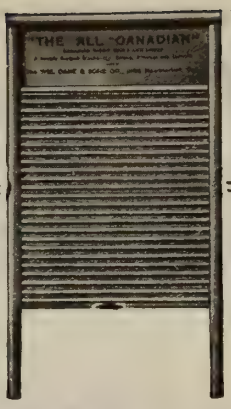
SHOW CARD WRITERS EARN BIG money: no special talent needed; we can teach you in few months by our special system right at your home; our students earn money after second lesson; after six lessons one of our students took $17 worth of orders in one day; get particulars special December offer. Dept. H, Shaw Correspondence School, 393 Yonge St., Toronto.

"KAY'S EXCELSIOR"

Curling Stones

They run perfectly from the start. No working down with emery necessary.

We carry a full line, in assorted weights, 36 to 45 lbs. to the stone, exclusive of the handle. Also Handles, Grips, Fancy Washers, Brooms, Boxes. Also Builders' Supplies.



Walter Belyea

Successor to the Late

THOMAS BLACK

WINNIPEG

A want ad. in this paper will bring replies from all parts of Canada.

COSTS LESS

than aluminum and zinc wash boards, is just as good and is more serviceable.

The All-Canadian
All-Wooden
Wash Boards

are the result of great scarcity and high price of zinc and aluminum—a price that has greatly handicapped washboard sales.

All-Canadian grown wood, Canadian-made nails, and by Canadian workmen—that's why it's all-Canadian.

The finest grained hardwood is used for rubbing surface.

Retails at 20c and leaves a BETTER profit.

Standard zinc, glass and enamel wash boards always on hand for prompt delivery, until notice to the contrary.

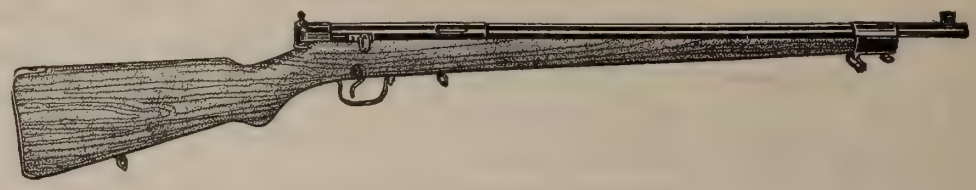
The Wm. Cane & Sons Co., Limited

Makers of the New Wooden Wash Board

NEWMARKET, ONT.

Want Ads.

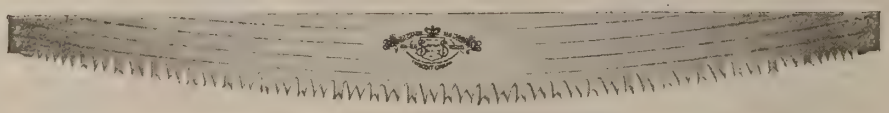
Try it out



If you want a buyer for your business, or have a situation to fill or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

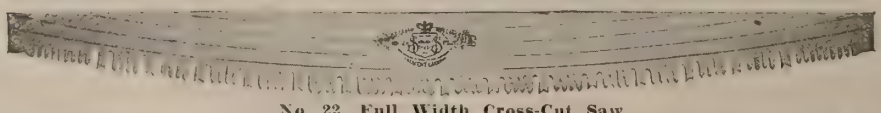
The profit the OTHER MAN makes this season on Ross Rifles won't pay for YOUR Christmas Dinner

Some of your customers will buy Ross Rifles for Xmas Gifts. Make sure that they will buy them in your store.

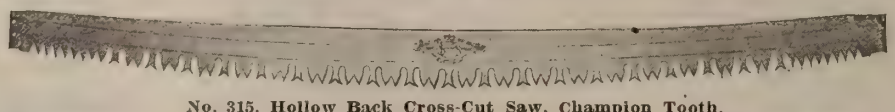


Ross Sporting Models and Cadet Rifles should be displayed by every Sporting Goods Department looking for maximum returns from the Christmas Trade.

If you lack any information concerning prices, we solicit correspondence.



Ross Rifle Company - Quebec



You should place your orders now for a stock of SIMONDS Crescent Ground Cross-Cut Saws

No. 13. Full Width Cross-Cut Saw.

No. 22. Full Width Cross-Cut Saw.

No. 315. Hollow Back Cross-Cut Saw, Champion Tooth.

No. 325. Hollow Back Cross-Cut Saw, Lance Tooth.

YOU can make no mistake when you do this as every logger or woodsman knows this make of saws and will always pay more for them for the simple reason that they enable him to do more work with a smaller amount of labor. He knows the better cutting quality of the saw will make it more than pay for itself. Select the styles you want from these pictures or write for our complete catalog and more information.

We also have a complete line of Hand Saws.

Place orders through your hardware wholesaler.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

It's not Enough to Have the Right Tool

It must be Used Right

¶ Ever seen a Ford running jitney with twelve passengers? It's done often enough, but it's not giving the car a square deal.

¶ We've had instances where a blade .032 thick was being run in a heavy, high-speed machine that required a thickness of at least .049. And there was trouble because the blade broke—it couldn't do otherwise.

¶ Others get the idea that the faster the blade is run the quicker the cut. As a matter of fact the speed can be so great that the teeth of the blade will all be rubbed flat without cutting at all.

¶ If you've had similar troubles, we'll gladly give you the benefit of our experience.

¶ It's the little things that count.

Champion Priming Plug

Sold Everywhere Price $1.25

¼ Turn Starts You

Champion Dependable Priming Plugs enable you to do away with fussing and delay. They put a drop of gas right smack in the path of your spark. An explosion is bound to result, and your motor starts on the first quarter turn.

Champion

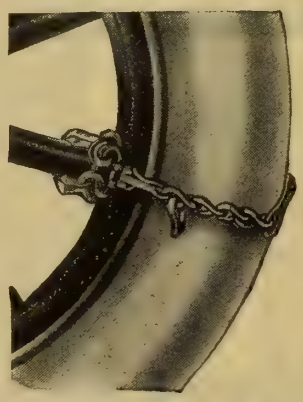
"TOLEDO MADE FOR THE WHOLE WORLD'S TRADE"

Dependable Priming Plugs

Are necessary winter equipment for every automobile. They are on sale everywhere and cost only $1.25 each. They are simple, effective and can't get out of order.

They are made in the world's largest spark plug factory, under the same exacting methods as all Champion Dependable Spark Plugs.

Wise dealers are stocking Champion Priming Plugs for winter business. They sell briskly during months that are otherwise dull. Order early and be ready for the cold weather rush of business.



Champion Spark Plug Co., 7001 Avondale Avenue, Toledo, Ohio, U. S. A.

"EASYON" MEANS EASY TO PUT ON

Easyon Tire Chains can be put on—and taken off—easily; really with extraordinary ease. For this reason they become immediate favorites of car owners; they save time and tempers.

But "EASYON" TIRE CHAINS Have Other Advantages:

they wear longer than other chains—they cost less and the cross Chains can be renewed at less expense and put on with greater ease than other Cross Chains.

Easyon Tire Chains are in demand right now, and the sale will be active all winter—when skidding is imminent.

It is necessary to carry only three sizes; these fit all tires.

EASYON CHAINS are packed a set of eight in a bag, four for each rear wheel, enough to give a good grip on any road.

Size 3½ fits 3" or 3½ tires.	Retails at $2.40 per set.
Size 4½ fits 4" or 4½ tires.	Retails at $3.20 per set.
Size 5½ fits 5" or 5½ tires.	Retails at $4.00 per set.

Easyon chains are also made for solid tires.

Write for full particulars.

SOOTLESS SPARK PLUGS

This plug increases the protection on the engine end of the plug by adding a porcelain cap, so arranged and enclosed that it is protected against breakage, and yet gives plenty of air space between the porcelain (within the firing chamber) and the outer steel shell. This renders the chance of short-circuiting through carbon formation exceedingly remote. The plug is so constructed that the high pressure, due to compression, tends to tighten rather than to loosen it. Being practically oil and soot-proof, it is especially adapted for use in air-cooled engines that use a large amount of lubricating oil.

Canada's Only Weekly Hardware Paper

HARDWARE AND METAL

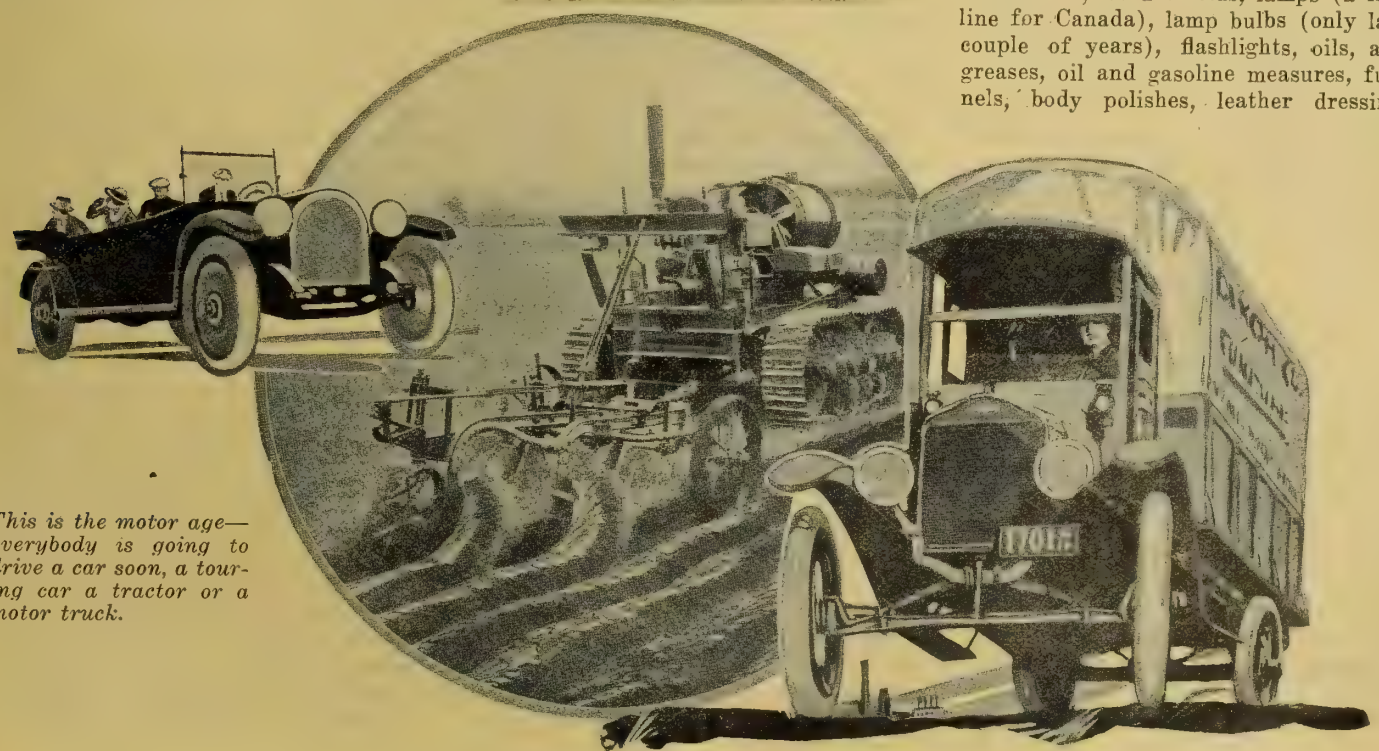
Published Every Saturday Since 1888

Vol. 28 TORONTO, DECEMBER 16, 1916 No. 51

Every Man an Auto Owner

Huge Increase in Number Sold in Canada Points to This as a Probable Development — The Golden Opportunity That is Being Created for Business in Automobile Accessories for the Hardware Dealer.

A PROPER estimate of the importance of the auto accessory trade can only be secured by looking at the very remarkable increase in the number of automobile users in Canada. The motor car is becoming almost as common as the bicycle in days gone by. Everybody is going to have a car before long—if prosperity keeps up and the prices of cars keep coming down. Every city block, every country cross roads, will need its garage. The farmer will bring his produce to market by gasoline power; the mechanic will chug off to work with his hand on a steering wheel; and the lawn mower, that holders of street car stocks have had to keep for the clipping of coupons, will become rusty from disuse.



No matter what happens the demand for automobiles in Canada is going to be so great that the accessory trade constitutes the grandest opportunity that has perhaps ever been offered to the hardwareman. Consider the fact that by the end of the present year, it is estimated, there will be 115,000 automobiles in use in Canada, or one to every 70 of the population. In the State of Iowa there is a car to every 20 of the population. This if carried out for Canada would mean a total of 400,000 cars in use. Is this impossible? Consider that at the end of 1914 there were less than 50,000 cars in all Canada; that in the year just closing one Canadian factory turned out and sold—including exports—32,000 cars, and then could not satisfy the demand by several thousand, and are planning for anywhere from 40,000 to 60,000 for the coming year, import and export, with at least another 20,000 to be turned out by other factories for domestic sale alone next year, with a total value of all exceeding $45,000,000, and one will have some conception of the future that lies before one of our infant industries.

And these are only instances of the trend of the times in the automobile industry in Canada.

The Accessory Trade

It has been estimated, taking only a few lines, that 60,000,000 gallons of gasoline are consumed in Canada in a year, worth about $16,500,000; 1,259,000 gals. of lubricating oil, worth $1,000,000; 800,000 tires at $20 each, or $16,000,000; other accessories, such as horns, lamps, tools, polish goggles, tire holders, etc., at $5 per car, or $5,750,000, or a total of considerably over $40,000,000.

That the importance of the accessory trade has been grasped by the manufacturer, at any rate, is demonstrated by the really wonderful advance in the making of accessories during the past five years. Among the lines now made in Canada are: Tires and tire sundries, tire covers, patches and cements, vulcanizers, bumpers (only made since a year ago); seat covers, wind shields, lamps (a late line for Canada), lamp bulbs (only last couple of years), flashlights, oils, and greases, oil and gasoline measures, funnels, body polishes, leather dressing,

This is the motor age—everybody is going to drive a car soon, a touring car a tractor or a motor truck.

brushes (within last two years), hardware lines (tools, etc.), automobile clothing, driving gauntlets, etc.; tire chains, tire tools, tire holders, rubber pedal grips; rubber mats, robe rails, foot rests, axle truss, auxiliary radius rod supporters for Ford cars; steerer and radius rod, anti-rattlers, fan belts, license brackets, grease cups, rubber water hose, hose clamps, ignition and lighting cables, wheel pullers, demountable wheel sets, commercial bodies, auto trailers.

"Five years ago the manufacture of these lines was unknown in Canada with the exception of tires and tire sundries," said the purchasing agent of the largest accessory house in Canada.

These facts and figures are presented with a view to showing just how big the opportunity for retail trade is, and to point out to hardwaremen who are not already in line that no time should be lost in getting started.

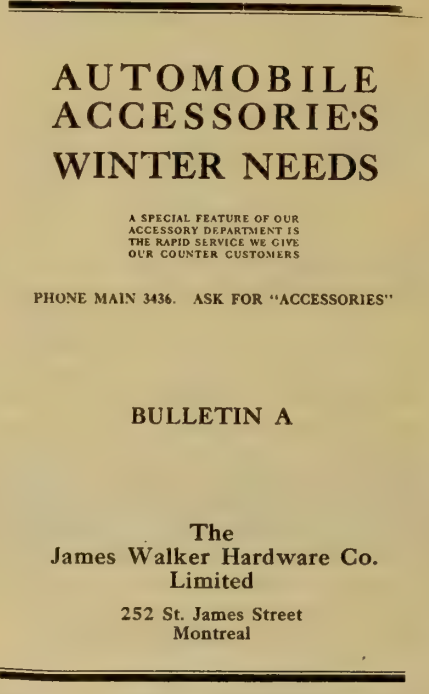
Accessory Dept Getting Into Its Stride

How the James Walker Company, of Montreal, are Making Good in the Accessory Line in Winter When Auto Accessories Sometimes Go Slow—Advertising, Bulletins, a Catalogue

STARTING gear is important to an automobile according to the modern idea. The starting of an automobile accessory department is even more important in the hardware trade. How the James Walker Hardware Co., of St. James Street, Montreal made their splendid start in this line in the fall of 1916 has been told in HARDWARE AND METAL. How this firm is progressing in this line of automobile accessories is the subject of this article.

To begin with it should be understood, and is usually pretty well understood by the hardware trade interested, that business in automobile accessories is not at its briskest and best in the fall and winter. Yet there is much to be done even in the so-called dull season of the accessory business, the season selected by the James Walker firm for making the beginning in this important branch of the hardware trade. That much can be done in winter in auto accessories, much more in fact than even the heads of a large firm may suppose, is proved by the experience of the Walker Co.

"We have done infinitely more business than we had the remotest anticipation of ever doing in this season, and at the outset of our experience in accessory handling," said Mr. M. Hill the firm's manager to HARDWARE AND METAL.



"What lines principally, did you find moving well?" asked the interviewer.

"Skid chains, rugs, robes, rug and robe locks, radiator hood covers and such winter goods went splendidly," was the reply.

"And we never had so big sales in auto and sleigh heaters in the past three years as we had this fall as a result of the accessory business".

Other lines which sell exceptionally well are tire savers, socket wrenches, and rim removers, and non-freezing compound was sold in enormous quantities.

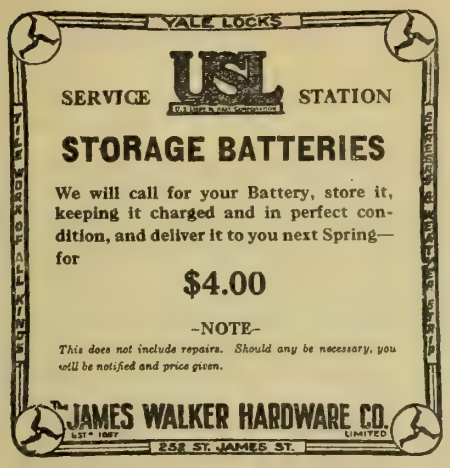
Now there was a reason for the splendid sales of these winter needs for automobiles, a reason besides the good reputation of the firm mentioned, and besides the special effort of the firm's auto accessory dept. to give speed in the service rendered to automobile owners, a point which is too important to overlook.

Cover of Catalogue of accessories issue.

Perhaps in the cover of the pamphlet illustrated "Bulletin A." the first of a series of these planned by the firm's manager, and Mr. Latham of the auto accessory dept., the reason for the good business in the winter lines of auto accessories may be discovered. If you could open the pamphlet as many customers of the firm did open it you would find it fully detailed and clearly illustrated in the form of a catalogue of just such accessories as are required in the fall and winter season by the auto owner. Skid chains are there, radiator and hood covers are there; auto heaters are there, and also the fuel for them. Polish is there for the auto furnishings after exposure to rain and slush spatters. Weather strip for auto windows is shown. Utility jacks, and robe and rug locks are illustrated and described. Prices are given, and at the end of all is added a whole list of suggestions for winter requirements of auto owners which is in itself a sales getter.

This pamphlet "Bulletin A." was mailed to a selected and very well revised list of auto owners secured in the first case from the Authorities Civic and Provincial who keep the registers of automobiles and their owners, and afterwards closely and carefully revised and considered. Nothing was left to chance.

Mr. Fraser the firm's floor manager, and Mr. Latham the Accessory Dept. manager tell of many customers who came into the store with the bulletin pamphlet in their hands and their orders on their lips. Results? Certainly! Direct and visible results. Profitable results too.



This pamphlet idea is being pursued along the same lines, for the coming seasons of still greater activity in the auto accessory business. But more—the baby bulletin A born in the winter is to have a big brother in the form of a splendid catalogue which is now in process of preparation, and which will be before the widest possible circle of trade and individual connections of the firm's soon after the middle of January. When the great range of fresh accessory ideas brought forth by the New York and Canadian Automobile shows have been launched before the public, the catalogue will be completed to contain the best lines developed. At present it is even already a large and most comprehensive catalogue, but it will be better still in a few weeks' time. In size it is to be 7 inches by 9 inches, suitable for slipping into the automobile 'pocket', and a loose leaf edition of it capable of continual change to

bring it up to date is in contemplation for permanent place in the garage. It features on a very large scale the importance of tools. But every possible line of accessories will be included in this 224 page volume of reference for the auto owner, and many other valuable features will be added in the shape of hints etc., such as are needed almost hourly by the autoist really engrossed in his pursuit, and pleased with the mechanical opportunities afforded him by his hobby.

This catalogue will be sent to as carefully chosen a clientele as the bulletin first issued reached. It will go to a still wider field, for the spring is to find the Walker Co. going forth with a force of travelling men into Eastern Canada from Kingston to the Coast with a line of new tires being introduced into this country.

HARDWARE AND METAL asked Mr. Hill if he could point out from his immediate past experience of beginning the accessory business, any difficulties likely to be met with by the trade starting up in this line in 1917.

"Well, fortunately, we have had really very few, I may say no difficulties except such as occur to all businesses in

Copy of advertisement used in the daily papers.

beginnings, and are familiar to all business men," said Mr. Hill "Still I should perhaps indicate as one of the principal possible difficulties in this accessory business, likely to be met with by men starting it up. That difficulty is in the matter of establishing and running a service station for charging storage batteries, and looking after them. This is a branch rather to be avoided by the small man starting up for the first time in accessories. It requires a considerable initial outlay, at least $100, to $150. It necessitates skilled attention, or exceptional powers of natural aptitude towards the scientific side, and I would warn the man starting out in the accessory line to be very cautious in this direction as the requirements of each accumulator have to be separately discovered, gauged, and estimated, and the treatment for each may be entirely different though the ordinary town current can be used when controlled for the store generator and thermostat. As, however, wrong handling may ruin the customers battery very easily, and in a very short time, the branch is one to go into with due and careful forethought, and expert aid.

The James Walker Hardware Co., are champions of well planned publicity, and all their catalogues, bulletins etc., will invariaby be found backed up and introduced by newspaper advertisements. One of their advts. of storage battery service is reproduced also in this article, and is a fair specimen of the direct, straightforward advertising methods of this firm, which by the way, is taking a full 'car space' for accessories alone at the Montreal show in January.

Christmas Trade in Sporting Goods

The Opposition That the Hardwareman Faces in the Bigger Cities and How He Must Meet It—The Success of Retailers in Smaller Places in Handling Sporting Goods

THE CHRISTMAS season offers particularly good opportunities for a rousing business in sporting goods. It is obvious that the demand for skates and hockey sticks will be heavy, but efficient handling of the department will also create good business in all lines —skins, toboggans, snowshoes, punching bags, gymnasium apparatus of all kinds.

The sporting goods trade in the smaller cities and towns is held very strongly by the handwareman. He has, for the most part, a monopoly in some lines and his share of the Christmas trade is large. In the larger cities, however, the specialty sporting goods stores and the big departmental stores cut into the field. The hardwaremen can hold his own even against this high-power opposition—if he handles his sporting goods with vigor and interest.

Unfortunately, all hardwaremen in the larger cities are not giving the attention to the matter that they should. "Sporting goods? Oh, yes, we handle sporting goods for Christmas season trade," said Hardware Merchant No. 1 in an Eastern metropolis to a representative of HARDWARE AND METAL, who had called on him. "We handle sporting goods, hockey sticks, and skates, and pucks, and the winter lines of them, and leather goods, too, boxing gloves, and punching bags, etc.; but they're slow at present, dead slow."

Christmas was not two full shopping weeks distant; the gift buying season was in fullest swing; there was an atmosphere of activity in almost every avenue of retail trade, but this hardware merchant was not enthusiastic about Christmas trade in sporting goods.

"Now if the cold weather would come decidedly," he said more hopefully, "we'd soon have something doing in sporting goods for the winter. We've got all the lines down in the basement. Next week I'll get a window display fixed up, I expect."

"You count on your window display for results?" asked HARDWARE AND METAL.

"Oh, certainly. Always in that line of goods we look to the window for the sales."

"You don't do any newspaper advertising besides dressing a window, do you?"

"No. We gave it up when the war began, and we haven't done anything with it since. We didn't seem to be getting the results we expected from it then. That's why we gave it up."

The HARDWARE AND METAL man made a mental note to return and have a look at the promised window display in about a week's time, and wended his inquiring way farther along the "main stem" of the Eastern metropolis.

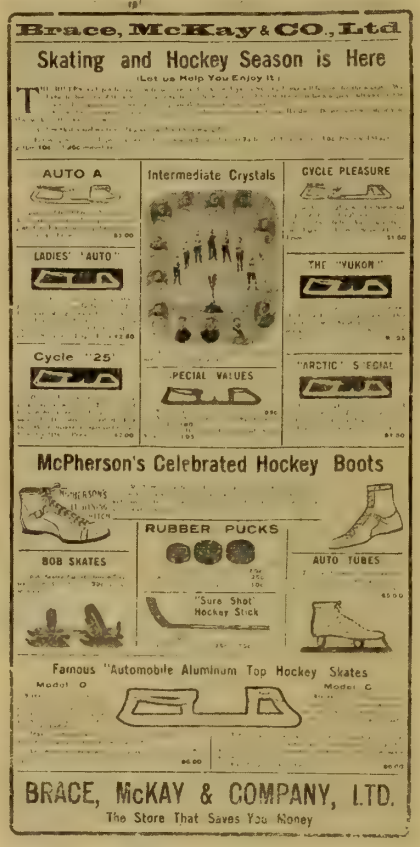
At another hardware store he stopped. There were a few skates displayed in the window. But the proprietor was also unenthusiastic. Too little doing in sporting goods, he said. Oh, he had them all right, and when the weather got more seasonable he'd perhaps show them more, and make more sales. But the big department stores were taking all the people's money now. "Tell you what it is," he said, knowingly, to HARDWARE

AND METAL. "The people go to see Santa Claus, and stay to spend their money. Those big stores have their sporting goods and hardware departments too."

Another hardware store with a very inviting tool and cutlery window, almost opposite to a huge department store—frankly (through its manager) suggested that HARDWARE AND METAL should go to the department stores for his information as to the business of selling Christmas sporting goods. Later on in passing this particular store, the observer and interviewer discovered hidden away in a street level show case under the window proper, a small array of skis, and skates, and toboggans, yes, and shin guards, etc.

Yet another hardware store making a good display furnished the managerial information that "they could not tell whether sporting goods were going to go well this season or not. They would try a few in the window no doubt when the weather got colder. With so many young men away at the front of course it was a good deal of an experiment though." This store had all kinds of sporting goods lines tucked away in odd corners. HARDWARE AND METAL saw football bladders high up on shelves, and hockey sticks stacked in the middle-distance, while skates were also evident, and boxing gloves were lurking behind baseball bats in the far background. But there was no attempt at display window, or within store. The manager, however, would avow faith in nothing but the window display as a selling medium for sporting goods in any season. Advertising he would have none of for such special lines.

To another store went HARDWARE AND METAL still enquiringly. Here there was more hope evinced for sales of sporting goods this season. The management had done well with Skis last winter, and was adding them as a special feature line this year. But until the snow appeared nothing was to be done as regards displaying these. Toboggans, toboggan cushions, skates, pucks, hockey sticks, snowshoes, all these were in stock, and would be duly exposed for sale in course. Much would depend, of course, on the weather. The window was the legitimate selling medium for sporting goods.



In another hardware store which does a big business in many lines (including automobile accessories) and which has a very vigorous live wire management, HARDWARE AND METAL heard still the same story that sporting goods were going slow though the Christmas season was in full swing, but heard also some hints of forceful persuasion in helping along business in this line. Some advertising was done. Skates and skating boots had been advertised, and look here!

The live wire manager showed HARDWARE AND METAL a whole row of skates fitted to boots awaiting delivery to their purchasers.

"That's just this morning's orders," said the manager.

After these interviews with retail hardwaremen the representative of HARDWARE AND METAL bethought him of the words of one of the first hardwaremen he had interviewed on the subject at all.

"The big department stores are getting the people's money. The people go to see Santa Claus, and stay to spend

Here is a firm which believes in advertising sporting goods—Brace, McKay & Co., of Charlottetown, P.E.I.

their money. Those stores have sporting goods and hardware departments too."

Towards the headquarters of Santa Claus in the Eastern metropolis (or at least towards one of the principal ones amongst many "headquarters of Santa Claus" in that city) the inquirer on behalf of readers of HARDWARE AND METAL then directed his steps. What effect had the presence of Santa Claus in the store upon the sale of sporting goods he proceeded to discover.

Here is what he discovered.

Crowds — dense crowds, including all sorts and conditions of humans from mothers with wee babies to young men with and without girls, also girls with and without young men (for it is wartime.)

An immensely busy store, and an immensely busy sporting goods department also.

"How are our sporting goods going at present?" repeated the manager of the sporting goods department of the big store to the interviewer. "They are going so fast that I can hardly get goods enough to replace them as I sell them."

"What, and in this weather?" asked the interviewer. "You don't mean to tell me you are selling snowshoes, for instance, or skis in this open weather?"

"Oh, yes, but I do. Snowshoes, and skis, and skates, and toboggans, yes, and children's sleds—the sleds especially so fast that I cannot replace them quick enough."

"Boxing gloves and punching bags and such things too?" asked HARDWARE AND METAL.

"Oh, yes, any amount of them, for Christmas gifts I suppose, some of them, and some straight to the men who are to use them I know. All kinds of sporting goods are selling splendidly right now.'

"You advertise them, of course, in the store's usual space in the daily papers, don't you?"

"This department gets its share of the advertising space used, certainly."

"With special results do you think?"

"With results direct and certain I know," was the reply. "There have been advertisements for skates, for instance, which have brought crowds of buyers the next day. We have the goods at the price the people want to pay for them. That's the whole secret of making sporting goods or any goods go. The main thing is to **get after the people with the goods.**"

What Can be Done.

It follows that the retail hardwareman in the big city can get more business in sporting goods if he goes after it right. The interviews quoted above are not typical of all city stores—not by any means. There are plenty of retail dealers in the bigger Canadian cities who are "live wires" in the fullest sense of the word and who are doing big business in sporting goods. But there also are many dealers who regard the question as do those seen; and to dealers of this class this article is directed.

—⚙—

Major Bartlett McLennan, president of the Williams Manufacturing Co., of Montreal, in a letter to friends in Montreal, states that he will sail soon for Canada, having secured three months' leave following his recent accident in France. Major McLennan, in addition to his connection with the Williams Manufacturing Co., is a director in the Canadian Explosives Company, of Montreal, and the Montreal Telegraph Co..

Meeting the Sportsman on Common Ground

By Edmund Doremus

AT best most business is prosaic. In nearly every type of retail store, however, may be found a department in which the stock, though not a necessity to the customer, is that end of the business through which the salesman may get a little closer to his customer and help him forget the hard drudgery of ordinary things. The grocer displays in the front of his store a selected line of vegetables, fruits, jellies, etc., put up in glass; the dry goods man always has a fancy goods table and the druggist excites the desire for new and attractive things by an effective display of toilet articles. May we not call these branches of the stores, the flowers—the bright spots that appeal more or less sentimentally to the customer? Are they not the avenues by which the salesman may become better acquainted with the customer, and may they not often be the means of securing a new customer for the more staple and steady merchandise? A housewife will remember a delicious glass of candied cherries or a bottle of queen olives much longer than a bag of sugar.

But what department presents the "Smile" in the hardware business? Through what end of your store can you buttonhole a man and chin with him on matters that have interested you both since you were boys and will be of interest as long as you can shoulder a gun and cast a fly? I have said it—The Sporting Goods Department.

Probably 99 out of 100 hardware dealers locate their Sporting Goods Department at the front of the store, because the articles make an attractive display. They are easily arranged and sure to call to mind some memory of the past or anticipation for the future. A customer comes in the store—perhaps a new one—and waits for some one to wait on him. As you approach you notice he is looking at a new fly or reel, or an attractive bit of advertising on the counter. This is the time to get close to this man. Show him the advantages of the fly or reel, or if it is the picture of the hunting scene that interests him, tell him something about the game, where to get it and what it is shot with. He may know more about the subject than you but that will make him talk and if you are a good listener you will have won a friend for your business. Men always have time to talk sport. Boys haven't time for much else. Many a man buys his hardware from A. B. C. & Co., because when he was a lad, old Mr. C. had time to show him how the new pump action .32 rifle worked or was willing to let him get the feel of a baseball mitt.

The unusual popularity of the average manufacturer's representative in any sporting goods line is undoubtedly due to the fact that he has had actual experience in field and stream or has been a star at hockey or baseball. He knows the game and can talk it and if you are a red-blooded man you enjoy listening to him. Is there any work in your business that affords more pleasure than looking over the salesman's sporting goods samples or mulling over a new catalogue? Just so with your customers. The man who comes into your store for nails will go away with a better taste in his mouth if you have shown him something new in connection with hunting or fishing, and he'll come back again for nails, because he remembers that he likes to go into your store. It is easy to make a sporting goods department the vehicle of keeping customers satisfied and getting new business, and it is profitable, not only for the general hardware line, but for the sporting goods department as well.

Too much cannot be said in regard to the advantages to be derived by the dealer and his salesmen from actual experience with guns, ammunition and fishing tackle. The big outdoors not only makes a man physically fit but it also broadens one mentally. After a week in the woods how much greater is the enthusiasm when selling a high power sporting rifle or a split bamboo fly rod. Personal experience adds much weight to suggestions of equipment necessary for any kind of a sporting enterprise. Being well known as a sportsman means being well known as a sporting goods man.

You are happier as the result of a successful day with the gun that he bought in your store and he will not forget where he bought the gun when he is showing it to a friend. Is not the Sporting Goods Department then the "Smile" in the hardware business. Keep smiling.

Hamilton, Ont.—Cummer Dowswell, Ltd., are extending their plant in both manufacturing and storage departments. The additions when completed will increase the floor space about 35 per cent.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, DECEMBER 16, 1916 No. 51

WHAT use are coppers nowadays anyway? We'll soon be making small change with quarters.

* * *

PERHAPS in 1930 we will look back wonderingly at the day when nails were $8.00 and turps $1.50. Who knows?

* * *

LLOYD GEORGE should be able to take out his card in the carpenter's union. He is a finished cabinet maker.

* * *

THE KAISER is willing to make Poland and Lithuania separate kingdoms. Probably also Francesco Villa would be willing to hand California over to Japan.

* * *

BUSINESS is so good that some men regard more orders with apprehension. And back in 1914 . . . . but why think of those dead and gone days of panic, passion and pessimism?

A BUSINESS GOVERNMENT

THERE may be those who think that a business paper should not concern itself with anything of a political nature. This belief is based on the idea, unfortunately true, that politics and business are entirely separate and distinct. It is the firm and earnest belief of HARDWARE AND METAL, however, that no matter what politicians may have done in the past, *government* and business should be closely allied to the extent at least that government should be carried on along business lines.

An outstanding fact about the new British Government of Lloyd-George is that the cabinet is made up of men selected for the most part because of their aptitude for the particular work placed in their hands. Cabinet selections as a rule are based purely on political expediency. Lloyd-George has fallen into this custom in a few instances but his appointees are for the most part men of outstanding power. That he has gone outside the pale of politics and selected business men for departments which require business experience and ability, is the surest indication of his earnest intention to construct an efficient governing machine.

HARDWARE AND METAL believes that the control of affairs in Canada should be made equally as efficient as it is hoped the new British government will prove. This would not be accomplished by turning the present government out and replacing it by a Liberal government constituted also along purely political lines. Neither would the desired result be obtained by a coalition cabinet made up entirely of political leaders from both sides. Only could it be done by a shaking up in the personnel of the cabinet, selecting for each portfolio the one man in Canada best fitted for the work whether he be Conservative or Liberal, politically prominent or comparatively obscure, lawyer, business man or mechanic.

It would be a radical step; but precedents have been provided in Great Britain and France. War is a great provoker of radical steps and sometimes, as a result, of great improvements. The dire necessity that has shaken nations out of slothful tradition and easy-going ineptitude, is felt in Canada. We must do our best, our very best, to win the war.

AN OPPORTUNITY IN ACCESSORIES

ALTHOUGH the advance in automobile construction and particularly in the matter of cold weather accessories has made it feasible to use cars the year around, the average car is still "laid up" to some extent during the winter. An opportunity is thus created, and taken advantage of by every owner, to have tires thoroughly overhauled for the heavy work of the succeeding seasons and to give the car a general "going over."

It is obvious that this situation creates a special opportunity for the sale of accessories of all kinds. Tools will be needed for the "tinkering" that most owners will be pretty sure to undertake on their own account and, as the tire casings and tubes will be needing repairs, there will be a special demand for tire vulcanizers. This demand will be felt most particularly during the next month or so. In fact, a vulcanizing outfit would make a practical and very ac-

ceptable gift to a motorist. They can be obtained anywhere from $1.75 to $3.50. Why not turn your store machinery to creating a demand for such lines as Christmas gifts?

"TO THE ADVANTAGE OF THE COMPANY"

THERE is no surer back-firer in the world than a derogatory word spoken against a competitor. It is a veritable boomerang, and while the utterer is eagerly watching to see its effect, it is more than likely to come whirring back to spill his own business brains about the shop.

It is a natural impulse perhaps, to decry anyone who walks the same path of life with us.

Everyone hankers to be the big frog of the puddle, and to have his own voice the loudest in the choir of the pond. That's human nature; human nature too, perhaps to suggest that bull-frog No. 2 is singing off the note if he seems to be attracting more attention than we. But it is human nature based on the fallacy that there is only one pond and only one degree of success.

To try to undermine your competitor was an accepted system of early business. But new business ethics and a widening of the business horizon have proved that it is neither good ethics nor good business. You can't point out the beam in your neighbor's eye without drawing unusual attention to the mote in your own. You can't undermine the public confidence in your competitor without in some degree injuring yourself. Silence in itself bespeaks success. It is a sign of inferiority to whine.

One large merchandizing company expresses the idea in these words:

"It is the policy of the company to obtain and hold its trade by offering extensive variety, constant supply, careful selection, fair prices, uniform treatment, prompt attention and absolute reliability. Accordingly you should rely on these points in soliciting business, and be careful to refrain from criticising and making derogatory remarks respecting any of our competitors, even though it should be called to your attention that some of them are engaged in unfair tactics. Such an attitude on your part, maintained constantly even in trying circumstances, is sure to win the respect of the trade and react strongly to the advantage of the company."

There is the gospel of the soft answer opposed to the big stick—not on the word of a preacher, but on the word of a business man. It is good business to speak no evil of your neighbor, it is "to the advantage of the company."

THE MARKETS AGAIN

LAST week in the paint markets, HARDWARE AND METAL predicted an advance in the price of white lead ground in oil, as follows:

"White lead in oil looks ominously like breaking its own high record, though linseed oil is a shade quieter this week, and in slightly duller market. Lead, however, is very firm and the outlook is certainly for an increase in price of white lead in oil."

By reference to the paint market pages in this issue it will be seen that the prediction has been very amply verified. White lead in oil has gone up this week fifty cents. Again, in last week's "Markets at a glance," appeared the following:

"Still higher prices may be expected soon on iron pipe, scoops and shovels, galvanized and black sheets, lead products, stoves, lawn mowers, white lead in oil, wire nails and fence."

That the predictions thus confidently made were based on a sound knowledge of the market is demonstrated in the very significant fact that this week HARDWARE AND METAL announces that wire nails have gone up 35 cents, and lawn mowers 12½ per cent., and that increases have been announced in iron pipe, fence and lead products.

The fact that HARDWARE AND METAL continually forecasts the trend of prices and thus gives the buyer an opportunity to "cash in" on the advance information thus supplied him is not, however, the most important part of the market service after all. The great fact about our market service is that it gives all the changes of price as they occur, that it contains full and authoritative quotations on everything the hardwareman carries in stock, and that he can get whatever information he may need by referring to the weekly reports. HARDWARE AND METAL'S market service is complete and reliable.

Are you getting the fullest benefit from it?

TRADE ACCEPTANCES AND THE RETAILER

AN Atlanta, Georgia, bank has been sending out a circular to all wholesalers, outlining to them the advantages of a trade acceptance over the usual open account. The wholesaler shipping a bill of goods, in many instances merely sends an account. This statement is of doubtful commercial advantage in the eyes of the bank. It is open to dispute, subject to reductions, and consequently is not acceptable at its face value, save at a high rate of interest. Many adopt the method of getting trade acceptances. They send out drafts with their statements. These drafts properly endorsed, whether they are drawn at sight, at 60 days or whatever time, are a definite acceptance of responsibility for the account as it stands, and as such are much more readily negotiable by any bank at a much lower rate of interest.

Is not this also a suggestion for the retailer? Experience has proved that the retailers credit accounts show a very considerable margin of loss. Many a dealer needs accommodation that the bank could give on the security of his accounts, did they know that there was any surety of collection.

Taking Inventory at Original or Present Cost

Merchants are Divided as to Whether Allowance Should Be Made for Appreciation—Suggestion That Goods Be Taken In at Present Values and Percentage Taken Off—Real Estate vs. Bank Profits

Based on Interview with T. E. Aikenhead President Aikenhead Hardware Co., and other merchants.

WIDESPREAD interest was awakened in the trade by the announcement in last week's issue of HARDWARE AND METAL that an article would appear dealing with the basis on which it would seem wiser for the merchant to estimate the value of his stock in connection with the annual inventory.

This idea touched a vital point. To some it came as a statement of an entirely unthought of problem, but one they recognized at once as of the utmost importance. Others it found in a condition of bewilderment at the many puzzling aspects of the case, for in this as every other turn of this war, the kindly help of precedent has deserted us. In a third class were some merchants who have been pondering this subject carefully and have at length arrived at a conclusion.

It may not be comforting to the average reader who is looking for light to be told that these last conclusions are as wide apart as the poles. This has made the investigation of HARDWARE AND METAL more than ordinarily difficult, but while we will not attempt to lay down a set rule to govern every business, we believe that out of the varied views presented and the reasons that underly them, merchants will be assisted, at all events, in working out a safe basis for what most of them are coming to consider is one of the most important decisions with which they are faced today.

To do this we regard as our plain duty to our readers; to venture beyond it by laying down any categorical rule would be to assume the superhuman wisdom of an oracle.

There are, of course, the two main classes: those who are strong for taking in stocks at the original invoice costs, disregarding any appreciation that has come to the goods during the time they have lain upon the shelves. The other class cannot see why they should not take—on paper—the extra profits, due, as they claim, to their wisdom in buying far in advance, or to the sudden upward movements of the markets in a limited period.

To this the obvious reply of Class No. 1 is that "You should not count profits until you sell the goods. The market may drop in the meantime and then where will you be at? You will only have to acknowledge that your boasted profits existed only in a mental condition."

HE USED TO TAKE AN INVENTORY

A member of the staff of HARDWARE AND METAL was calling on one of the best known of the small town merchants in Canada. He had made a success of his business, and was now enjoying the results of this.

"How are you planning to fix values when you take your inventory this year?" was asked.

"I never keep an inventory," was the reply. "I don't need to. I own the whole of my stock; I have money in the bank; I can give a cheque for anything I buy,—and don't feel like being bothered about finding out exactly what stock I have."

"But didn't you ever take an inventory?"

"Oh, yes," was the decided response. "I did for years. I had to then. I was building up my business then. I didn't own it all. I had to do it then as a measure of safety. Now it doesn't matter to me whether I have a $10,000 or a $15,000 stock. It did once,—when I didn't have that much."

"What would you do if you had a fire?"

He laughed. That was a little different.

"What I should do would be to bring before the adiusters a number of the wholesale travelers and ask them to estimate the value of the stock I had on hand.

The original practice of this merchant, and the fire argument, we would combine as a double reason why the inventory should be taken this coming January,—and every January thereafter.

According to Market Fluctuations

"Granted," is the retort. "But we raise or lower our costs and selling prices according to the fluctuations of the markets. We would be following suit in the case of the inventory. And, again, we have always gone on the principle that our stock was worth what we could get for it at a sale; and certainly the basis of this would be the cost in effect at the time of the sale."

And so the argument has been going on, as HARDWARE AND METAL found it, like battledore and shuttlecock.

It remained for the president of the Aikenhead Hardware Company, of Toronto, T. E. Aikenhead, to step out into a somewhat different material atmosphere for an illustration, in championing the practice of cutting down the inventory absolutely to a basis of the original cost price. He was referring to a friend who was just as strong on the opposite side.

Real Estate Profit (?) of $2,500

"It reminds me," he said, "of an acquaintance of mine some time ago. He had bought 100 feet of land and had paid $50 a foot for it. Soon after, the lot next to it sold for $75, and he triumphantly said to me, 'I've just made a profit of $2,500 on that land of mine, don't you see?' I did not, but he went on figuring out his profit that way. Some time later I came across him and jokingly asked him how he was getting along with that profit of $2.500 that he had cleared on that land. 'Oh,' he said, rather sadly, 'that wasn't profit after all; I couldn't sell my land to-day even for what I paid for it."

"No," continued Mr. Aikenhead, "it never has seemed to me a safe business proposition to figure profits until they were ready to place in the bank."

When Steel Tumbled 26 Points

"Now, let us look at that argument about the real value of the goods. How long do we know that prices will keep up? One of the best illustrations we could have had of the uncertainty of the 'war' markets in spite of the theories based on war, was what happened

yesterday (Tuesday of this week) on the announcement by the German Chancellor of preposterous terms of peace. Bethlehem Steel took a drop of 26 points. Imagine what would have happened to the market if there had been any real basis behind the talk of peace. Imagine what will happen when there is a real basis.

"And we must remember that the stock and the steel markets are the two best barometers we have as to prices, not infallible, but the best available. The price of steel determines in the main the price of food and of cotton. For the war will be won by steel.

"That is the way I feel when a merchant tells me that he has made $50,000 simply by holding on to his stock. That isn't what it is for. He bought it to sell. Why doesn't he sell it, then, and wait until it is sold and the profits received actually before he begins to count that $50,000?"

How to Figure Out Cost Price

Once the principle of taking in his stock at the actual cost had been determined, another big problem confronted this firm, as it will every merchant—how to arrive at the cost price of the goods?

In normal times this should not be difficult, and is not where there is any sort of system in keeping track of the buying of the goods and the prices as they were in force at the time. But now it is vastly different. Here are nails. Some were bought perhaps as low as $3.90, and the last lot may have cost over $4.50. Perhaps you have three or four lots of these, if you bought heavily anticipating the raises that came into effect repeatedly. Will you take them all in a lump at the original, or at the last purchase price, as you have mixed the different lots? Or will you, as one merchant suggested, average up the different costs?

The following plan was decided on after a consultation of all the heads of departments in the Aikenhead business: **That the inventory should be made on the basis of the cost price as existing at the time of taking the inventory. From the total of the various groups a certain percentage should be deducted as representing the estimated increase in the value of the stock since the goods were bought. This reduced total would be the inventory value of the stock—in other words the actual cost or invoice value.**

No chance here for that real estate "profit" of $2,500, or the $50,000 that looks all right now, but on the near approach of the ending of the war may banish in an instant as did the 26 points of Bethlehem Steel.

Reduction Percentage of 20, 25, or 30

This percentage of reduction will vary with the length the goods have remained in stock. One merchant who was asked about this point figured out that his would run about 20 per cent. That is, that he would have to take off one-fifth from the gross total, reducing a $10,000 stock to $8,000. This would mean that the $8,000 stock had increased to $10,000—an increase of 25 per cent. So the old question comes up here, 20 per cent. of the one is equal to 25 per cent. of the other.

Why did this last named merchant figure on 20 per cent. reduction? Simply because he turns his stock on the average five times a year, so that he feels that not much more stock stays for more than 2½ to 3 months before it is sold. This is a quicker turnover than is secured in most stores, so that those whose stock dates much farther back than three months would have to increase the reduction to say 25 per cent., or even 30, and in some cases a higher amount. If the 25 per cent. was chosen it would mean that the stock on the basis of the cost price had increased in value 33 per cent. If he takes 30 per cent., this would figure out as an increase in the original cost of 42 per cent.

In arriving at this reduction percentage as we will call it, some merchants may be able to estimate it fairly accurately from their intimate knowledge of their stock; others may prefer, as one merchant suggested, to work out the per cent. by taking certain "blocks" of their stock and going into the actual advances in detail with these and thus applying it to the whole of their stock.

This deduction method is one of the simplest that has been presented to HARDWARE AND METAL. Any attempt to keep track of the separate cost prices where these have changed so rapidly, and purchases have been made more frequently than usual in order to "get in" on a price before it should go up, would seem to result in endless work and almost endless confusion.

In next week's issue, HARDWARE AND METAL will continue this discussion and reproduce a simple form for an inventory, and will also take up the point of the relation of fire insurance to enhanced values of stocks.

RAISED INSURANCE 25 PER CENT.

A natural outcome of the realization of the increased value of the stock of the hardware merchant through advances in the markets should result in a considerable increase in the fire insurance carried. Mr. Aikenhead during the interview with HARDWARE AND METAL stated that his firm after going roughly over the stock decided that in safety they must add 25 per cent. to the old policy, and this was done.

In a future issue we will show the serious loss a merchant may suffer in case of fire, under the co-insurance clause, if he fails to keep pace in the case of his policy with the advance in value of his stock. And this will happen even if the damage from fire falls far below the total of the insurance carried.

SIX PRICE CHANGES IN A ROW.

One merchant who buys largely gave HARDWARE AND METAL an illustration of the difficulty in figuring out the actual cost by going back to the original invoices.

"I gave an order for a large number of files in June last," he said. "Since then deliveries have been trickling in, and the prices charged me have changed just six times on those deliveries."

This incident gives point to the suggestion in this article that goods be valued on present cost basis and a percentage taken off this to cover the appreciation.

EMPIRE TRADE BANK PROPOSED

THE Department of Trade and Commerce Ottawa has received from the Committee on Financial Facilities for Trade appointed by the British Board of Trade, a memorandum outlining the committee's recommendations for a trade bank for the Empire. The committee contemplates a trade bank under Royal charter to fill the gap between the home banks and the British foreign banks and banking houses, and to develop facilities for inter-Imperial trade not provided by the present banking system. It is recommended that the proposed bank should have a capital of $50,000,000; should open current accounts and a credit department for those opening up business with other parts of the Empire, should inaugurate an information bureau; should become a centre for syndicate operations; should receive Government assistance and should have power to establish branches or agencies where no British or foreign bank of importance exists.

Special Appeal to Ontario Retail Hardwaremen

Secretary of Ontario Retail Hardware and Stove Dealers' Association Points Out Dangers of Present Situation—Lack of Retail Organization.

Editor "Hardware and Metal,"
Toronto, Ont.
Dear Sir:

Through your valuable columns, I would like to make a special appeal to the hardware dealers of our Province for increased interest in the matter of organization for the welfare and protection of our particular branch of business.

It must be conceded that we are now entering upon a most critical time in the history of our business life, a time when concerted action is more than ever necessary to keep our affairs in a healthy state pending the return of normal trade conditions.

With wholesale costs now exceeding in a great many lines the maximum retail figures of the past year, it must be apparent that to secure the same percentage of profit as formerly is impossible. More lines are continuously being added to the range which are being sold at a less profit than the cost of doing business, especially where local competition keeps prices down as long as any old stock lasts. This is deplorable and unnecessary, did proper conditions prevail. We all realize, when reading our morning's mail, the effect of organization in the manufacturing and jobbing branches of business. "Advanced Price" notices are received from wholesalers and manufacturers, all on the same basis. Their being organized enables them to get advance on prices as they occur on all stock on hand, excepting booked orders.

The lack of organization in the retail trade is shown in an almost absolute disregard of new values and the disposal of stock at prices below which it can be replaced.

W. F. MACPHERSON,
Secretary Ontario Retail Hardware and Stove Dealers' Association.

Now, Mr. Retailer, where will it all end? Within a year at the outside our stocks will contain all high cost goods, goods which will be sold at a lower rate of profit and, no doubt, in curtailed quantities. Then, when the decline comes, what will happen? Will the consumer, out of sympathy for you, pay a higher price than the then market value? Don't think it for a moment. Dependent on the real or fictitious nature of the advanced prices maintaining, so will the declines come, gradually or quickly. In either case, profits are sure to suffer. Are you preparing for that day? Get ready now. Get and keep your cost prices up to date. Take your profits now on the up-to-date costs. Get in touch with the other dealers in your district and agree to do business on business lines. They are just as anxious for a profit and safety as you are, and only need approaching half way to overcome the conditions which are prevalent in too many places. With the trade properly organized, this competition would be largely eliminated. It is for this greater organization that I make this appeal.

In the Ontario Retail Hardware Association may be found the nucleus of a grand organization. It is now rendering a service which has trebled the membership in two years. With a highly appreciative body of business men behind it, it surely merits your support. During the past few months, many Price Lists have been issued, giving net cost figures on various lines of goods, which would involve a great deal of time for the individual merchant to figure out. Consequently, it is often left undone and guess prices prevail in too many cases. One of our members with a large business wrote me a few days ago "Your last set of cost sheets surely made me sit up and take notice." Too busy to keep up the new costs until he got a shock, and there are many shocks coming to dealers all over the country when they realize what the goods they have been selling will cost to replace. These costs are now furnished to members of the Association on many staple lines, and, as the membership grows, so will the service.

I trust that this appeal for better organization may, with the many possibilities for future usefulness, be the means of an appreciable increase in our ranks. "In union there is strength."

Yours sincerely,
W. F. MACPHERSON,
Secretary, O.R.H. & S. D. A.

No Room for Mystery About Prices.

From *The Cordage Trade Journal.*

ONE of the strange ideas that some otherwise sane business men hold is that current market values are something akin to state secrets, and should be surrounded with all kinds of mystery. It is amusing to observe some of the lengths that those who hold extreme views of this kind will go to prevent (as they think) current prices from becoming known. Some concerns go so far that they issue no price-lists whatever; will not give a price to even their largest customers over the telephone, and will only give a few prices at a time to their regular trade. They treat their customers as if they were not to be trusted with prices which have a vital effect upon their customers' own prosperity.

During the last year and a half there has been a general upheaval in prices and values such as has not been known in the history of the commerce of the United States for over forty years, if, indeed, the changes have ever before been paralleled. Prices have advanced rapidly, and all kinds of relative values have changed. Merchants and distributors of all kinds have been hungry for information that would enable them to adjust their affairs to the new and constantly changing conditions. Buyers of all kinds have felt that they must be possessed of the most complete information obtainable so that they could intelligently handle the situation, and obtain adequate prices for the goods they sold. Trade newspapers have done their utmost to obtain and print promptly all advances in prices, and data concerning the reasons for such advances.

Strange to say, some manufacturers have failed to give even formerly customary information to their customers, and have utterly failed to co-operate in the slightest way with either their customers or the trade journals in the circulation of information that would tend to prevent manufacturers, jobbers and retailers being called indiscriminately unholy "trusts" formed to gouge the ultimate consumer. *The Cordage Trade Journal* wishes to acknowledge its indebtedness to those members of the trade—manufacturers and jobbers—who have co-operated with it by supplying market information to it so that conditions could be accurately reported.

Now, this condition of a lack of co-operation between manufacturers and their customers and the trade journals has become so apparent that the National Hardware Association of the United States has been forced to recognize its existence. In the December 2 issue of the *Hardware Age*, New York, appears the following appeal to manufacturers from the National Hardware Association:

"Philadelphia, Pa.

"To the Manufacturers:

"A number of distributors have found themselves at a disadvantage in selling by reason of the fact that in numerous cases where manufacturers have withdrawn prices they have not quoted new prices or indicated the extent of the advance in price which has occurred.

"This has required special correspondence and considerable delay for the members of the association to get new discounts.

"It is, therefore, the request of the members of the association that where manufacturers change prices they immediately notify the jobbing trade and if possible in withdrawing previous quotations, give the revised prices.

"If it is not possible to give the revised prices, the suggestion is being made that some indication of the percentage of advance be given so that the wholesaler may not be in the position of selling his merchandise at prices which may, in some cases, be lower than the cost of replacement.

"Respectfully yours,

"T. James FERNLEY, Secretary-Treasurer.
"National Hardware Association of the United States."

This is a very reasonable request on the part of the association, and it is a strange thing that any such request should be necessary at all, for the average observer would expect manufacturers to recognize the importance and value to themselves of doing just what Mr. Fernley requests; but *The Cordage Trade Journal's* own experience with some manufacturers indicates that the request is only too badly needed to arouse some manufacturers from a state of torpidity that may in the past have cost them heavily and may in the future cost them even more than it ever has done before.

In circulating information concerning markets there is no more efficient medium than a properly conducted trade paper. *The Cordage Trade Journal* is always ready to co-operate with manufacturers in promptly circulating information concerning market prices and conditions.

Some manufacturers seem to think that any reference in print or otherwise to their prices is injurious, as giving competitors knowledge that they should not have. Of course, real big manufacturers do not feel that way; but sometimes even big manufacturers act as if they did because some of their short-sighted jobbing friends ask them to prevent their prices from becoming known except to a "favored few;" each of these few would, if possible, restrict the information to a "favored" one, himself. Some manufacturers allow themselves to be unwisely influenced by such selfish customers, and inflict injury on their other customers and themselves unwittingly.

On the question of giving information concerning prices, the following from HARDWARE AND METAL, an enterprising Canadian weekly trade journal, on the subject of advertising prices is pertinent:

"In last week's issue appeared an article on the question of trade agreements not to advertise. The folly of these agreements is pointed out so clearly that further reference to the subject is not necessary here. One point, however, will bear further reference, and that is the question of advertising the prices of goods.

"There are still plenty of merchants and manufacturers who believe sufficiently in advertising to do a certain amount of publicity work, but who nevertheless do not believe it advisable to quote prices in their copy. Their reason generally is that they are afraid of giving information away to their competitors.

"This is quite futile caution, for competitors can find out all about prices anyway; and do. The fact of the matter is that, in advertising, a business man should think of nothing else but the people he is advertising to.

"And the only way to get the attention of the public to-day is to quote prices. People want to know all about an article before they buy it and, first and foremost, they want to know the price.

"How much business would the mail order houses get if they did not price every article in their catalogues? Instead of operating from fifteen-story buildings they would be sending out puny circulars from dinky offices up back stairs."

Manufacturers and others should never forget that producing goods is not all that is demanded of them, but that it is necessary to make markets for them, and they can never attain the best results unless they co-operate intelligently with competent distributors. They may be selling a considerable quantity of goods through poorly equipped distributors; but by employing fit distributors and working in harmony with them they may increase many fold the resulting profit to all concerned.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The big advance in the price of wire nails and all wire products has been only one of many outstanding features in a week crowded with important price changes. With the exception of linseed oil, which declined 5c, all changes are in an upward direction and include heavy advances on Manila and sisal rope and products. White lead in oil, turpentine, pumps, sash cord, seine twine, handsaws, bucksaws, cross-cut saws, sand paper, files, lawn mowers, crow bars, hitching weights, splitting wedges, saw wedges, scales, black and galvanized pipe, wire nails, O & A wire, hay baling wire, bale ties, fence staples, fence hooks, stove pipe wire, fence wire, screen cloth, cotton rope and twines, weigh beams and scales, revolvers, skates, sink bolts, lead, tin. The foregoing list is not by any means complete for the week, but indicates the great variety of goods affected by price changes this week. That many lines, such as wire nails and wire products will go still higher is almost certain. Wholesalers are advising retailers to buy carefully and not overstock. Despite the high prices, business is remarkably good. The outlook for Xmas trade is very satisfactory and many lines are moving freely. There is a scarcity of many lines of cutlery, skates, sleighs, etc.

MONTREAL MARKETS

MONTREAL, Dec. 13.—New prices on pipe out this week again serve to show the tremendous truth of the trend of all iron prices upwards still. Further increases in wire and in nails are announced also. The whole market for all goods made of iron and steel is in a condition of such firmness that it will surprise nobody if any of the lines which have advanced this week, or any other lines advanced this week or not, make still further advances again within a few days. The mere flutter of market pulse which steel experienced when there were peace proposals in the wind did not for an instant affect the manufactured product even at the factory, far less in the field of the wholesale and retail trade. Many lines besides steel goods show advancing tendencies and actual advances this week, while holiday trade proceeds briskly to its little spell of quieter hours when the holidays arrive. The outlook for the incoming year is more and more settled seemingly to firmness in the world of hardware and metal goods and all their associate commodities.

A Striking Summary of Steel Situation

IRON AND STEEL.—Although peace rumors sent steel shares down, prospects for prices and deliveries in the whole range of iron and steel goods remain as serious as ever. One important firm in the U. S. A., makers of many lines of steel and iron goods, in a circular letter to the wholesale hardware trade, says that orders cannot be shipped in under four months, and may take six months to deliver, and that prices are at present unsatisfactory, and subject to further increases at any moment. The price of steel bars has advanced 160 per cent. in the past two years. Scrap steel is going to $25 per ton, and pig iron to $30 at least in the States. This would mean a 50 per cent. advance since the bar price was put into effect. Soft coal, which used to cost at the mine head $1.25 a ton, is now $6 a ton. Unskilled labor, formerly available at $1.50 a day in plenty, now costs $3 a day, and is scarce. That owing to the prices of wheat and corn having doubled, labor will be still more costly, is the opinion expressed in the same circular. "We are not taking any business from new customers," states this firm, "and even without new business, it is impossible to keep our own customers supplied promptly, partly because of increased sales to these customers, and partly through scarcity of material, lack of labor and embargoes on expected shipments." The firm advises customers to consider their wants for six months ahead, and order for delivery at that time, saying that only small orders can possibly be handled in any shorter time, and then only for very good customers. Another important point in the circular is to this effect: Dealers must recognize that the former standards of values for hardware lines are of no use at all under the new conditions. "A hatchet or a hammer which formerly retailed at 75 cents is cheap today at $1.25," says the circular, and retailers are advised strongly not to hesitate to ask the full advance in price on their goods, even though they themselves bought the goods years ago at the old standards of price. The farmer and mechanic, says the circular, are getting double the money they used to for their product or services, and dealers need not dread increasing their prices lest the "bubble may burst." The prediction is definitely made in the circular that present conditions and prices can hardly avoid maintaining for at least two years yet, and perhaps for longer. The precedent of the Civil War conditions, which raised prices 300 per cent., is cited, and the fact that the influx of gold to this continent has depreciated the dollar (in other words, raised the price of commodities) is pointed out. It is also pointed out that the destruction of iron and steel manufactured materials and commodities is far more rapid now than ordinary wear and tear, and the struggle is to replace the destroyed materials fast enough with depleted constructive forces. "As long as present conditions prevail," concludes the circular, "prices will inevitably continue to advance, and most especially the prices of tools made by skilled labor from steel."

Iron Pipe, Lap and Buttweld Up Again

IRON PIPE.—Further advances are recorded in iron pipe this week, standard lapweld and buttweld pipe S.C. being all considerably advanced as compared with last week's quotations, and immensely advanced as compared with quotations earlier in the year. These advances have all been duly predicted in HARDWARE AND METAL, and this latest advance was predicted several times. The new prices will be found in current quotations. Both black and galvanized pipes are included, and there is no reason to think the market has at all reached high level yet.

Wire Nails and Staples Advance

Wire Nails Up 30c

WIRE NAILS.—New prices on nails are again issued, the following being the base prices quoted: F.o.b. Montreal, Gananoque, Collingwood, Owen Sound, $4.75 base; f.o.b. Toronto, Hamilton, London, Milton, $4.70 base; f.o.b. St. John, N.B., Sidney, N.S., $4.75 base.

Fence Staples Also Up

Bright fence staples are advanced again this week. Bright now cost $4.85 per 100 lbs., and galvanized fence staples cost $5.70 per hundred.

Many Lines of Wire Show New Advances

WIRE.—Many lines of wire show advances again this week. Plain twist wire is now quoted at $6.10 per 100 lbs.; coil spring wire, No. 9, is now $5.55, and No. 12 is $5.70 per 100 lbs. Barbed wire is quoted at $5.50 per 100 lbs. Following prices are quoted in Montreal for plain galvanized wire:—Nos. 4 and 5, $6; Nos. 6 and 8, $5.95; No. 9, $5.50; No. 11, $6.05; No. 12, $5.65; No. 13, $5.75; No. 14, $6.45; No. 15, $6.85; No. 16, $6.95. In car load lots these wires were quoted ten cents cheaper. Hay wire, No. 13, is quoted at $4.90; No. 14, $4.95, and No. 15, $5.05. Five cents less was asked for car load orders. Cut hay wire prices are as follows this week, also increased:—No. 9, $4.85; No. 10, $4.90; No. 11, $5; No. 12, $5.10; No. 13, $5.10; No. 13½, $5.20; No. 14, $5.35; No. 15, $5.40 per 100 pounds, all plus 7½ per cent.

Bale Ties Also Increased

Bale ties are also increased: No. 12 are now priced $5.30 per 100 lbs.; No. 13, $5.40; No. 13½, $5.45; No. 14, $5.55; No. 15, $5.75; No. 16, $6.

Stove Pipe Wire Up

Stove pipe wire is also increased: No. 18 is now $6.20 per 100 lbs.; and No. 19, $6.70 per 100 lbs.

Wire Screen Cloth Up

Black wire screen cloth is advanced again. In 100-ft. rolls it sells now at $3 per 100 square feet.

Cotton Rope and Twines Again Up

COTTON ROPE, ETC.—Renewed advances are noted in cotton rope and twine. It is stated that cotton goods of many kinds are now two and a half times increased in cost, and still increasing. Sash cord, No. 6, is now 46½c a lb.; No. 7 is 45½c a lb.; Nos. 8-12 are 45c a lb. Cotton wrapping twine, 3-ply is 42½c a lb.; 4-ply is 46c. Cotton rope, 3/16ths, is 40c a lb., and ¼ in. is 39c a lb. Cotton clothes line prices now are 30 ft., $1.50 doz.; 40 ft., $1.82 doz.; 48 ft., $2.20 doz.; 60 ft., $2.75 doz.; 72 ft., $3.15 per doz. Candlewick is increased again to 45c a lb.

No Small O-Cedar Made After Jan. 1

MOPS.—After January 1, 1917, no more of the small-sized lower-priced O-Cedar mops will be manufactured by the firm making these mops. There may still be supplies available in the jobbers' hands, and these will be sold while they last, but the end of the cheaper O-Cedar mop is in sight. Cost of materials and of, it is said, labor has made it prohibitively expensive for the firm to keep on with the small-sized line, on which rumor hath it there was a loss of late running to about a nickel a mop. The cans and the cotton, and the metal for the fittings are all away up. In future also the triangular mop will be sold at the same price as the round.

Steel Weigh Beams and Scales Advanced

WEIGH BEAMS.—Steel bar weigh beams are up in price, according to a new revised list just issued. The 100 lbs. size is listed at $6; the 150-lb. at $6.50; the 200-lb. at $6.75; the 250-lb. at $7; the 300-lb. size at $7.25; the 350-lb. size at $7.50; the 400-lb. size at $7.75; the 500-lb. at $8; and the 600-lb. size at $8.75. For all except the last named size the stamping charge is net extra 50c. The 600-lb. size stamping charge is net extra 75c. Standard Union No. 2, as "Champion Jewel," 240-lbs. scale, is listed at $10, with the usual net extra for stamping, and all the above prices are subject to a trade discount of 25 per cent. on the list price.

Revolvers, Skates, Bolts and Oil Up

MISCELLANEOUS.—Various important lines of shelf goods of a miscellaneous nature, and some other articles, have also advanced this week. Iver Johnson revolvers show an increase of over 10 per cent. Three-in-One oil is not yet increased, but will be after January 1, 1917. Starr skates are up 15 per cent. on all lines. Sink bolts are now 55 per cent. off, instead of 60 per cent. off. Barrel churns, the advance in which was noted last week in Toronto, are advanced in Montreal, discounts also being now 27½ off f.o.b. Ottawa, Kingston, Montreal, and 30 off Toronto, Hamilton, London, and St. Mary's. All factory prices have been withdrawn on force and lift pumps, hay tools, etc., but after January 1st quotations may be made for delivery April 1. Wheelbarrows also show increased prices, navvy steel wheel being now $41.25; garden steel wheel, $53; and light garden, $37.25.

Lead and Tin Show Advances in Price

INGOT METALS.—The market for the metals is firm as ever. Copper is unchanged at $39.50-$40 per 100 lbs. Lead is strong and scarce, advanced from last week, and now $11.25-$11.50 per 100 lbs. (Lead pipe is now $14 per 100 lbs. f.o.b Montreal for the ordinary, and $15 f.o.b. Montreal for composition grade. Lead traps and bands are increased to net list. Lead wool is up 1c a lb.). Tin shows an increase to $51 and $51.50 this week. Zinc (sheet) is firm at 25c and 25½c a pound. Spelter is up a little to $15 and $15.25 per 100 lbs. Solders are unchanged from last week, 31c per lb. for tinsmiths' and 29c for wiping solder.

Manila and Sisal Products Advance 2c

ROPE.—A sharp advance of 2c in all rope and sisal products has been put into effect during the week. The reason for the advance is a shortage in the fibre and an increase in freight rates from 1½c to 2c per pound. Pure Manila is now quoted at 25½c per pound basis, British Manila at 21c, New Zealand hemp 21c, sisal rope at 19c, single lath-yarn at 19c, and double lath-yarn at 19½c per pound. White polished halyard, yacht marline, deep sea hemp line, tarred ratline, tarred bolt rope, marline and houseline remain at former quotations. Jute rope has been advanced ½c on the basis, and is now quoted at 15½c to 16½c. Italian rope is quoted on a basis of 36c per pound.

TORONTO MARKETS

TORONTO, Dec. 15.—Wholesalers almost marvel at the way the trade continues in the face of high prices and shortages in many lines. "Wonderful" is the term one representative of a large wholesale house expressed the situation in speaking of the volume of business during the week. The past week has been one of spectacular changes. Wire nails and wire products registered one of the biggest advances ever recorded at one single jump. White lead in oil made a gain of 50c per hundred pounds and establishes a new high record. Many other lines have registered big advances. Skates are very scarce and the demand is big. There is also a famine condition in children's sleighs. Tubular rivets and bifurcated rivets have again

advanced from the manufacturer to the jobber. Certain makes of tools have advanced 10 per cent. on the complete line and builders hardware of Canadian make is all up 10 per cent. Cotton products are all higher in price. Rope has taken a rapid move forward to the extent of 2c per pound. The stove market is firm and advances in these lines would not come as a surprise.

Another Big Advance In Price of Wire Nails

NAILS.—Wire nails headed upward in no uncertain way during the week when an advance of 35c per hundred pounds was recorded. This constitutes a record for one single advance. They are now quoted at $4.70 base and even at the new high price there is a firmness in the market which seems to point toward even higher prices in the not distant future. Steel rods have advanced greatly in the United States within recent weeks and nails must perforce follow upward in sympathy. This price constitutes a new high record for nails. "Five Dollar Nails!" seem a strong probability, as some interests already looks upon this as the fitting slogan.

All Wire Goods Marked Up 30 Cents

WIRE.—In harmony with the advance in wire goods all wire products have had a big advance during the week, the increase amounting to 30c. The advance applies to cut hay baling wire, stovepipe wire, hay wire in coils, smooth steel wire and wire bale ties. The increased price has been caused in this instance by the firmer and higher price in steel bars, a big advance having recently taken place in these in the United States. Cut hay baling wire is now selling at $4.70 for Nos. 9 and 10, $4.95 for Nos. 12 and 13, $5.05 for No. 13½, $5.40 for No. 14 and $5.55 for No. 15, with the usual 7½ per cent. added to these prices.

Hay wire in coils is now selling at $4.90 for No. 13, $4.95 for No. 14, and $5.05 for No. 15. Smooth steel wire is quoted at $5 per 100 pounds for the base sizes No. 0 to 9, with the usual extras for smaller sizes. Wire bale ties are now $5.30 for No. 12, $5.40 for No. 13, $5.45 for No. 13½, $5.55 for No. 14, $5.75 for No. 15 and $6 for No. 16.

Staples and Galvanized Fence Hooks Are All Up

FENCE STAPLES.—Prices on wire fence staples both bright and galvanized have advanced during the week. Galvanized poultry netting staples have also registered an advance in a like amount. Fence hooks galvanized, are also among the commodities to register an advance in sympathy with the higher prices for all wire products. Bright fence staples in 100 pound kegs are now quoted at $4.85 and in 25-lb. boxes at $5.10 per 100 pounds. Galvanized fence staples are quoted at $5.70 in 100-lb. kegs and $5.95 in 25-lb. boxes. Galvanized fence hooks are selling at $5.10 in 100-lb. kegs. Galvanized poultry netting staples are quoted at $9.60 in 100-lb. kegs and $10.40 in 10-lb. boxes.

NEW PRICES ON WROUGHT PIPE.

Following are the new prices on wrought pipe as announced in a last-minute item in HARDWARE AND METAL last week. The advance over recent quotations amounts to 5 per cent. and is from $4 to $6 per ton.

Standard Buttweld.	Black.	Galvanized.
⅛ in.	$ 4 00	$ 5 50
¼ in.	3 42	5 55
⅜ in.	3 42	5 55
½ in.	4 42	5 99
¾ in.	5 41	7 53
1 in.	7 99	11 14
1¼ in.	10 81	15 07
1½ in.	12 93	18 01
2 in.	17 39	24 24
2½ in.	27 50	38 32
3 in.	35 96	50 11
3½ in.	45 08	62 10
4 in.	53 41	73 58

Standard Lapweld.	Black.	Galvanized.
2 in.	$ 20 35	$ 26 83
2½ in.	30 42	40 66
3 in.	39 78	53 17

7 in.	138 00	182 10
8L in.	145 00	191 30
8 in.	167 00	220 30
9 in.	200 10	263 90
10L in.	185 60	244 80
10 in.	239 00	315 20

All Bucksaws Have Been Marked Higher

BUCKSAWS. — The manufacturers have advanced the price of all bucksaws and in certain instances it amounts to considerable. One line, the Happy Medium, for instance is now selling at $6.25 per dozen. In some cases this line was quoted at $4.75 per dozen heretofore. The advance on all lines of bucksaws has been proportionately the same.

Galvanized Clothes Line Registers Advance

CLOTHES LINE. — Galvanized clothes line wire has recorded an advance during the week and in the 100-foot lengths seven strand, is now selling at $6.40 per 1,000 feet. In the 50-foot lengths the price is $6.60. No. 17 gauge in the 6-strand is quoted at $5.15 in 50-foot lengths and $4.95 in 100-foot lengths. No. 19 gauge in the 6-strand is quoted at $4.60 per 1,000 feet in 50-foot lengths and $4.35 per 1,000 feet in 100-foot lengths. This advance follows in line with the advance in other wire products.

Tubular Rivets and Bifurcated Again Up

RIVETS.—An advance from the manufacturers to the wholesalers has taken place in the price of tubular rivets and bifurcated rivets. The discount has been changed on these which amounts to approximately a 10 per cent. increase. These rivets are manufactured in the tinned, coppered and japanned ware. There is a firmness in all steel rivets and burrs and further advances in these products will not be improbable in the near futere.

Skates Up 10 Per Cent.; Famine in Boys' Sleighs

SKATES AND SLEIGHS.—An advance of 15 per cent. has taken place in all lines of skates during the week. There has been a big demand for them and there is a great scarcity. The Star Manufacturing Company are unable to supply any further orders. One Toronto agent for a certain brand who at this time of the year in normal years carried a stock of 10,000 pairs in their warehouse in this city now have only about 150 pairs of odd sizes that cannot be disposed of. Orders that were placed in the United States for skates were cut down to 50 to 60 per cent. and this has caused the shortage. In children's sleighs there is also a condition that borders on a famine. The demand has been large and the supplies small and when these conditions meet there is pretty sure to be a firm market.

All Yankee Tools Have Advanced 10%

TOOLS.—One of the well-known makes of tools has been marked up in price during the week in the Yankee line. This line is manufactured by North Bros. and is quite an extensive one, comprising such tools as screwdrivers, automatic drills and other lines. The advance amounts to 10 per cent. over present prices and includes all the

various lines manufactured. The advance in price is due in part to the firmness and high price in the steel market.

Canadian Builders' Hardware Up 10%

BUILDERS' HARDWARE. — The manufacturers of builders' hardware in Canada have again advanced the price on all their lines 10 per cent. This advance follows one of a similar amount made in recent weeks. There is a firmness in this market owing to the situation in the iron and steel market. The labor situation also enters as a factor in the higher prices.

Firmness in Leather Belting and Soles

LEATHER GOODS.—There is a firmness in the market for all leather products handled by the average hardware store, such as leather belting, leather lace, leather and tap soles and top lifts. Belting is still quoted at 30 and 10 per cent. off list for the extra quality and 30, 10 and 10 for the standard quality. Side lace leather is quoted at $1.20 per pound and cut lace leather at $1.40 per pound. Manufacturers are refusing to book orders for future delivery at present prices. With the scarcity in leather and the heavy demand there is considered good reason for still higher prices in the not distant future. Tap soles and top lifts are also firm and further advances would not come as a surprise, especially if nothing comes of the peace proposals.

Pigskin and Cowhide Mitts Are Withdrawn

MITTS AND GLOVES. — Certain manufacturers of pigskin and cheap split cowhide mitts have been forced to withdraw these lines from the market owing to their inability to get supplies of raw material. Another line of little better quality in the cheap split cowhide has been advanced 50c per dozen and are now selling at $11 per dozen. Buckskin gloves have advanced $3 per dozen and the grade that formerly sold for $24 is now quoted at $27. This material is becoming exceedingly difficult to obtain. Moccasins in the buckskin that were formerly $27 per dozen have been advanced to $33 per dozen, an increase of $6. Moccasins that formerly sold for $16.50 have been increased to $19.50 per dozen. There is a great scarcity of leather for gloves of all kinds. Horsehide teamsters' mitts are holding steady in price at $21 per dozen.

Asbestos Sheeting Again Goes Upward

ROOFING.—The market for asbestos sheeting is still in a firm and advancing condition. The lowest quotations given last week were $6 per 100 pounds, whereas during the past week the lowest quotation obtainable was $8. Some dealers were selling as high as $10. As stated in HARDWARE AND METAL last week there is a great scarcity of this material owing to the fact that the manufacturers in Quebec have discontinued making it. The market for all roofing materials is firm.

Manila and Sisal Products Advance 2c

ROPE.—A sharp advance of 2c in all rope and sisal products has been put into effect during the week. The reason for the advance is a shortage in the fibre and an increase in freight rates from 1½c to 2c per pound. Pure Manila is now quoted at 25½c per pound basis, British Manila at 21c, New Zealand hemp 21c, sisal rope at 19c, single lathyarn at 19c and double lathyarn at 19½c per pound. White polished halyard, yacht marline, deep sea hemp line, tarred ratline, tarred bolt rope, marline and houseline remain at former quotations. Jute rope has been advanced ½c on the basis and is now quoted at 15½c to 16½s. Italian rope is quoted on a basis of 36c per pound.

Plumbers' Oakum Steady: Other Oakums Advance

OAKUM.—There has been an advance of 1c per pound on certain grades of oakum and 1½c on others. Plumbers' spun oakum, however, has held steady in price and is still quoted at 8c per pound. The demand for the product has been fairly good. Following are the quotations on the various lines:

Plumbers' Spun oakum	$0.08
U.S. Navy (English)	0.15
U.S. Navy (American)	0.18½
U.S. Clipper	0.17
Best American	0.08

All Valves Have Again Advanced in Price

VALVES. — Considerable advances have again been recorded in almost all lines of valves. The increase is in the neighborhood of 10 per cent. The changes involve compression work, cushion work, Fuller work, basin cocks, bath cocks, flatway and roundway stop and waste cocks, steam cocks, globe, angle and check valves and radiator valves. The demand recently has been heaviest on steam work, manufactures reporting that they have been unable to take of the demand. The labor situation is affecting production as skilled workmen are at a premium. There is a firmness in the market and as long as the present condition of affairs exists there is every reason to expect a continuation of the present firm conditions. Following are the discounts on the various classes of work:

Ground work, 50%; compression work, standard, 55%; high grade, 48%; cushion work, 40%; fuller work, standard, 54%; high grade, 47%; basin cocks, No. 0, standard, 49%; high grade, 49%; Nos. 1 and 2, standard, 49%; high grade, 40%; bath cocks, 55%; flatway stop and waste cocks, standard, 53%; high grade, 50%; roundway stop and waste cocks, standard, 53%; high grade, 50%; steam cocks, 20%; Globe, angle and check valves, standard, 25%; high grade, 22½%; radiator valves, standard, 30%; high grade, 30%; patent quick opening valves, 60%.

Bathtubs and Sinks Higher $1.60 Each

BOILERS AND ENAMELWARE.—Advances of $1.60 in the price of enamelware bathtubs and sinks have gone into effect since last issue. The price of the 4 foot, 4½ foot and 5 foot is now $23.70 as compared with $20.10 at the time of last quotation. The 5½ foot size is now quoted at $27.30, which also represents a corresponding advance. In the roll-top sinks the new price for the 18 by 30-inch size is $12.10, as compared with the former price of $10.50. The market in enamelware is very firm and other advances are looked for. Jobbers live in the market only from day to day. They have no lists and a quotation given one hour may be superseded by new and higher lists, the following hour. Range boilers have held steady in price and are quoted at the same figures.

30-gallon range boilers, standard	$10.00
30-gal. range boilers, extra heavy	12.50
Bathtubs, roll-top, 4, 4½, 5 feet	
24 to 30 in. wide	23.70
5½ feet	27.30
Sinks, roll-top, 18 x 30 in.	12.10

Lead pipe		$0 14
Lead waste pipe		0 15
Traps and bends		Net list

Lead Sheets—		
3 lbs. sq. ft., per 100 lbs.		12 25
3½ lbs. sq. ft., per 100 lbs.		12 25
4 to 6 lbs. sq. ft., per 100 lbs		12 00

Cut to sizes, 75c extra per 100 lbs.

Discount on Files Is Again Revised

FILES.—Discounts on the Canadian makes of files have been changed from 60 and 2½ per cent. off list to 60 per cent. off list. As will be noted this provides for a substantial increase in the price. The brands affected are the Arcade, Eagle, Diston, Globe and Vulcan. The discount on Delta files has been changed from 47½ per cent. off list to 40 and 5 per cent. off list. Nicholson, Black Diamond and Great Western remain unchanged.

All Cotton Goods Again Register Advance

TWINE, ROPE, SASHCORD.—Although the cotton market has shown some weakness during recent days the prices of cotton products handled by the hardware trade have shown a firmness and advances have been recorded. Cotton rope has advanced in certain quarters from 1¼c. to 2½c. per pound. With some jobbers, however, the price has held steady, there being no advances recorded. The lower range of prices still holds. One-eighth inch is now quoted at 47½c. per pound; five-thirty-seconds at 44c.; three-sixteenths at 41¼c.; and ¼ inch and up 40c. Sashcord in No. 6 size is quoted at 46½c. per pound, No. 7 at 45½c. and Nos. 8 to 12, 45c.

Cotton clothes lines have also advanced and for the 40-foot lengths are selling at $1.75 per dozen, 48-foot lengths at $2.10 per dozen, 60-foot lengths at $2.65 and 100-foot lengths at $4.40. Cotton twine in the 3-ply is now quoted at a range of 36½c. to 45½c. per pound and in the 4-ply from 39c. to 49c. per pound. Five-ply and up is quoted at 39½c. and variegated at 43½c.

Prices of Stoves in Very Firm Market

STOVES.—There has been an exceptionally heavy demand for stoves of all kinds for the fall and winter trade. The recent cold snap has cleaned the manufacturers out of small heaters and there is now no surplus stock in their hands. There has also been a good demand for gas stoves of various kinds at this time of the year. There is a firmness in the market for stoves of all kinds owing to the inability of the manufacturers to get black sheets. An advance of 5 per cent. on stoves took place in September last and conditions are such that a further advance would not come as a surprise.

Pig-Iron Prices Still Withdrawn

Locally there has been little change from last week in ingot metals. Pig lead continues firm and the high prices in this metal have been reflected in prices of many lead products.

There is a good demand for copper, tin and lead.

Copper is quoted locally from 37½c. to 39c. Lead remains at 9¼c. Spelter ranges from 15c. to 15½c. Tin is quoted at 48c. Antimony is unchanged at 18c. and aluminum is 68c.

Quotations on domestic pig irons are still withdrawn and no information is yet available as to when new prices will be issued. That they will be advanced is a certainty, but how much it is difficult to say. It is understood that a Canadian foundry interest in Ontario recently purchased 27,000 tons of basic pig iron in Buffalo at $30 per ton, furnace, which is now a minimum for that grade of iron.

Black and Galvanized Pipe Go Higher

As predicted in HARDWARE AND METAL, for two weeks past black and galvanized iron pipe have advanced further. The market is very firm. New prices are shown in the current quotations.

Sand Paper, Files and Rasps Go Higher

Discounts on B. and A. sandpaper have been changed from 25 per cent. to 12½ per cent. off list. Diamond and Imperial sandpaper are now quoted at 20 per cent. off list. Globe files have advanced about 15 per cent., and are now quoted at 60 per cent. off. Heller's rasps have advanced 25 per cent., and are now quoted at 50 per cent. off list.

Wire hat and coat hooks have advanced 5c gross, and are now quoted at 80c per gross.

Curry combs have advanced, and are quoted at net list instead of 12½ per cent. off as formerly.

Crow bars, hitching weights, splitting wedges and saw wedges have advanced about 25 per cent. Prices are now as follows:—Crow bars, 6c lb.; hitching weights, 6c lb.; common splitting wedges, 7c lb.; truckle pattern, 7½c lb.; saw wedges, 12c lb.

The 240-lb. Champion scale has been advanced 75c and the new net price, stamping included, is $8.

LONDON MARKETS

LONDON

LONDON, Ont., Dec. 14.—Another heavy list of price changes has gone into effect, and the end is not yet in sight. Among the many lines which have advanced during the week are rope, nails, wire, white lead in oil, putty, black and galvanized iron pipe, fence staples, etc.

Wire Nails and Staples, Etc., Up 30c-35c

Wire nails have advanced another 35c per 100 lbs., and the price locally is now $4.70 base. Price for Windsor and Walkerville is $4.77½ f.o.b. factory points, car load freight allowed.

Fence Staples Up 30c

Fence staples are up 30c per 100 lbs., and galvanized are now quoted at $5.70 per 100 lbs.; bright are quoted at $4.85 per 100 lbs., with the usual advance in both cases of 25c per 100 lbs. for 25-lb. boxes.

Galvanized fence hooks are up 30c per 100 lbs., and kegs are now quoted at $5.70 per 100 lbs.; 25-lb. boxes are quoted at $5.95 per 100 lbs.

O. and A. Wire Up

O. and A. wire has also advanced 30c per 100 lbs., and net prices are now as follows:—No. 10, $5.16; No. 11, $5.22; No. 12, $5.30; No. 14 hay baling wire, $5.40.

Stove Pipe Wire Up 30c

Stove pipe wire has advanced 30c per 100 lbs. to the following prices:—No. 18, $6.20 per 100 lbs.; No. 19, $6.70 per 100 lbs.; small lots, 7½c lb.

Galvanized Fence Wire Up

Higher prices have become effective on galvanized fence wire, and prices are now as follows:—Barb, $4.50; No. 9, Plain galvanized, $4.25; No. 12, $4.40; No. 13, $4.50; No. 9 coil spring, $4.30.

Cotton Goods Are All Priced Higher

Sash cord has advanced 2c per pound, and the new prices are:—No. 6, 46½c lb.; No. 7, 45½c lb.; Nos. 8-12, 45c lb.

Twine is Higher

Cotton twine has advanced, and is now quoted as follows:—Three-ply, 45c lb.; 4-ply, 48c lb. Cotton rope is now quoted at 41c for 3-16 in., and 39½c for ¼ in. and larger.

Awning Cord, Seine Twine, Etc., Higher

Braided awning cord has advanced, and the new prices follow:—No. 3, $1.35 doz.; No. 3½, $1.50 doz.; No. 4, $2.40 doz.; No. 4½, $3.35 doz. Candlewick is quoted at 45c lb.

Seine twine has advanced to the following prices:—No. 18 and larger, 1-lb. cones, 52c lb.; No. 18 and larger, ¼-lb. cones, 53c lb.; No. 15 and smaller, 1-lb. cones, 53c lb.; No. 15 and smaller, ¼-lb. cones, 54c lb. Cotton bag twine is now quoted at 55c lb.

Wheelbarrows Up 10 Per Cent.

Wheelbarrows have advanced 10 per cent., and light pattern garden are quoted at $2.75; heavy garden, $3.75; heavy farm, $3.75 each.

Cross-cut Saws Higher

Maple Leaf lance saws, Racer, Premier and Pangburn are now quoted at 25 per cent. off. Philadelphia lance and improved Champion are quoted at 35c foot, instead of 30c as formerly.

Brackets and Hangers Up

Rafter brackets have advanced to 75c dozen; rafter hangers, 10 in., are now 75c doz., and 12 in. are 85c doz.

Alarm Tills Up

Tucker alarm tills have advanced to $3 each.

Lead Traps Advance

Lead traps have advanced 10 per cent., and are now quoted at net list.

Screen Cloth Up

Painted wire screen cloth has advanced 10 per cent., and the price is now $2.75 per 100 sq. ft. in 100-ft. rolls, and $2.80 per 100 sq. ft. in 50-ft. rolls

Lumbermen's Tools and Cobbler Sets Up

Lumbermen's tools, including skidding tongs, swamp hooks, cant hooks, and pike poles, etc, have advanced 20 per cent. Cobbler sets are up about 15 per cent., and are quoted as follows:—Economy, $6 doz.; Home No. 2, $11.40 doz.; Home No. 1, $15.60 doz. Blacksmiths' vises have advanced 20 per cent.

Pumps Advance

Pumps have again advanced, and the general discount on pumps with iron cylinders is 35 per cent. Other discounts are as follows:—Pumps with brass cylinders, 30 per cent.; brass-lined cylinders, 30 per cent.; brass body cylinders, 25 per cent.

White Lead in Oil and Putty Advance

As predicted by HARDWARE AND METAL for some time past, white lead in oil has advanced, and prices are now 50c per 100 lbs. higher than last week. The price locally in ton lots is $14.45 and $14.75 in less than ton lots.

Putty has advanced 20c per 100 lbs. standard and 30c per 100 lbs. on pure. Prices are now:—Standard 100-lb. drums, $3.20; 25-lb. drums, $3.30 per 100 lbs.; pure, 100-lb. drums, $4 per 100 lbs.; 25 lbs., $4.10 per 100 lbs.

Linseed Oil Down 5c

Following the decline in flax, linseed oil has dropped 5c per gallon, and is now quoted as follows:—

	Raw.	Boiled.
1-2 barrels	$1.15	$1.18
3-5 barrels	1.14	1.17
6-9 barrels	1.13	1.16

Turpentine Up 2c

Following continued firmness in the primary market:—Turpentine has advanced 2c per gallon, and is now quoted in single barrels at 81c gal.; 2-4-barrel lots, 78c Imp. gal.; 5-gal. lots, 86c gal.

Manila and Sisal Products Advance 2c

ROPE.—A sharp advance of 2c in all rope and sisal products has been put into effect during the week. The reason for the advance is a shortage in the fibre and an increase in freight rates from 1½c to 2c per pound. Pure Manila is now quoted at 25½c per pound basis; British Manila at 21c; New Zealand hemp, 21c; sisal rope at 19c; single lath-yarn at 19c; and double lath-yarn at 19½c per pound. White polished halyard, yacht marline, deep sea hemp line, tarred ratline, tarred bolt rope, marline and houseline remain at former quotations. Jute rope has been advanced ½c on the basis, and is now quoted at 15½c to 16½c. Italian rope is quoted on a basis of 36c per pound.

Lawn Mowers Advanced.

Taylor-Forbes lawn mowers have advanced about 12½% and are quoted at 50% off list prices now in effect.

WINNIPEG MARKETS

WINNIPEG, Dec. 14.—With Xmas day looming nearer, the general trade throughout the hardware jobbers warehouses has slackened away somewhat, although considering the time of year, business might almost be termed brisk. Some retailers are taking advantage of to-day's quotations on various lines and buying their stock for next year now, and in view of the information available from the various manufacturing centres, this course is justifiable.

The present week with its quieter tone in all markets will come somewhat as a relief to every one. However, it can be seen that prices are still inclining, and the news, just available, of further increases in the prices of enamelware, tinware, etc., will not be particularly welcome. The latest discounts are not yet available, but we understand that pieced tinware will now be sold at 25% above list. This is a big increase over former prices and follows advances made only three or four weeks ago.

Many Prices Go To Higher Levels

Black iron sheets have undergone a revision in price during the past week and new quotations shown below range from 15c. to 90c. advance per 100 lbs. over preceding figures. The advances noted herewith and during the past week or two on galvanized sheets would hardly seem warranted if close touch were not kept on the metal markets in the States. Advices from that source indicate that a very heavy demand exists for galvanized sheets and buyers are willing to pay almost any price for delivery of their orders. If quotations for Winnipeg were figured out on the basis of prices being paid in Pittsburg, a general advance of about $2 per 100 lbs might be expected.

The latest prices issued on black iron sheets are as follows:—

Per 100 lbs.—28 ga., $6.10; 26, $6; 22 and 24, $5.95; 18 and 20, $5.90; 16, $5.75; 14, $5.65; 12, $5.75; 10, $5.70.

No further change has been made in the prices on galvanized sheets, the following quotations being best available for Premier, Apollo, or Fleur de Lis:—

Per 100 lbs.—10¾ ga., $7.75; 28, $7.40; 26, $7.15; 24 and 22, $6.95; 20 and 18, $6.75.

Higher Prices on Lace and Other Leathers

The continued advance in all lines of leather goods reveals at least one interesting feature. Shoemakers are claiming that rubber heels can now be attached as cheaply as leather, and if this is the case there will undoubtedly be a decided increase in the sale of rubber heels.

One of the most important lines handled by the retail hardware merchant is lace leather and new prices issued to-day reveal an upward tendency. Quotations are now being made on the following basis:

Oak tanned, sides, $1.30 per lb., laces, $1.45 per lb.; raw hides, sides, $1.25 per lb.; laces, $1.40 per lb.

Log Chains, Paints and Varnishes Higher

Log chains are being quoted at higher prices than formerly, the new figures being as follows:—

Per 100 lbs.—5-16, $8; ⅜, $7; 7-16, $6.85; ½, $6.75.

Following the announcement made in HARDWARE AND METAL Eastern paint reports of further advances in the prices on mixed paints and varnishes comes the news to Western readers of this advance going into effect here. Quotations are being figured out on the new basis and prices will undoubtedly be available for next week's report.

There has been no further change in the price on linseed oil and turpentine. The market on flax is very uncertain and has been undergoing considerable variation during the past few days, but no revision has been made on linseed oil as yet, prices being as follows:—

Per gal., bbl. lots, raw, $1.40; boiled, $1.43.

Turpentine, 85c. per gal., bbl. lots; 88c. per gal., ½ bbl. lots; 90c. per gal., 5 gal. and 1 gal. lots.

Many Miscellaneous Lines Advance

Other lines which have advanced during the week are:—

Lamp burners, per doz.—Banner A, 90c.; B, $1.25; Security, A, $1.20; B, $1.50; Regal, D, $2.75. Lantern burners, 1, 90c.,; 2, $1.50.

Cotton clothes lines, per doz.—48 ft., $2.10; 60 ft., $2.60. Sisal clothes lines, 48 ft., $1.15; 60 ft., $1.45; 72 ft., $1.65.

Jobbers advise that a change in the terms applying to some lines of heavy goods has been made necessary on account of the enormous increases in the cost and a relative reduction in their profit.

In future tin plates, Canada plate, galvanized sheets, solder, bright and annealed wire will all be sold net, 30 days.

EVENTS IN THE TRADE

New Firms

Richlea, Sask.—Ambrose Vien, hardware merchant, is commencing business.

Moss Bank, Sask.—Brink & Agar Hardware Company are commencing business.

Personal

E. K. Spinney of Yarmouth, N.S., paid a visit to Montreal on business the other week.

C. A. Parent of the Canada Yale and Towne Co., was in Montreal this week on business.

John Monahan of Monahan Bros., St. Lin, Que., was in Montreal on a business visit this week.

H. S. Southworth has left Steel & Radiation Co., Toronto, to take up the position of sales manager for "Stellite" as manufactured by the Deloro Mining & Reduction Co., Toronto.

Business Changes

Laura, Sask.—J. C. Garden, hardware and harness merchant, has sold out.

Kinistino, Sask.—E. H. Devlin (Est. of), hardware stock, sold to Millard Bros.

Jarrow, Alta.—J. W. Wyatt has sold his hardware stock and general store business.

Odessa, Sask.—Wagman & Hoffart, hardware merchants, have sold out to Fitch & Schroeder.

St. Jean Baptiste, Man.—Edward Comeault, hardware merchant, has commenced business.

Buffalo Head, Sask.—W. H. Austin hardware and grocer merchant is commencing business.

Oxbow, Sask.—Crossley & Johnston, hardware merchants, have sold their business to R. Gillespie.

Imperial, Sask.—Bradshaw & Anderson, hardware and implement merchants, have dissolved partnership.

Indian Head, Sask.—H. B. May, son of W. A. May, hardware merchant, Creemore, Ont., has taken over the business of the Indian Head Hardware Co.

London, Ont.—The Love Hardware Co. has been succeeded by the Chown Hardware Co., under the management of W. W. Chown, formerly of Edmonton, Alta.

Wm. J. Wilson New President

At a recent meeting of the Sales Managers Association of Canada, William J. Wilson, sales manager of The Winnipeg Ceiling and Roofing Co. was elected president of the Association for the year 1917 in succession to C. H. S. Bamfoard, sales manager of the J. H. Ashdown Hardware Co., Winnipeg, who filled the office during 1916. A well known hardware manufacturer was appointed second vice-president in the person of William M. Crawford, sales manager of Sheet Metal Products, Winnipeg.

WILLIAM J. WILSON,
Elected President of the Sales' Managers' Association of Canada.

WILLIAM M. CRAWFORD,
Elected Second Vice-president of the Sales' Managers Association of Canada.

A joint annual get-together banquet of the Can. Credit Men's Association, the Commercial Travellers Association, and the Sales Managers Association will be held in the Royal Alexandra Hotel, Winnipeg, on December 28, at which the chief speaker will be Sir James Aikens, Lieut.-Governor of Manitoba, and his subject "The People and the Land." There will be first class talent, and a number of good speakers. Arrangements are being made for an attendance of 700.

Industrial Notes

Owen Sound, Ont.—The Canadian Malleable Iron Co. are building an extension to their plant.

Hamilton, Ont.—The Canadian Shovel & Tool Co. are building an extension to their plant.

British Chemical Co., Ltd., capitalized at $50,000; head office, Montreal; to manufacture and deal in explosives, chemicals, acids, etc.

Oakville, Ont.—The Acme Rubber Co. propose establishing a factory here to make motor tires and belting. It is proposed to lease the Ware Building at first, and build a factory later.

Sarnia, Ont.—It is understood here that the Mueller Mfg. Co. propose making considerable extensions to their factory to take care of the increase in demand for their brass products.

Regina, Sask.—G. E. Carpenter, Winnipeg, secretary of the Canadian Manufacturers' Association, reports that a Regina section has been inaugurated, with J. P. Cook, of the North-West Iron Works, as chairman.

Hamilton, Can.—Tallman Brass & Metal Co. are making additions to their offices and plant, which will give them from fifteen to twenty thousand additional square feet of space for manufacturing purposes.

Campbellford, Ont. — The Dickson Bridge Works Co.'s plant which is engaged in the manufacture of six inch shells was totally destroyed by fire last Sunday night. The loss is estimated at $60,000, mostly covered by insurance.

Webb, Alta.—Henderson Bros., hardware merchants, have resumed business.

Montreal, Que. — The International Manufacturing Co., which was recently incorporated at Ottawa with a capital of $1,000,000, is a subsidiary of the International Fuse & Arms Co., of New York. A munitions plant will be erected in Montreal by Anglins, Ltd., of this city.

Welland, Ont.—The Canadian Steel Foundries, Ltd., here, have let a contract to Ryan & Gardner to build two open hearth furnaces and an extension 100 feet long to their machine shop. One new open-hearth furnace has lately been completed and with the above will double the capacity of the plant. The total extension will cost about half a million dollars.

Cowan Hardware Co., Wholesale and Retail, London, Ont.

"As a Canadian, I am proud that such a magazine as HARDWARE AND METAL can be produced in our country, and I feel that every hardware man in Canada should read it from cover to cover. We find that we cannot get along without the weekly HARDWARE AND METAL, now that the prices of all hardware commodities change so rapidly. Our copy is in constant use.

"Yours truly.
"Cowan Hardware Co.
"T. A. Jones,
Manager."

HARDWARE LETTER BOX

Steel Tubing

J. L. Demers, Thetford Mines, Que.—Please give names of firms manufacturing seamless steel tubing.

Elyria Iron & Steel Co., Elyria, Ohio; Edward N. Cook Plate Co., Providence, R.I.; Spang, Chalfant & Co., Pittsburg, Pa.; Standard Welding Co., Cleveland, Ohio; Phenix Tube Co., Brooklyn, N.Y. —Ed.

* * *

Shear Sharpeners

C. B. Spear, Sussex, N.B.—Please advise where I can get a machine for sharpening shears, etc.

Jones Bros. & Co., 31 Adelaide St. W., Toronto.—Ed.

* * *

Pine Lumber for Patterns

Bruce Stewart & Co., Ltd., Charlottetown, P.E.I.—Please advise where we can secure pine lumber for foundry patterns.

The James Shearer Lumber Co., Ltd., 225 St. Patrick street, Montreal, Que.—Ed.

CATALOGUES AND BOOKLETS

A practical attempt is being made by the Winnipeg Ceiling & Roofing Co., Winnipeg, Man., manufacturers of sheet metal goods, to assist the dealer in fighting the mail order houses by means of a small catalogue, containing the manufacturer's leading lines, and the ones most likely to be of interest to the farmer.

The first page is reserved for a message from the dealer to his customers, space being left at the foot for the dealer's name. The message is a friendly one, and concludes as follows: "Remember that we do not ask you for any money until you have seen the goods, had an opportunity of examining for yourself, and being assured that the value is there. When you want a pound of nails or a repair, we are glad to have you come to see us. When you want something bigger, just drop in and talk it over."

It will be observed that there is nothing in this talk to indicate that the catalogue has come from the manufacturer; and this is one of its most noteworthy features. Care has been taken to start the catalogue out with lines that will interest the farmer immediately, and from these leading on to other lines.

One of the main objects of the Winnipeg Ceiling and Roofing Co. in putting out this book is to assist the retailer, who meets with all sorts of difficulties when he starts out to print a catalogue in some of the Western towns. Dealers who are interested in fighting the mail order houses with their chief weapon, the catalogue, can secure copies on request.

Christmas Window Contest

FOR *many years past it has been customary for* HARDWARE AND METAL *to conduct a Christmas window display contest each year. The contest has become an event of wide interest for all Canadian retail hardwaremen interested in window trimming, and each succeeding competiton has been keener and each year has seen a wider and more representative response culminating in the big success of last year.*

In accordance with past custom, two contests will be conducted this year—one for stores in places under 5,000 population, the other for places of 5,000 and over. No restrictions will be set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade. Description should accompany each display.

Eight prizes will be offered as follows:—

PLACES OF 5,000 AND OVER		PLACES UNDER 5,000	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town window trimmer as to those in the larger towns and cities.

The contest closes on Monday, Jan. 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, *143-153 University Avenue, Toronto," and marked "For Christmas window contest."*

ARE YOU GOING TO ENTER?

WHAT OTHER PAPERS SAY

COMMANDEERING OIL STOVES

From *The Ironmonger,* England.

There would appear to be a serious shortage of sheet-metal oil stoves for warming purposes, and the requirements for the hospitals in France are so considerable that the War Office is taking the extreme step of commandeering all that can be found in the ironmongers' shops and stores of London, and it may be an even wider area. At certain shops in North London an officer appeared this week, accompanied by another gentleman, who seemed to be an expert buyer, and made inquiries as to the number of stoves in stock. After examination all suitable stoves were ordered, and instructions left that they would be collected later. Apparently the prices paid were the actual cost to the retailer, plus a percentage for working expenses. In one instance a suggestion that the price paid should be the current cost, plus the same percentage, was overruled, and the actual figure paid some months ago had to be accepted. In the matter of working expenses an offer of 10 per cent. was first made, but the ironmonger demurred, and in the end the authorities allowed him 12½ per cent.

HAZARDOUS BUSINESS

From *Merchants Record and Show Window.*

Holiday business comes very easy, in fact, so easy that occasionally a merchant comes to the conclusion that he can raise his prices on the various articles and still get the same amount of trade that would have been his at the original price. Here is a chance for added profit. But this is hazardous business and one that is very likely to react against the store.

The fact that people buy readily during the Christmas season is no proof that they buy blindly. Most people are pretty wise buyers and many of them may be classed as expert buyers, and the raising of prices on staple goods during the holiday season may not always deceive.

The holiday buying season is the big one for the business man, and it is during this particular season that hundreds of people visit a store for the first time. Supposing a number of them recognized the extra price on staple goods. Is it not readily seen that so many prospective customers have been lost? Then, the old customers are likely to be just as wise. Poor business—and dangerous.

SENTIMENT NO FACTOR IN POST-WAR TRADE

From *Canadian Machinery and Manufacturing News.*

To buy in the best and cheapest markets, and to sell to the best advantage in the same or other markets are sound business principles. Expediency and disability have, however, to be reckoned with, and, relative to our Dominion, the necessary upbuilding of a sound industrial fabric on the one hand, the lack of a merchant marine and in some considerable degree the lack of knowledge of outside requirements and possibilities on the other, militate against practical exposition of such a propaganda either whole or in part. During the past two years, numerous happenings in the prosecution of the war have made stirring appeals to sentiment, with the result that not a few hastily conceived schemes have been publicly suggested and launched concerning future trade relations with our meantime enemies. In a word, the commercial enterprise of the latter was to be circumscribed and restricted, if not altogether eliminated as a world factor. That such an undertaking was too stupendous,—a sheer impossibility fits better, perhaps, because impracticable—has come to be realized, however.

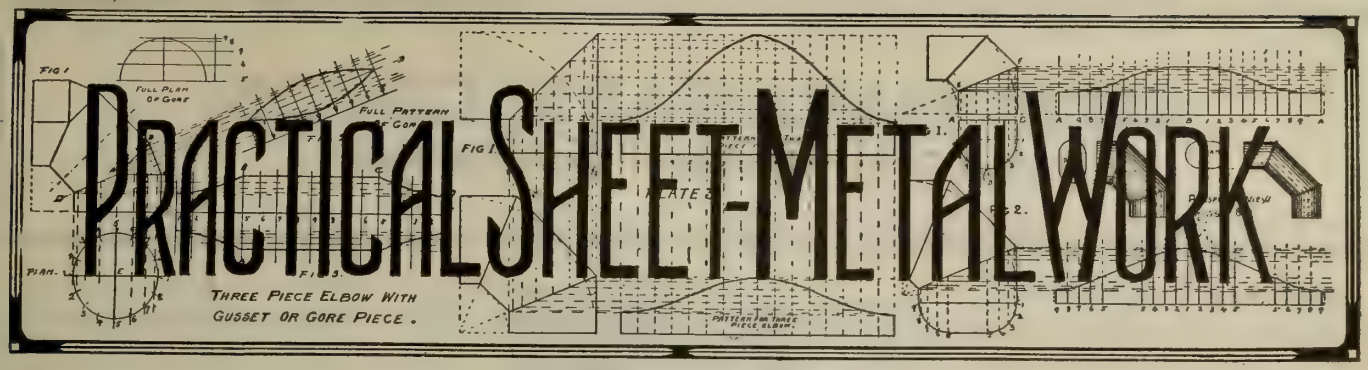
Is a trade war, following that of blood and destruction, inevitable? In some quarters such a contingency is not anticipated, being even flouted. Why, may we ask, shouldn't a trade war be the logical outcome of the other? The world owes neither of the meantime fighting nor neutral nations, in their individuality as such, a living, nor, in the enlarged sense a progressive development. They each owe it to themselves and to the world to shoulder the relative responsibility, and, as in the past, considerable effort will be expended in demonstrating the fact that such is their attitude. War as practised on the battlefields of Europe and on the sea may be hell, yet only does it differ from trade war in absence of harrowing episode and detail, although even these may be evidenced in lesser or greater degree.

Germany, we may rest assured, is going to have and take a place in the Sun following the war of blood, and her intensity of application to the furtherance of her object is likely to be less dependent on peace term detail than we are prone to imagine. Whether the war has had the like revivifying, yes and revolutionizing effect on her industrial and commercial enterprise as it has had in these directions on the other nations—warring and neutral, we are not in a position to say; this much may, however, be said, that preceding the war, Germany was in many respects an easy leader. We are inclined to think that her pre-war advantage is at least eliminated, and that little evidence of any individual nation monopoly meantime exists.

SHEFFIELD AND THE GLASS INDUSTRY

From *The Ironmonger,* England.

As the outcome of the establishment of a department for glass technology at the University of Sheffield a Society of Glass Technology has now been formed, with headquarters in that city. The new society has the support of the glass manufacturers in all parts of the country, and is, therefore, a national organization. Its objects are to bring glass manufacturers into closer touch with one another, and manufacturers, in turn, with men of science; to encourage original investigation in subjects connected with glass manufacture, and to serve as the medium by which scientific and technical information on glass collected from all known sources can be distributed by a system of abstracts published quarterly and by the formation of a library of works of reference available for members. Mr. Frank Wood is chairman of the society, and Dr. W. E. S. Turner, of the Sheffield University, is the secretary.



Serious inconvenience was caused to many British trades when the outbreak of war cut off the bulk of our supplies of foreign glass and the country realized how largely we had been dependent for this commodity upon makers abroad. Since then great efforts have been put forth to develop this important trade at home, and these endeavors have received valuable scientific assistance from Sheffield University. The haphazard methods which have prevailed in many of the British works will be replaced by modern organization and the utilization of knowledge gained by scientific research. Representative makers are now satisfied that their ancient trade has entered upon a new era of progress, and that, as the result, the country will shortly be in a position to supply its own needs in glassware to an extent immensely greater than before the war. The formation of the new Society makes Sheffield the leading centre of the practical application of science to the glass industry in Great Britain.

ENGLISH MANUFACTURERS' DIFFICULTIES

From *The Ironmonger.*

Many manufacturers who are not lacking in patriotism view with alarm the growing stringency of the regulations relating to the manufacture and distribution of metals and other materials used for war purposes. They realize that nothing matters so much as winning the war, but they feel that through the working of the regulations the manufacturing community is sometimes called upon to make sacrifices that are not really necessary, and, so far from hastening the end of the war, are likely to retard it. They say that many of them who are not engaged on war work because their plant is not adapted for it are grievously hampered by the regulations in doing useful work in maintaining our foreign trade. They point also to firms which are only intermittently engaged on war work, and which might employ their workpeople in the intervals making normal articles of commerce. Both classes are affected by the difficulty of getting metal and materials, and the requirements of both could be met, it is contended, without diminishing the output of munitions by an ounce. We were told recently of a galvanized hollowware manufacturer who in the lull between Government orders turned his attention to buckets and made a large number, all but the bails. Then he could get no further, because the iron manufacturers who held his order for the bails could not supply them except upon a class A certificate, which, of course, could not be procured. The iron, it was stated, was specially roiled for the purpose, and was known to be in stock at the time. In another case a contract for South America was hung up for lack of a very small quantity of metal tube of special dimensions, which, again, could not be got without a class A certificate. There are, in short, in the manufacturing centres a great many articles that are practically completed, but which cannot be finished and turned into money for lack of some trivial part.

Another aspect of the matter was brought to our notice recently by a nail manufacturer, who is under instructions to supply nothing except on a class A certificate. His customers now have to order their nails just as they require them. They cannot, of course, order for stock. As a result his daily post bag contains few large orders, but many small ones, for seven pounds of this, half a hundredweight of that, and fourteen pounds of the other, each with its separate certificate, and this in war time, when packers and clerks are at the front. What is needed, apparently, is the appointment of some competent authority in each manufacturing centre to consider instances of the kind referred to on their merits, and, where the restrictions can be relaxed temporarily without detriment to the output of war material, to advise the Ministry of Munitions to adopt that source. The appointment of such an authority would tend to dispel the fear which is rapidly growing that economic considerations are being lost sight of.

BY THOMAS STANFIELD

IN this issue we will take up the development of a round or cylindrical vessel. Before taking up the working out of its parts, it might be best to first take up a few points with regard to the method of figuring out the area and circumference of same.

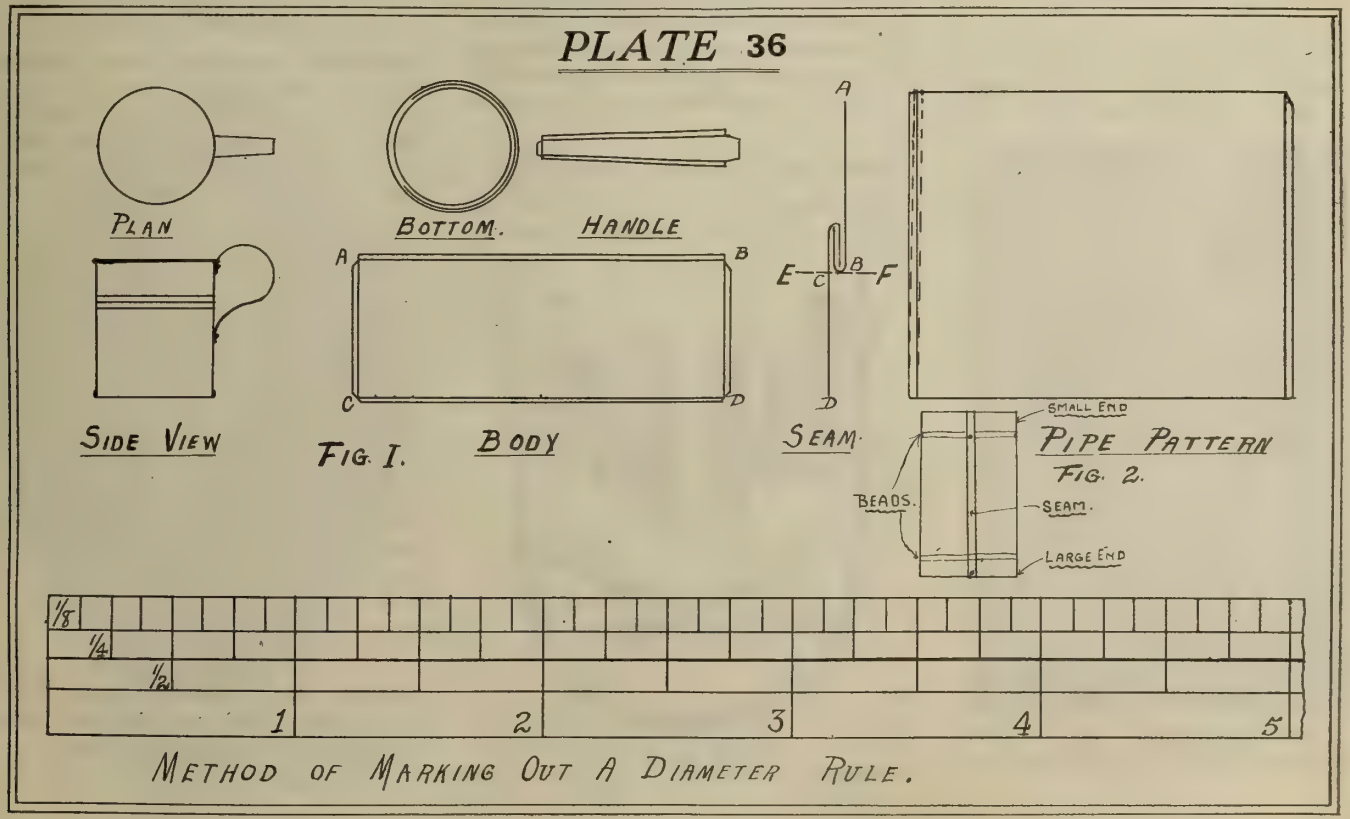
To find the area of a circle multiply the square of the diameter by .7854.

Take for example a circle of 10 inches diameter. The square of 10 is 10 multiplied by 10, equals 100; .7854 multiplied by 100 equals 78.54, the area of a 10-inch circle.

To find the circumference of a circle multiply the diameter by 3.1416.

For example, take a circle 7 inches in diameter. Multiply 3.1416 by 7, which equals 21.9942 inches.

In common practice the decimal .1416 is not made use of, the faction one-seventh taking its place, thus.



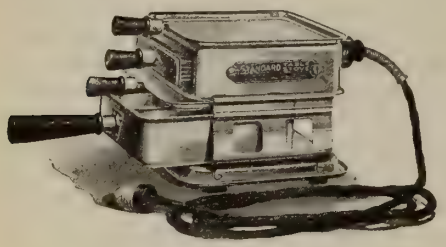
Multiply 7 inches by 3 1-7, which equals 22 inches; thus result compared to the one obtained by using the decimal shows a difference of less than one one-hundredth of one inch.

In dealing with the method of obtaining the circumference, we show an easily made rule. For this purpose it is convenient, and when made of sheet metal can be bent around most any curve, thus saving the necessity of using dividers or compasses. Its construction is simple. Take a two-inch strip of metal, half hard or springy brass preferred, and mark out as near as possible to 3 1/7 inches as many times as the length of rule is to be. Mark these spaces 1-2-3, etc., as shown, to show the circumference for 1-2 and 3, etc., inches diameter. Divide each space into halves, quarters and eighths and mark off as shown.

In Fig. 1 we show the plan and side views of a round tin dipper. With height and diameter given or drawn, first mark out and form up the body of the dipper. To mark out mark off a strip in width equal to height of article, as A-B, and C-D.

At one end, as at A-C, draw a line at right angles to A-B or C-D from A-C mark off, either by spacing with compasses, or by using a rule, the circumference of the article. If the spacing method is used, do not make the spaces too big, as by so doing a small amount of the girth is lost. If done by multiplying the diameter by 3 1-7, it works out pretty near exact, and if a diameter rule is used there is very little chance for a mistake being made. Having marked out the body, next allow the edge required for wiring at top and single edge for double seaming on bottom. The seam allowance is usually placed on each end, thus if a one-quarter inch edge is used, allow three-eighths of an inch on each end. The reason for this is shown at the drawing of a seam, the joint shown is cut at the lock by the line H-E-F, the line A-B above that line and C-D below. Make up the complete line A to D, leaving the three edges over, which

(Continued on page 50.)



NEW HARDWARE GOODS

OFFERED TO CANADIAN HARDWAREMEN

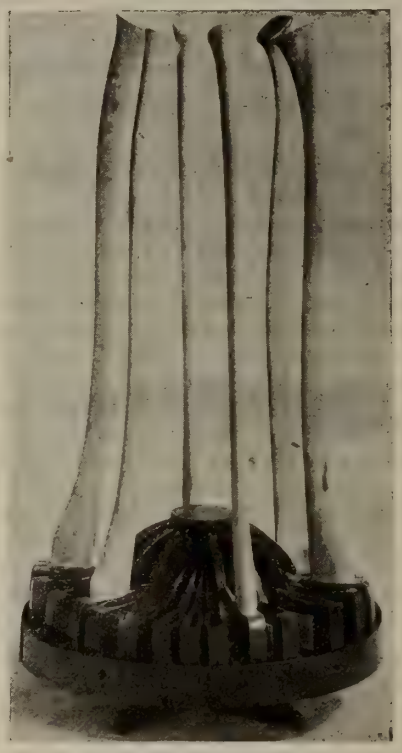
STANDARD TABLE STOVE

The increasing popularity of electric cooking appliances has led the Standard Stamping Company, of Marysville, Ohio, to place on the market the Standard Table Stove, for which they claim several important advantages.

The heating element used in the Standard Table Stove is made in two sections, one above the other, with an inch and a half space between them. In the space between the two sections of the heating element, a wire toaster drawer is located, so that both sides of the bread are exposed to the heat and are toasted at the same time. According to the manufacturers, this arrangement of the heating element not only permits of the toasting of both sides of the bread at the same time but also allows two additional cooking operations above and

Standard Table Stove.

below the two outer surfaces of the heating element. Toasting, it is said, does not in any way interfere with other cooking operations. For instance, eggs may be fried in one of the griddles on top of the stove, bread toasted in the toaster drawer and bacon or chops broiled in the deep vessel below; all at the same time and at the same expense for current.



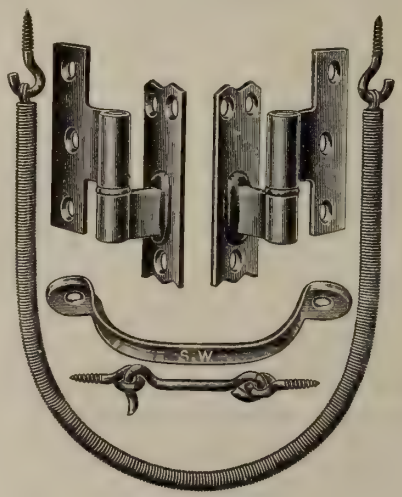
An egg poaching attachment with four egg cups for use in the deep vessel, is included in the regular equipment and provides a most delectable means for preparing eggs.

The stove is equipped with an attachment plug, which operates by a tilting motion instead of a straight push-in or pull-out.

The manufacturer claims that the Standard Table Stove will broil, boil, fry, poach, steam, toast, and, in short, do anything but bake.

STAR AXE RACK

P. Poitevin, Cornwall, Ont., is manufacturing the "Star Axe Rack," here



Star Axe Rack.

illustrated. The rack holds 30 axes, 6 handled and 24 unhandled. It requires 20 in. diameter counter space. The maker states that the rack revolves smoothly, and is nicely finished in green and black.

STANLEY SCREEN DOOR SETS

The Stanley Works, of New Britain, Conn., is now manufacturing a complete

Screen Door Set

set of hardware for use on screen doors hung outside of the casing, or doors that are wider than the entrance for which they are intended. With these 7/8-inch offset hinges, any screen door can be used as satisfactorily as though it accurately fitted into the frame. Doors are easily lifted off of these loose joint hinges.

This set is made of wrought steel, japanned. Packed with flat head screws, one set in a strong neat box.

This No. 1754 set consists of one pair of offset hinges, one only spring, one only handle or pull, one only 2½-inch gate hook and eye, and all necessary hooks and screws.

EXPORTS OF PIG IRON FROM INDIA

Pig iron exports from India for the fiscal year ended March 31, 1915, were 52,055 tons, against 82,592 tons and 92,614 tons for the same periods in 1914 and 1913. Imports of pig iron were 5,457 tons for the same fiscal year 1915, as compared with 12,254 tons and 11,545 tons in the corresponding periods of 1914 and 1913.

A SAFETY CODE

Realizing that lack of care is responsible for many easily preventable accidents, the Abrasive Wheel Manufacturers recently appointed a committee to draft a safety code to govern the use of abrasive wheels. This code is to be used as the foundation for uniform State laws and insurance rules in an effort to reduce the number of accidents and to eliminate much of the confusion now caused by conflicting laws and regulations. The Star Corundum Wheel Co., Detroit, has issued a bulletin containing the complete safety code drafted by the committee. Protection flanges, hoods and chucks are strongly advocated. About half the booklet is given over to a list of general safety requirements. The causes of grinding wheel accidents are tabulated, showing that practically all failures are caused by ignorance or careless mounting.

London, Ont.—The death occurred here of Wm. Gray, M.P., who for many years was identified with the oil industry.

WEEKLY PAINT DEPARTMENT

McArthur, Irwin Purchase Color Co.

The Allan Munro Color Co. Will Be Operated By McArthur, Irwin, Limited — Allan Munro Joins McArthur Irwin Organization

ANOTHER announcement of wide interest to the Canadian paint trade is made this week to the effect that McArthur, Irwin, Limited, Montreal, has purchased the Allan Monro Color Co., of Montreal, manufacturers of Chemical colors.

McArthur, Irwin, Ltd., will operate the Munro plants at Montreal and Point Claire as part of its paint and varnish department.

Allan Munro will joint the McArthur, Irwin organization, and will continue to superintend personally the manufacture of dry colors and insecticides at the Munro plants.

The McArthur, Irwin Co. for upwards of fifty years has been one of the largest handlers of chemicals in Canada. The acquiring of the dry color works of the Allan Munro Color Company places McArthur, Irwin, Limited, in an exceptionally strong position in the dry color and paint field. At its Yorktown, Va., plant, the McArthur, Irwin Company manufactures bichromate of soda and other important chemicals used in the making of dry colors.

ALLAN MUNRO,
Who has become associated with the McArthur, Irwin, Ltd., organization.

JOHN IRWIN,
President, McArthur, Irwin, Ltd., who have purchased the Allan Munro Color Co., Montreal.

Heretofore large quantities of chemical dry colors that could be made in Canada, have been imported by the paint, ink, textile and paint industries. The amalgamation of the two companies brings into the field an organization and an equipment to supply the home market with Canadian-made colors.

John Irwin, president, McArthur, Irwin, Ltd., is one of the best known men in the Canadian paint, varnish, color and chemical trades.

A. W. Poole, sales manager, McArthur, Irwin, Ltd., has had a wide experience in the paint trade, and for a number of years was associated with Brandram, Henderson, Ltd., and the James Robertson Co.

The Allan Munro Color Co., Ltd., was organized in 1912. Prior to organizing the company, Allan Munro, who is a son of the late Robt. Munro, was for 14 years associated with the Canada Paint Co.

All lines of dry colors, arsenate of lead, Munro's Paris green, etc., will continue to be manufactured.

PAINT NOTES

THE capital of the Ohio Varnish Co., of Cleveland, Ohio, makers of Chi-Namel, has been increased from $250,000 to $1,000.000.

* * *

AN advertising campaign is being conducted in the United States by plate glass manufacturers, who are urging the giving of plate glass desk and table tops for Christmas.

* * *

AN effort will be made to form a Paint Club in Toronto. There are several large paint and varnish manufacturers, and wholesalers in Toronto, as well as branch warehouses of paint companies located in other cities. It is felt that great benefits would accrue from occasional get-together meetings of the paint men.

A. W. POOLE,
Sales Manager McArthur, Irwin, Ltd.

Awards Made to C.P.C. Salesmen

Optimistic Reports Presented at Annual Convention of Canada Paint Co. Salesmen—Company Extended Operation During Past Year

At the annual convention of the Canada Paint Co., held recently, representatives of the company from the West, and also from the Maritime Provinces, were present, as well as managers of their different branches.

The meetings were promptly and regularly attended. They started at 9 o'clock in the morning, adjourning a short time for lunch, and then continuing during the afternoon until 5.30. Many interesting subjects were brought up and discussions on their many lines entered into.

The management reported that the Canada Paint Co., Ltd., had just completed one of the most successful years of its history, having made some very nice gains and a general increase in the sales of all their different lines.

The Canada Paint Co. during the past year have been extending their operations and have been going into the manufacture of new insecticides, dry colors, and also dyes. It is only recently this company has considered the manufacture of dye stuffs, but it was pointed out that from the success obtained during the past year there is every evidence that there is a big field in Canada for dye materials.

During the convention the advertising which has been planned for the company for the coming year was fully discussed and it was agreed that the proposition which their salesmen had to offer to the hardware dealers and merchants throughout the country this year was much stronger than they have yet offered to the trade. The advertising policy, which was well received, will be more liberal and stronger features and a stronger general advertising policy will be adopted during the coming year.

Presentations to Salesmen

A presentation was made to the three salesmen who had obtained the greatest success during the year in their general work and sales on their territories. These salesmen were: 1st, T. Avard; 2nd, A. Beauchesne, and 3rd, W. C. Boyd of the Western district. Mr. Boyd was also successful in landing a special prize for selling the largest number of assortments of Homestead Red. The prize consisted of a set of silver nut crackers and picks.

All the representatives and managers were very optimistic for further successes during the coming year, and with the bright prospects which are facing Canada today for more and better business it is generally felt that a successful year could be looked forward to.

WEEKLY PAINT MARKETS

Glass Has Not Yet Been Marked Upward

GLASS.—Although there has been an advance of approximately 20 per cent. in the price of window glass from the manufacturers in the United States, local dealers have as yet not increased their price. They have not advanced owing to the fact that some fairly heavy stocks are held, and until these are cleaned out somewhat the local prices will not follow the trend of the primary market. Wholesalers assert, however, that the price will have to be marked up in the not distant future.

PRACTICAL SHEET METAL WORK

(Continued from page 47.)

have to be allowed as described above. After forming up body, and turning edge to receive bottom, the size of blank to make same is measured for with rule and compasses.

The inner line on bottom shows size of article, the middle or incomplete line the size of edge turned out on bottom of body, and the outer line the size of blank required to seam on to body. The handle is a tapered strip with a wired allowance on both sides, the projection on either end being used to rivet on to body. The length of handle can be got by spacing, or if not marked out, by forming up narrow strip to suit, and then using as pattern for length.

At Fig. 2 is shown a pipe pattern. This needs but a small amount of time, yet quite often pipes do not fit properly. The length of the pipe is usually governed by the width of the sheet. Mark off the circumference to suit diameter required. Then mark off the seam allowances to suit folders, and at one corner mark back on the sheet the amount to be taken off to allow pipe to enter into another, as shown by dotted lines, which then forms seam allowance. In order to readily tell small end it is customary to cut a notch off that corner, and in finally completing the pipe a rivet should be placed at both ends. The small end of the pipe should have the rivet about 2 inches from extreme edge, and at the large end the rivet is placed at the edge. See sketch of pipe, Fig. 2.

(Continued in next issue.)

BEWARE OF WHITE PINE RUST

Through the invasion of the "white pine blister rust," a virulent fungus disease imported from Germany about seven years ago, Canada is seriously threatened with the extermination of her white pine resources, probably the most valuable forest asset of Eastern Canada. This disease has destroyed the white pine in Europe, has made serious ravages in the pineries of the north-eastern states, and is spreading in Ontario and Quebec. Centres of invasion are scattered from Maine to Minnesota in the United States, and from south-western Ontario to southern Quebec in Canada, the Niagara Peninsula being the most seriously infected district in the Dominion.

For its full development and for transmission to the pine, the disease is dependent on the currant and gooseberry bushes. The fact that it cannot spread directly from one pine to another offers a means of control and no effort should be spared to combat the rust by exterminating the currant and gooseberry bushes in infected or exposed districts, or at least by prohibiting the shipment from these regions of all currant and gooseberry bushes and fruit by placing an embargo on the importation of such stock. Unfortunately, the wild gooseberry is equally dangerous as an intermediary in spreading the disease.

Any loss entailed by even the total destruction of the whole currant family is insignificant compared to the value of the white pine in Canada. In 1914 the white pine production of Eastern Canada, including logs and sawn lumber, totalled $16,160,000. The cutting and manufacture of this timber furnished employment to thousands of men and supplies hundreds of industries with raw material for which no satisfactory substitute can be secured. The white pine is one of the most important tax-payers in Canada and contributes no less than $1,250,000 to the total revenue of about $4,000,000 which the four eastern provinces derive annually from their forests. In view of these facts it is evident that drastic measures should be taken at once to eradicate the disease which threatens this resource.

PAPER BALERS

In answering an inquiry in last week's issue from a subscriber who asked for the names of manufacturers of paper baling machines the names of General Sales Co., 203 Stair Bldg., Toronto, and the Stephenson, Blake Co., 60 Front St. E., Toronto, were inadvertently omitted.—Ed.

Montreal, Quebec. — Lamarre Freres, hardware merchants, have dissolved.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Dec. 13.—The advance in white lead in oil predicted last week, and for some weeks previously by HARDWARE AND METAL has arrived. It is a fifty cents advance per 100 lbs. Putty has also advanced twenty cents, and the differential between standard and pure putty prices has been advanced ten cents from 70 to 80 cents. These advances form the feature of the market this week. Linseed oil is easier. Turpentine is firmer. The conditions as regards mixed paints and varnishes are as last week, with no diminution in demand apparent as the result of increased prices, but rather the reverse, exceedingly good business being reported in mixed paints, and travellers being still busy turning in orders. Gasoline has advanced one cent a gallon to 28½ cents from the tank car. This, the first advance in Montreal territory for some time, is due to the advance in crude oil.

White Lead in Oil Advances 50 Cents

WHITE LEAD IN OIL.—An advance of fifty cents per 100 lbs. has taken place in white lead in oil. A moment's consideration of the facts regarding prices of the oil and the metal as compared to their condition in March of this year when white lead in oil reached its record price in experience of the trade, would quickly convince anyone interested that further increase in price was inevitable. The situation was pointed out by HARDWARE AND METAL last week, after several previous predictions that white lead in oil was in for an increase, and in last week's report on the paint markets HARDWARE AND METAL made the definite prediction that mixed paints having risen in price, white lead in oil would in all reasonable probability be the next line in the paint business to advance. The advance has arrived. White lead in oil which last week cost $13.80 per 100 pounds in 1 ton lots is now priced at $14.30 per 100 lbs. for the 1 ton quantity, $14.00 per 100 lbs. for orders of five tons at a time, and $14.60 per 100 lbs. for orders of less than one ton at a time. These prices break all previous records in the experience of the trade, but it is said they are fully, even more than justified, by the exceedingly firm conditions affecting the market for pig-lead, and the market for linseed oil. That the advance should have been only fifty cents per 100 lbs. is one of the features of the occasion. The last time white lead in oil jumped, it jumped like the man in the seven league boots, two dollars and twenty-five cents at a bound. Compared to that record breaking leap of last March, 50 cents per 100 lbs. is a modest advance. Lead was very firm at the time of writing, dry lead being in for another advance in market opinion.

Putty Has Also Gone Upwards in Price

PUTTY.—Owing to the increased cost of whiting, and the firmness in linseed oil, putty has increased in price this week. The increase is 20 cents per 100 lbs. for the standard grade, and 30 cents for the pure. Montreal prices are now $2.85 per hundred for putty in five ton lots, standard grade, $3.00 per 100 lbs. in 1 ton lots; and $3.20 per 100 lbs., in less than ton lots. In barrels of bladders putty prices are $3.15 per 100 for the 5-ton contracts, $3.20 per 100 for 1 ton lots; and $3.50 per 100 for orders of less than a ton. These prices are for delivery up to April 1, 1917, and the five ton contracts for delivery in quantities of not less than one ton at a time. Prices out of Montreal territory will be found shaded rather higher. Owing to the high price of linseed oil the differential between the standard putty and the pure is altered from 70 cents to 80 cents, thus causing the 30 cent increase on the pure while the standard is increased only 20 cents per hundred.

Linseed Oil Rather Weaker in Tendency

LINSEED OIL.—Still firm after previous periods of steady and rapid rises in price linseed oil this week was in a quieter condition, and very slightly easier in tone. There was no reason to account for this other than the rather general tone of duller tendency in markets due perhaps to peace rumors, and in some degree to the approach of holidays. Linseed oil however, still keeps well over the dollar figure from crusher to wholesaler, and prices to the retail show slight response to the passing weaker tendency, being barely changed from last week's quotations. Flax seed as at $2.52 per bushel on Wednesday after having been higher, earlier in the week, and the market was uncertain. No unusual demand was noted for oil, conditions being however, quite steady and satisfactory as regards demand. Prices ranged from $1.12 for the raw oil to $1.20, and from $1.15 for the boiled to $1.25 in one barrel lots, the variation being towards reduction of the lower quotations of last week, some firms keeping to their quotations of last week though the weaker tendency was shown in the oil. The price range was as follows:

Linseed oil	Raw.	Boiled
1 to 4 bbls.	$1.12-1.20	$1.15-1.25
5 to 9 bbls.	1.11-1.19	1.14-1.24
10 to 25 bbls. ..	1.10-1.18	1.13-1.23

Turpentine Firmer Two Cents Advance

TURPENTINE.—A stronger tendency was noted in turpentine this week, the price firming up about two cents per gallon due to hints of shorter supplies, and to indications of quite normal demand if not better than normal. Quotations in Montreal were as follows:

Turpentine	Per Imp.gal.
1 barrel lots	75c-80c
2 to 4 barrels	74c-79c
5 to 10 barrels	73c-78c

TORONTO

TORONTO, Dec. 15.—The item of outstanding interest in the paint trade during the week has been the advance of 50c. per hundred pounds in the price of white lead in oil. The probable trend in this market has been forecaste in these columns for some weeks past. Putty has also advanced in price and glue is in very firm market and hard to get. Prices have also advanced for that commodity. Varnish prices have not been revised upward, but will take effect in this district on December 15. Linseed oil has declined 5c. per gallon

A Reputation 187 Years Old

IN 1729 Brandram Bros. & Co. started to make white lead in London, England. They decided to make better white lead than anybody had made before. They developed a process which not only made better white lead than had ever been produced in the past, but which now, *nearly two centuries later,* is still recognized as being the world's best.

B-B Genuine WHITE LEAD

is made by this same celebrated process, and possesses the same high quality that has made the original Brandram's product famous throughout the world.

B-B Genuine White Lead is not only absolutely pure, but is whiter, of greater covering capacity, and of longer life than any other similar product. It works easily and produces a tough, elastic film that is very durable.

The merchant who sells B-B Genuine White Lead not only is assured of his customer's thorough satisfaction, but also shares in the prestige of this fine old product. Every discriminating purchaser of paint knows its quality, and respects the judgment of the merchant who handles it.

Orders for Spring Stock should be placed at once to protect prices and insure early delivery.

BRANDRAM-HENDERSON LIMITED

Montreal, Halifax, St. John, Toronto, Winnipeg

If interested, tear out this page and keep with letters to be answered.

during the week owing to the weakness in the flaxseed market. Turpentine, on the other hand, is firm and has registered an increase of 2c. per gallon. Gasoline has advanced 1c. per gallon owing to the higher price that the refiners have to pay for the crude oil. Benzine advances to the same extent as gasoline. Glass prices have not been advanced locally, but wholesalers state an upward marking will have to take place in the near future, based on the 20 per cent. increase recently announced by the manufacturers of window glass in the United States. Shellac continues in firm market, the gum having registered an advance during the week. Trade has been seasonably good. Spring bookings have kept up well on the face of the recent advances in paints. Most of the wholesalers will not start their travelers on the road until the first part of January.

White Lead in Oil Jumps Upward 50c

WHITE LEAD. — As forecast in HARDWARE AND METAL for some weeks past, an advance has been recorded in the price of white lead in oil. The new price is now 50c. per hundred pounds higher, which makes quotations $14.75 in small lots and $14.45 in ton lots. The advance follows the increasing price of pig lead, which in the primary market in New York during the week was quoted as high as $8 per hundred, while the prevailing quotation, however, holding around $7.75 to $7.80. There is still a firmness in the market even in the face of peace proposals. Peace from war would undoubtedly send the price of lead down, but the market shows no signs of weakening with the progress that has been made toward peace so far.

Linseed Oil Shows Decline of 5c in Week

LINSEED OIL.—Flaxseed again was in an erratic condition during the week and as the net result at the time of writing was a decline of almost 10c per busnel in price during the week. On Wednesday of last week the flaxseed market at Winnipeg closed at $2.63¾, and on Wednesday of this week it closed at $2.53 for December delivery. On the opening of the market on Thursday there was a firmness noticeable and seed was quoted up as high as $2.58 per bushel. But it was a doubtful quantity whether or not the market would retain this firmness. The erratic condition of the market and the weakness shown was sufficient at any rate to send the price of linseed oil down from 2c. to 5c. per gallon in the single barrel lots. With the feeding season nearly over it is pointed out that the crushers may have to get a higher price for their oil in order to compensate for the lower price that may be necessary for the oil cake. The delivery of flaxseed at Winnipeg has fallen off considerably during the week, being down on an average to 30 cars per day as compared with 50 cars per day the previous week. This would seem to indicate that the heaviest marketing of seed has taken place. The market for linseed oil is in an uncertain position at the present time. Following is the range of prices, the highest quotation representing a decline of 5c. per gallon and the lowest 2c. per gallon:

	Raw.	Boiled.
1 to 2 barrels..	$1.08-$1.15	$1.10½-$1.18
3 to 5 barrels..	1.07- 1.14	1.09½- 1.17
6 to 9 barrels..	1.06- 1.13	1.08½- 1.16

Gasoline Records 1c Gallon Advance

GASOLINE. — Following an advance in the mid-continent crude oil of 20c. per barrel within the past four weeks the price of gasoline has registered an increase of 1c. per gallon during the week and is now quoted at 27½c. to 28c. Mid-continent crude oil is now selling at $1.10 per barrel, which constitutes a high price. Last week the increase in the Pennsylvania crude oil was recorded with the statement that this crude oil product usually heralds advances to be put into effect by the other oil-producing districts. The mid-continent field is the one in which the Oklahoma oil fields are located and which affect the oil market in Canada more closely than other fields since the supply of crude oil for making gasoline comes largely from that district. The higher grades of gasoline used by rubber manufacturers have also shared in the advance of 1c. Benzine is also quoted up 1c. per gallon. The demand for gasoline is keeping up fairly well for this season of the year. There is a falling production in crude oil, which accounts for the increased price for that product and hence an increase in refined products.

Turpentine Prices Marked Up 2c Gallon

TURPENTINE.—With the increasing firmness of turpentine in the primary markets during the week and advancing prices, the local prices have advanced in sympathy. Turpentine is quoted as high as 82c per gallon, with a range to 73c. In the Southern United States stocks are being reduced somewhat owing to an export business that has been developing. The present season's crop of rosin and turpentine is now gathered, and there will be no fresh supplies until the new crop comes in in the spring. In the face of the demand that is expected in the interim the price of turpentine is considered by authorities to be in a firm position. Following are the quotations:

	Per Imp. gal.
1-barrel lots	$0.73-0.82
2 to 5 barrels	0.72-0.81
6 to 9 barrels	0.71-0.80
5-gallon	0.78-0.89

Varnish Prices Will be Marked Up This Week

VARNISH AND SHELLAC. — Although it was decided some time ago that the prices of varnish should be advanced the dealers, the date for the actual marking up of prices was set for December 15. It is expected that most of the dealers will accordingly register the advances in their prices during the present week. Some, however, are leaving the revising of their prices on varnish until they make out the new price books for the use of their travellers when they start on the road in January. Shellac is holding in firm market, and for the ordinary gum an advance of 3c. per pound has been put into effect in the ordinary grade, which is now selling at 44c per pound.

Putty Has Increased In Price 20c to 30c

PUTTY.—An advance of 20c per 100 pounds has been recorded in the price of standard putty during the week, and 30c per 100 pounds on pure putty. In 100-pound drums the standard is now selling at $3.20 and in 25-pound drums at $3.30. Pure putty is up 30c per 100 pounds, and is now quoted at $4 per 100 pounds in drums and 10c increase when put up in 25-pound drums. The increase has been caused through the high price of linseed oil and the scarcity of whiting, which are the two principal ingredients.

Glue Up In Price And Hard To Get

GLUE.—There is a great scarcity of all kinds of glue reported. This has been caused through the inability to get hides and hoofs of animals. Bone glue is about the only kind obtainable at the present time, except in cases where wholesalers have not yet been depleted of their stocks. No manufacturer is now offering any of the hide glue at all. The conditions are such that what is next to a famine exists. In consequence, prices have all been marked up. French medal is quoted at 25c per pound, and is practically off the market. English common sheet is quoted at 22c, English prima at 30c, white pigsfoot at 29c, cake bone at 22c, and gelatine glues all the way from 45c to 60c per pound. There is, therefore, great strength in the glue market.

(Continued on page 50.)

A XMAS PRESENT

Cash in on the Christmas-giving spirt. You deserve the biggest share of it, particularly in these war times, for you can offer the people articles of practical, year-round utility. No better gift could be desired than this BT Electric Washer.

Both washes and wrings the clothes. Can be attached to any electric light socket in the house and does the entire washing for but 2c or 3c. In fact the cost of the current used is practically nothing. It is simple in construction, all working parts being enclosed. Its operation is controlled by a handle and one simple turn of this will start or stop, make it wring or wash, wring one way or wring the other way. The stool or dolly which revolves in the tub, stops when the lid is opened.

Power washers are being sold in large numbers to take the place of the hand-power machines. In a few years the hand-power washers will be as much out of date as the old tubs. Here is your opportunity. Send for a machine; demonstrate it by attaching to electric light socket. Keep it running during Christmas shopping hours. You will sell several.

There is a handsome profit on this machine—3 or 4 times as much as on hand-power washers.

Profitable Varnish Selling

WHEN you sell a customer his first can of "Berry" Varnish he will ask for it next time.

Berry Brothers' Varnishes not only win trade but hold it.

The unvarying quality of our line is widely recognized by varnish buyers. This is why all products bearing Berry Brothers' label are so safe to recommend, satisfactory to handle, and easy to sell.

Here are some profitable specialties. They are staples of the varnish trade and ready sellers.

LUXEBERRY WHITE ENAMEL—whitest white, stays white. Makes a permanent snow-white finish in either gloss or dull effects.

LIQUID GRANITE—floor varnish. Makes a smooth, satiny finish. Lasting, waterproof, marproof, also adapted for bathrooms, window sills and casings, and all interior work where great durability is desired.

LUXEBERRY WOOD FINISH—for general interior work. Develops and preserves the grain of all woods, and makes a handsome and lasting finish. Rubs perfectly.

LUXEBERRY WALL FINISH—produces artistic color effects on walls. Makes a soft, velvety finish in twenty-one attractive colors and shades.

LUXEBERRY SPAR — for exterior work. Especially adapted for durability under extreme exposure—front doors, store fronts, marine work, etc. Makes a handsome finish and will not turn white under the severest conditions of wear.

Paint at Cost
to make room for
Canada Paint

Make a Clean Sweep of Your Slow Moving Paint Stock

Clear out the paint that you have to coax your customers to buy and replace it with a brand that is more than half sold when customers come to your store.

Canada Paint Products are the livest, fastest selling finishes on the market, because we are educating your customers to demand them. Every can is backed by a positive guarantee of satisfaction to both you and your customers.

If you are interested in more profits you had better send a post-card to-day asking how the C. P. "full line" Agency will help you to get a large part of the paint and varnish trade in your district.

The Canada Paint Company
Limited

Re Gauges and Prices of Sheets.

Prices on black and galvanized sheets given below are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	5 50	5 50
12 gauge	5 60	5 60

We take half the load

Link up with Lowe Brothers Limited, and you safely put the success of your paint department up to a firm that has been paramount in field of QUALITY paint-making for over 50 years. And we not only know how to make it, but how to sell it for our customers.

Lowe Brothers
HIGH STANDARD
LIQUID PAINTS

Our big success lies in our ability to give our agents "paints for sale and sales for paint."

If you are not satisfied with the service you are now getting—try

Cut out your paint worries. Put them up to us.

Lowe Brothers LIMITED TORONTO

Lyon Paint & Glass Co., Ltd., Winnipeg

Big Market for Brushes

Will you let us say to you that there is a much larger market in every community than is generally perceived. We make a hundred or more different kinds of brushes. For example, there are **Meakins Brushes** for horse stables and carriage cleaning, for garages and automobile needs, for butchers, barmen, stove-makers; for walls, radiators, floors, bannisters, cornices; for kitchens, parlors, schools; for cream separators, gun barrels, bottles.

We do not suggest that you carry stocks or even a sample of every variety of brush, but we do suggest that you have our catalogue and familiarize yourself with our various brushes in order to be able to suggest the right brush to the right person for the right need.

Sell from our Catalogue—Just a last word: Meakins Brushes are good brushes—and our catalogue will tell you why. Our catalogue is valuable. Have you a copy.

With M-S on the Can

The friends you most admire,
Who play the squarest game,
Are those who've earned the title;
They're always just the same.
And this holds good with varnish
And paint as with a man,
And people know they'll get it
With M-S on the can.

The price of good old linseed
And colors, zinc and lead,
Have mounted up like rockets
And will stay up, 'tis said,
But cheap goods don't attract us.
Poor grades all bear our ban;
The label tells the quality,
With M-S on the can.

In face of higher prices
We keep faith with the trade;
From coast to coast our label
Means double A-1 grade.
We're out to hold the business
With one set rock-ribbed plan,
The formula has never changed
With M-S on the can.

When quality is mentioned
Who asks for greater fame
Than honest worth and service
Have given to our name?
Come war, come peace, come plenty,
What'er the years may span,
What else betide, all's right inside,
With M-S on the can.

BANK OF MONTREAL

ANNUAL MEETING

Sir Vincent Meredith, Bart., President, and Sir Frederick Williams-Taylor, General Manager, Insist Strongly on Policy of Preparedness—Economy, Production and Immigration Should be Its Principal Features—67% of the Male Staff of the Bank of Military Age Have Enlisted for Overseas Service.

The Ninety-ninth annual meeting of the Bank of Montreal was held at the Head Office of the Bank at Montreal on Monday, December 4th. The addresses submitted by Sir Vincent Meredith, Bart., President, and Sir Frederick Williams-Taylor, General Manager, dealt especially with the policy of preparedness it was urgent the Dominion should adopt in order to be ready for the period of readjustment that must necessarily come at the close of the war. The principal features of the policy should be Economy, Production and Immigration.

Attention was also drawn to the temporary character of the present industrial activities in Canada and the necessity of recognizing same. Confidence was expressed in Canada's ability to solve the problems that might present themselves. Special reference was made to the large number of the staff of the Bank now serving with the Colors and the illustrious record they had made.

The President's Address.

Sir Vincent Meredith, Bart, President, in his address to shareholders, said:

I hoped when I last had the pleasure of addressing you that before this annual meeting the end of the cruel and devastating war, which has convulsed Europe would be, if not reached, at least within measurable distance. In this expectation we have been disappointed. No one can fix the day of its termination, but I am sure I express your feelings when I say we hold an unshaken confidence of the ultimate victory of Britain and her Allies.

Canada, inspired by a deep-rooted loyalty to the Empire, has given and is still prepared to give freely her gallant youth and monetary means to the great cause, upon the success of which her liberties and national existence so greatly depend.

The year has again been one of considerable anxiety to all those engaged in financial affairs. Our profits have been curtailed by payments of Government taxes at home and abroad, while earnings on loans in Canada have been affected by reduced borrowings on the part of our customers. It is not, however, an unfavorable feature that the prosperity of large manufacturing industries and business in general has produced a curtailment of bank loans, and converted borrowers into depositors. The low rates of interest on that portion of our reserves carried in New York have also been a contributing factor to diminished earnings compared with those antecedent to the war. But despite these disabilities, we have been able, after making what we believe to be full provision for bad and doubtful debts, to pay our usual dividends with the customary bonus and to carry a balance to credit of Profit and Loss Account. I trust, therefore, that under the circumstances you will consider the results of the banking year satisfactory.

Relations of United States and Allied Countries.

The wide ramifications of the business of the Bank make us necessarily deeply concerned with commercial conditions in other countries. In Great Britain, general trade has been spurred to great activity by the war's demands. There has been no lack of employment, wages have risen, money has been circulated freely, returning to the Banks in the form of increased deposits, and for the time being, at least, prosperity has prevailed, despite the displacement of labor by the war.

In the United States, also as a result of the war, there is an activity in business unexampled in its history. The shipments of gold to that country in payment of munitions, grain and other commodities have reached a sum in excess of $700,000,000 since the outbreak of the war. This huge inflow of the precious metal, together with the fact that under the new Federal Reserve Act the proportion of reserves required to be carried by the Banks has been reduced, is causing concern to many financial men, who fear that it will bring about a period of inflation to be followed by a serious financial reaction.

At present these conditions are serving a useful purpose to the Allied Countries by causing a plethora of money, thereby enabling them to borrow at comparatively reasonable rates of interest. If the United States market will continue to look with favor on further Allied loans, any menace to the financial situation to that extent will be removed.

The recent action of the Federal Reserve Board in counselling caution in the investment of American Bank funds in Treasury Bills of Entente Powers it is thought may be intended as a warning to imprudent or inexperienced bankers. It is hoped, however, that it will not bring about a diminution in Allied borrowings in the United States, with the possibility of a check in the volume of trade with Europe.

The Allied loans so far issued in New York aggregate $1,585,000,000, of which sum Great Britain has borrowed $860,000,000, France $570,000,000, Russia $130,000,000, and Italy $25,000,000.

Business Conditions in Canada.

As a result of the phenomenal crop of a year ago, coupled with vast expenditures by the Allied Governments in this country for munitions and by our own Government for requirements in connection with the war, high wages are being paid for all classes of labor, and trade conditions at the moment in Canada are buoyant in nearly all lines of business. The few exceptions will, generally speaking, be found in industries concerned with the production and sale of luxuries.

Owing to unusual adverse climatic conditions and decreased acreage, the yield of wheat this season will probably not exceed in quantity in the North-West one-half of last year's bountiful crop and will fall somewhat below the average in the older provinces; but the farmers will be largely compensated for the diminished yield by the high prices being paid for grain and all other farm products. Estimates this season are, as is usual, conflicting, but those believed to be most reliable give a wheat crop for the three North-West Provinces of 160,000,000 to 175,000,000 bushels, and for all Canada 185,000,000 to 200,000,000 bushels, and it is not improbable it may exceed these figures. Were it not for the fact that our shipments of grain to Great Britain will probably be curtailed by a shortage of ocean tonnage, the results might be looked upon as not unfavorable on the whole.

In this connection I may add that the past season has been very propitious for the dairy trade, the production of cheese and butter exceeding all previous records and marketed at unprecedently high prices.

The sudden reversal in the position of Canada from a debtor to a creditor nation, as respects foreign trade, has been remarkable. In the seven months of the fiscal year to October 31st the excess of imports over domestic exports of merchandise was, as recently as 1913, no less than $145,000,000, and in the like period of 1914 the adverse balance of trade amounted to $60,000,000. Then the gap began rapidly to close. The production of munitions of war of every description, together with the bountiful harvest of last year, carried the exports to an unprecedentedly high figure. In the seven months to October 31st, 1915, the value of domestic exports exceeded imports by $73,300,000, and in the corresponding period of this year the excess of exports over imports has reached the large sum of $160,000,000.

Nor has this reversal of the balance of trade been accomplished by contraction of imports; in the present year the value of imports has outstripped all previous records. The change has been effected entirely by shipments abroad of the huge crop of 1915, and the large output of war supplies, the exports of agricultural products in the seven months period to October 31st having risen from $75,500,000 in 1914, to $233,500,000.

It is scarcely necessary to add that this striking change in foreign trade balance has greatly ameliorated the financial situation, and is at once a cause and reflex of the existing commercial activities of the country.

Success of Domestic Loans.

In a little more than a year, Canada has issued two Domestic Loans amounting to $200,000,000 and the Canadian Government has borrowed in New York $95,000,000. The success of our internal loans is a matter of pride and congratulation. It is due largely to the spirit of loyalty of our people and a determination to do all within them to bring the war to an early and successful conclusion.

So far, a depletion of Bank deposits in consequence of these contributions has not taken place; in fact, they show month by month a gratifying increase. It must not be forgotten, however, that these increases are only partially due to the savings of our people. They may be accounted for to a very considerable extent by the husbanding of resources by our large corporations, a prudent and wise precaution in view of the uncertain conditions which now prevail and will continue to exist during the continuance of the war.

The Minister of Finance, to whom the country owes much for his wise and far-seeing administration of our financial affairs, will doubtless keep in view these conditions when making further calls on our resources which of necessity he must do from time to time.

The net debt of Canada on October 31st last was $696,000,000, an increase within the year of upwards of $200,000,000. The war expenditure has now reached $23,000,000 a month and is increasing. Ere long the public debt of Canada will reach a billion dollars and involve an interest charge of not less than $45,000,000 annually. While it is true that through adventitious circumstances public revenue has increased during the last year or two, no dependence can be placed on the continuance of this buoyancy, so that we will have to face a heavy interest charge on account of public debt, and a resulting taxation.

It is obvious, therefore, that if Canada is to escape the disability of being made a dear country to live in, the strictest economy in Government expenditures will have to be practised and all demands for public aid involving new burdens be held severely in check.

Policy Canada Should Follow.

There are three objects to which every effort must be bent:

Economy—that we may be enabled to provide the Government with funds to do our part to win the war and to make provision for taxes which we shall undoubtedly be called upon to pay.

Production—that we may increase our exports and furnish more plentifully our home markets; and above all

Immigration—(which will bring about increased production so necessary to our well-being) to be promoted at all times and under all circumstances, more particularly of settlers who seek the land.

The Railway situation in Canada has been a matter of some anxiety to those connected with financial affairs. The Dominion Government has, as you are aware, appointed a Commission of capable and experienced men to thoroughly investigate the situation in respect of the newer transcontinental railways, and while I cannot, of course, anticipate the findings and recommendations of this Commission, I may be allowed to express the hope that neither Government ownership nor Government operation will ensue, either of which, I am convinced, would prove detrimental to the best interest of Canada.

And now, as my remarks draw to a close, I am tempted, contrary to my usual practice and unrestrained by the old adage, "Never prophesy unless you know," to look into the future. The thoughts of many men are turned towards the problems that will confront us after the war. Government Commissions are dealing with them; the press devotes much space to their discussion; international conferences have met, but our first, obvious and imperative duty is to WIN THE WAR.

When that is done, new conditions will unquestionably supervene. It seems probable that for some months to come orders for munitions and war supplies will continue to keep our industrial plants actively employed.

Outlook for Post Bellum Period.

A temporary check in business generally may be looked for when peace is in sight, but I do not anticipate that any lengthened cessation of our commercial and industrial activities will immediately ensue. The period of reconstruction will probably not be accomplished for several months, and during this time Europe should provide a market for all we can produce, and new markets, perhaps, will be opened to us which we have never yet been able to reach.

These countries, however, will be "beating their swords into ploughshares," straining their energies to the conversion of munition plants into factories for the production of goods for both home and foreign trade in the effort to regain their former markets, to liquidate foreign debts and to recover the gold of which by necessity they may have been temporarily deprived.

When the rehabilitation has been effected, we in Canada must be prepared to meet in our own markets the keen competition of foreign goods. To cope successfully with the competition, expenditures on capital account should be avoided as far as possible, and resources conserved. Efficiency, efficiency, efficiency must be our watchword, conjoined with economy in all walks of life.

With regard to immigration. I do not share the optimistic views of many of our friends as to the immediate outlook. That in time we will receive a large influx of new settlers there is no doubt, but for a period we shall be at a disadvantage owing to a deficiency of tonnage to carry them to our shores from Europe, and it is not improbable that Continental nations will, for the purpose of self-preservation, place an embargo on all emigration. Great Britain, for similar reasons, though she may not take such drastic measures in regard to her daughter nations, will, no doubt, discourage intending emigrants from leaving her shores. This I say without for a moment meaning that efforts to secure immigration should be in any way relaxed.

Canada is bearing up magnificently under the strain of this world-wide war, and her sacrifices will be amply repaid by the engendering of a spirit of self-reliance, and she will emerge, a comparatively little known country, to take her rightful position in the affairs of the nations.

The future, as I have said, is beset with new problems and is not entirely free from financial anxieties, but by a young people possessing great national spirit, a territorial Empire and unrivalled natural resources, the future can be looked forward to with hope and confidence.

THE GENERAL MANAGER'S ADDRESS.

Sir Frederick Williams-Taylor, the General Manager of the Bank, then made his annual address, as follows:

Gentlemen:—In this, the twenty-ninth month of the war, it is my duty to present for your approval the ninety-ninth annual statement of the Bank of Montreal.

Also it is my combined duty and privilege to explain the chief changes in the balance sheet now before you. First, however, let me comment briefly upon the factors that bear most importantly upon the future course of our affairs and that have influenced our banking position in the year under review.

The outstanding business feature in Canada is an industrial condition more abnormal in character than ever before in the history of this Bank, or of this country.

The same statement applies in a greater or lesser degree to several belligerent and neutral countries, but in Canada economic conditions as well are in an unnatural state. This is partly due to the war, also a result of suspended immigration and of a lengthy period of an extravagance of which we are now feeling the cumulative effect.

Canada sold her record crop of last year at high prices, as in the years of the American Civil War, while this year we are disposing of a moderate crop at such steadily mounting prices that we again reap a golden harvest about equal in amount to that of 1915. The total value of last year's crop was $799,000,000.

Our much criticized adverse trade balance has disappeared as though by magic, and our exports are now vastly in excess of our imports.

Exports for year ended 31st October.....	$459,300,000	$550,500,000	$1,172,700,000
Imports for year ended 31st October.....	514,600,000	421,700,000	716,900,000
Total trade for year ended 31st October.....	$973,900,000	$972,200,000	$1,889,600,000

Many of our great industries have converted big floating debts, a cause of anxiety, into cash surpluses. As a natural outcome, our stock markets are booming. Not only is unemployment unknown, but unskilled labor commands wages two and a half times greater than the pay of our volunteer citizen soldiers, who so splendidly risk their lives for their country, while men engaged in "factory piece work" can earn as much as a college professor. It is, therefore, not surprising that the unanalytical minded, or those preoccupied with their own affairs, or those who have not contributed in flesh and blood to the Cause, should complacently say "Times are good."

Among those who do not join in this refrain are the men and women of the salaried class and those with small fixed incomes. These have been hard hit by war prices and are indeed finding it difficult to make both ends meet.

The present buoyant industrial conditions are obviously the direct outcome of a steadily increasing demand by the Allies for food, clothing and other munition of war at rapidly rising prices yielding large profits to the producers.

Payment for these war exports and for our surplus crops, coupled with loans of $275,000,000 effected in New York since the outbreak of hostilities, have brought money into the country at a rate not only unprecedented, even in the days of our heavy borrowing in London, but so undreamed of that we can advantageously ponder on what might have been our condition had there been no war.

An American authority has said, "The war has saved the United States from a great industrial and financial calamity."

In many respects conditions in Canada are comparable with those in the United States. In two notable respects they differ. Our neighbors across the border are adding to their wealth at a pace without precedent in history, but, unlike the Dominion, unpenalized by increasing national debt and loss of human life.

Canada's Contribution.

There is another side to this picture on which it is not well to dwell unduly, but which should be kept clearly before us. Post bellum conditions will surely weigh upon us more heavily or less heavily in proportion to our present indifference or our foresight, and in direct ratio to the steps we take to provide for inevitable problems and difficulties. Our agricultural production brings not only prosperity but stability; apart therefrom, though the cost of these alleged good times will not fall equally upon individuals, Canada as a whole will pay, and is paying already, in hard cash, reflected in a formidable national debt and in a great public debt per capita. We are also paying in that most priceless of all treasures, the blood of the manhood of our country. So far the cost to us of the war is 14,000 lives plus 45,000 casualties, and in money $354,000,000.

The transient nature of our increased exports alone is a simple index to a situation that commands the attention of all thinking people.

These views may not be acceptable to all, but they are common-sense and based upon arithmetical facts. To be forewarned is to be forearmed.

These are the main factors that have influenced and will influence the banking position—the movement in deposits and loans and the safety of both. Therefore, in my opinion, the business of this Bank should be conducted with such views plainly before us until the situation clears.

There are two obvious meanings of lightening Canada's coming burden, viz., thrift and immigration. The two are closely allied, for only by practising national and personal economy or thrift can we reduce our high cost of living—that most effective barrier to immigration. Upon immigration we mainly depend for the fuller development of our unsurpassed natural resources.

Thrift is overdue but can be started forthwith; immigration must wait, but should follow in natural sequence. I have no words at my command with which to adequately urge the necessity of an organized and individual effort to promote thrift.

The timely and eloquent "Call to Action" of our Minister of Trade and Commerce commands attention. I am not sure that it should not be preceded by a "Call to Reason," in order that the importance of the problems of the situation be impressed upon those who are living in, let us say, the paradise of the unwise.

Sane optimism and self-confidence are admirable national qualities, and should be the order of the day. There is a point where optimism loses its value and the danger of over-confidence begins. That is the point for nations to avoid.

To sum up, we are going to win the just war we are waging; we are bound to win the war, but let us emerge from it unexhausted in order that the victory over our enemies may be perpetuated and recurrence of such insensate destruction rendered impracticable.

With the advent of peace will come relief to our Empire, but to financial and trade conditions peace will bring a necessity for sudden readjustment that in Canada, as elsewhere, must tax every resource to the utmost. I am satisfied that our Banks stand prepared to meet these new conditions with the adaptability and strength that have made them the bulwark of the Canadian financial situation.

Bank's Record in Overseas Service.

Sir Frederick Williams-Taylor, in concluding, referred to the number of the staff of the Bank that had enlisted for overseas service, saying:

"As for the Bank of Montreal Contingent with the Colors, I have no words sufficiently eloquent wherewith to fully express our pride in their achievements, our grief in their losses. Forty-eight per cent. of our total male staff, or 67 per cent. of those of military age, have enlisted, 51 of our best have been killed, and 107 are wounded, missing or prisoners of war. Several of our men have been decorated by the King for conspicuous valor, and the whole Contingent is illustrious."

Election of Directors and Officers.

The vacancies on the Board of Directors were filled by the appointment of Captain Herbert Molson, of Montreal, and Mr. Harold Kennedy, of Quebec, the new Board of Directors being as follows:—

D. Forbes Angus, R. B. Angus, A. Baumgarten, H. R. Drummond, C. B. Gordon, E. B. Greenshields, C. R. Hosmer, Harold Kennedy, Sir William Macdonald, Hon. Robt. Mackay, Wm. McMaster, Sir Vincent Meredith, Bart., Capt. Herbert Molson and Lord Shaughnessy, K.C.V.O.

The meeting then terminated.

At a subsequent meeting of the Directors, Sir Vincent Meredith, Bart., was re-elected President, and Mr. C. B. Gordon was elected to the office of Vice-President.

A Salesman Without Salary

Read Carefully!

There is some good mechanic in some factory in your community who uses files. If you can get him to recommend to his firm

Delta Files

it means a nice order for you and steady business.

Now we'll supply a file free for you to give this mechanic to help you get things started. That is, we'll stand the expense, and will do more, if you will give us the necessary names.

We know positively this:

Delta Files will outwear and outwork any other file made. This is history. We proved it a thousand times in competitive tests. (We've been at this business of file-making 50 years, and have grown some in this period.)

We back up our claims with a money back offer and guarantee.

Ours are the only files of from 3 to 24 inches made absolutely of crucible steel.

Not many firms so deadly in earnest as we are to help you get business—but we must rely on you to work with us.

Write for Agency Proposition.

ARTICLES FOR SALE

FOR SALE — COMMERCIAL REGISTER system, good as new. This system cost me $125.00. Will take $62.50. L. F. Sherrin, Viking, Alta.

FORGETTING

One of the things we all do well is to **forget.**

Names that were household words yesterday are gone to-day.

Because people knew your Name and your Line a year ago it is no sign they do to-day. They forget easily.

Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.

A want ad. in this paper will bring replies from all parts of Canada.

Make Use of This Page for all Your "Wants"

When their lives depend upon their rifle, men use the Ross .280 High Velocity

The Ross .280 is the natural successor to the finest European imported rifles. Its low trajectory, great destructive power and remarkable accuracy make it a necessary adjunct to a successful hunt.

The Ross .303 Sporting Models are also most popular. They are made with the same action and take the same cartridge as the military weapon. They are very accurate and well finished rifles.

In ordering do not forget the Ross .22 Cadet Rifle. It is the easiest seller of them all, and each sale of a Ross Rifle means a satisfied customer.

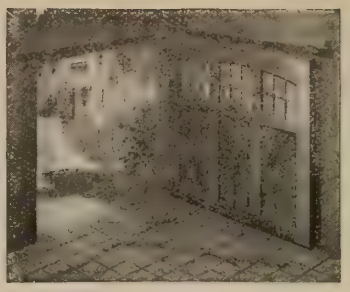
Christmas Greetings

We desire to take this opportunity to wish our many customers and friends a Very Merry Christmas and to return our hearty thanks for the liberal patronage extended to us during the past year.

The Thos. Davidson Mfg. Co., Limited

Montreal **Toronto** **Winnipeg**



NO. 435. SLIDING-FOLDING DOOR
Made for three, four, five or six doors, openings 8 to 18 feet.

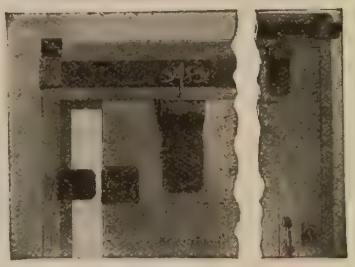
NO. 435. FIXTURES FOR SLIDING-FOLDING DOOR
Door made in four sections, folding back as shown. A very desirable arrangement, highly recommended. Perfect control — no accidents. Can be operated electrically if desired.

NO. 235. FIXTURES FOR ANGLE DOORS
Door is carried across the corner to lie flat against wall. Single or double. Thousands in use, always satisfactory.

GARAGE DOORS

NO. 235. ANGLE DOOR
Single or double.

It costs no more to hang them RIGHT than to hang them on hinges.



NO. 251. FIXTURES FOR PARALLEL DOORS
Doors may be hung in continuous series of any length. Double track with weather-strip. Three weights. Easy adjustment.

The ordinary swing door sags, and is the cause of frequent accidents.

It is the NEW IDEAS a man gets that make for progress.
It is the NEW GOODS he sells that increase profits.
Don't wait for the demand to come—create it. We'll help.
First Step—get the book "Garage Door Equipment."

Richards-Wilcox
CANADIAN COMPANY, LTD.
LONDON, ONTARIO.

NO. F1. FIXTURES FOR FLUSH SLIDING DOORS
Door slides in the usual manner, but fits into jamb like a swing door, perfecsly tight and weather-proof. Keeps garage warm. Only sure method of hanging flush sliding doors.

BUTCHER KNIVES

No. 2000 COCOBOLO HANDLES

SIZES 5 INCHES TO 14 INCHES

"UNIVERSAL" CUTLERY

offers you an opportunity for concentration on a line which you can stand back of and recommend to your customers, a line in which "chance," "maybe" and "perhaps" have no place. From the time of its conception, over half a century ago, quality has been the watchword in the manufacture of UNIVERSAL Cutlery.

¶ UNIVERSAL Cutlery is a complete line, from Paring Knives to Carvers, from Pocket Knives to Barber's Shears. All sold and guaranteed under the UNIVERSAL Trade Mark.

¶ When you show a customer UNIVERSAL Butcher Knives, Pocket Knives, Razors, Shears, Kitchen Knives, Carvers, etc., no time is lost in explanation of who makes them, and there's no doubt in his mind as to their quality. Nine chances out of ten he's using several UNIVERSAL appliances in his home right now.

The Advertised Cutlery Line

¶ UNIVERSAL Cutlery is nationally advertised. You don't have to create or wait for a market—it's waiting for you.

¶ Buyers of unknown, unbranded cutlery are getting fewer and fewer. People want the kind they see advertised, that bears the trade-mark and guarantee of a well-known, reliable manufacturer.

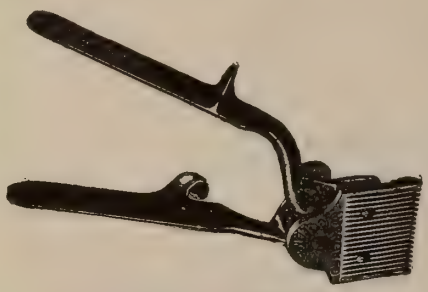
PRIEST'S HORSE and TOILET CLIPPERS

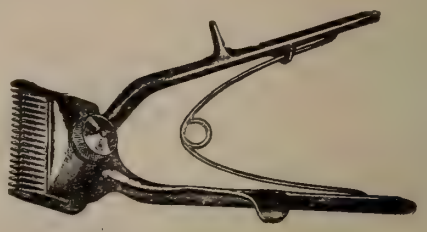
Made by American Shearer Mfg. Co.

present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.



STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25



SPEED
Best low-priced Clipper made. Retailing at about $1.00.

IMPROVED COLUMBIAN
with grooved bottom plate, retailing at about $1.50.

If you are not familiar with these goods, send for samples and compare them with others.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

Stanley Tools

Stanley Adjustable Spoke Shaves

These new and improved Spoke Shaves have a Lever Cap fastening the cutter in such a manner as to bring an even pressure on the cutting edge

The important feature is that the cutter can be quickly adjusted both endwise and sidewise by means of the adjusting screws which engage the slots near the end.

The Cutters are made from a high grade of steel, well tempered and sharpened ready for use.

The handles are japanned and through each a hole is made to enable the owner to hang the tool up out of the way.

Made in two styles—one with raised and the other with straight handles

No. 151—Raised Handle, 10 in. long, 2⅛ in. Cutter. Per doz. $6.00

No. 152—Straight Handle, 10 in. long 2⅛ in. Cutter. Per doz. 6.00

Worth Looking Into

Our Selling Service helps your Tool Department and every other part of your store. We are putting fifty years of study and experience on tool selling at your service in every way that we can—in the Selling Helps we offer you — in our handbook, "How to Sell Tools"—in our monthly paper, the "Millers Falls Star"—and through the representative that calls on you.

When you buy Millers Falls Tools, you buy merchandise plus this service that helps you turn your tool stock more quickly and puts a bigger net on your profit side.

If you are one of those who haven't yet learned what this Millers Falls Selling Service means—because you buy through jobbers or for any other reason—write us to-day and we will tell you all about it.

A Big Seller

Here's a tool with a big sale, because it is practically a hand drill and a breast drill combined. Mushroom head just fits the hand or is useable as a body rest. Three-Jaw chuck takes round shanks up to to ⅜-inch. Cut gears, pinions enclosed—ball-thrust bearing.

Ought to be included in every tool stock.

On Active Service

We think we are right in asserting that there is not a factory or workshop in your town that is not using one or other of the Famous Five Files.

The reason is obvious.

This means that every day there is a certain demand for so many of these files. If you carry a good stock of them, business will naturally gravitate to your store.

More than 60,000,000 of the Famous Five Files are sold every year. Our advertising, plus the quality of the files themselves, creates and maintains the demand.

It is up to you to get the retail sales benefit of this demand.

When ordering through your jobber, specify the Famous Five.

The Famous Five are:

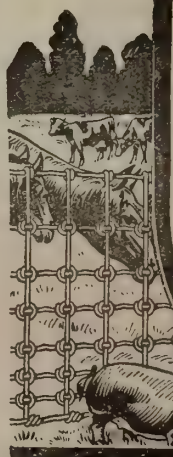
14 Years A Dealer But Finds No Better Fence Than PEERLESS

Read This Letter



Forestville, Ont., Jan. 13, 1913

The Banwell-Hoxie Wire Fence Co.,
Hamilton, Ontario

Dear Sirs:—I have been in the fence business for the last fourteen years putting up fence for farmers and have erected as high as four thousand rods per year. I have put up a good many different makes of fence but can positively say that "The Peerless" has given the best satisfaction taking into consideration even wire, no slack wires, no wires breaking, no wires rusting, and fence holding its tension which keeps the fence tight. "Peerless Fence" that I put up six years ago with posts thirty feet apart is tight and free from rust and does not sag.

Truly yours, E. G. Hooner

He's but one of the thousands of satisfied Peerless dealers—satisfied there's no better, no more profitable, no bigger producer of return orders than Peerless Fencing. His Peerless Fence agency is one of his biggest assets. If you had it you would say the same.

Peerless Farm Fence

is made of Open Hearth steel wire—heavily galvanized in such a thorough manner that it will not flake, chip or peel off. The wires are tough, elastic and springy and will not snap or break under sudden shocks or quick atmospheric changes. The joints are securely held with the "Peerless Lock" which will successfully withstand shocks and strains and yet, it can be erected on the most hilly and uneven ground without buckling, snapping or kinking. We also build a full line of poultry fence, ornamental fence and gates.

We Offer You This Coveted Agency

If you are located in our unassigned territory, we want to offer you the selling rights for this remarkable fencing. We want to add you to our list of satisfied, money making agents. We have a very attractive agency proposition. Want it? A postal brings it. Write today—now.

KIR-BEN
TRADE MARK

Greetings
to Our Friends

We drop our usual selling talks this week in order to say to our many, many friends among the readers of **Hardware and Metal** how cordially we wish them all

A Christmas of Peace
and
A New Year of Plenty

Our country has been blest, even though we are at war. Our land is free and prosperous, and everywhere there is gratitude.

Each of us who is honestly doing work of benefit to one fellowman is giving strength to Britain and her Allies in our war, and is conserving the wealth and reserves of Canada against the day of reconstruction.

In the confidence that you and we are doing what we can for the World's and our Country's good, we can with sincerity and fervor extend to all the trade good-will greetings and best wishes.

Kir-Ben, Limited
ALMONTE, ONTARIO

Kir-Ben Agency is the Best

IN extending to our many friends and customers a Christmastide of unbounded joy, we also wish for them a New Year that shall abound with unusual prosperity and personal happiness.

We also wish to thank you for the business courtesy extended us during 1916, and we shall make an effort to render such efficient service during 1917 that the year shall be for you one of prosperity and happiness.

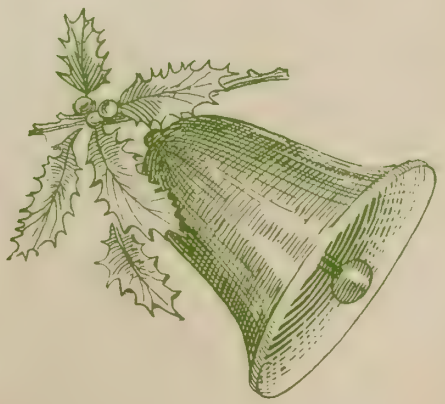
The Stratford Mfg. Company
Limited
Stratford, Canada

W. J. Carter, of Picton, Ont., recently received a letter from his son, now overseas, asking him to send over a few copies of Hardware and Metal for him to read.

Your clerks would surely appreciate their own copy of Hardware and Metal even more than Mr. Carter, whose interest in the hardware business is now eclipsed by his interest in "doing his bit."

Why not give each of your clerks a year's subscription to Hardware and Metal so that they may be fully equipped for the strenuous duties of 1917?

Subscription price is $3 per year, payable in advance.



CIRCULATION DEPT.
Hardware and Metal
Toronto, Ontario

IN full appreciation of pleasant business relations, we extend our hearty wishes to all Customers and Friends for

A Merry Christmas and a Bright and Prosperous New Year.

Christmas Greetings

Permit us to express to you at this time our deep appreciation, not only of your business, but of the kindliness and good feeling which have characterized our dealings during these last twelve months as in the past. And may we couple with our Season's Greetings our assurance of untiring service to you during the year 1917.

Send an order for one of these assortments to your jobber to-day and get one of these electric signs. You must act quickly, as our supply is limited. The sooner you have it in your window the sooner you will begin to profit by it.

CHANNELL CHEMICAL CO,, LTD., TORONTO. CANADA

BE prepared to start the New Year right, with an adequate stock of Stanley Garage Hardware and the helpful co-operation of our Service Department. If you have not been carrying this profitable line, write to-day for Catalog R124 and information concerning the Sales Helps we furnish you.

AUTOMOBILE firms say that more cars will be delivered as gifts this Christmas than ever before. The result will be many new garages, which means business for the hardware merchant.

STANLEY GARAGE HARDWARE

is at once the easiest and most profitable hardware to sell for garage doors. It is the only complete line designed especially for garage use, and its merits have been made known, through advertising, and through pleased customers, to practically all who contemplate building. It is simple to apply, costs less than devices for hanging sliding doors, and, unlike the latter, it never gets out of order, but works easily and closes the doors weather-tight.

Many New Tests Adopted During 1916

Retailers When Taking an Inventory Will Have New Problems to Contend With—An Unprecedented Condition This Year—Inventory Time a Good Time to Revise Prices

THE most phenomenal and strenuous year in the history of the Canadian hardware trade is rapidly drawing to a close. During the next few weeks the trade will be engaged in taking the annual inventory. And what a different inventory it will be from the one taken last year. A year ago wire nails would have been taken into stock at about 2.85 base. To-day the price is soaring around $4.70 base, and hundreds of other hardware lines are correspondingly higher.

Not only have prices reached new and unheard of levels, but it has been found necessary during the year to adopt many new standard lists. In a number of lines where old lists are still in effect, quotations are now list plus a certain amount, instead of list less a discount a year ago.

Those who have been following HARDWARE AND METAL'S market reports during the past year have no doubt noted the many changes which have been made in standard list prices. It is possible, however, that in some cases the merchants have neglected to make the changes promptly in their price books, or on price cards.

It is, therefore, quite evident that any merchant who makes the error of figuring costs for inventory purposes, by deducting present discounts from old standard lists will be entirely wrong in his calculations. He will prepare an inventory which does not represent the real value of the stock.

A brief summary of changes in lists which have taken place since Dec. 1, 1915, should prove of incalculable value now to the retailer who is preparing to take stock and who wants to compare list prices with the lists from which his costs were figured at last stock-taking. Practically all lists referred to in the following have appeared in full, in HARDWARE AND METAL at the time the change went into effect. Any merchant who does not possess the lists as they appeared in HARDWARE AND METAL, or who did not secure one at

Prices and Discounts a Year Ago and To-day

THE comparative prices shown below will give the reader some idea of the extent of the price changes which have taken place in hardware lines since stock-taking time last year. On many lines of shelf goods the percentage of increase in cost is even greater than is shown on the goods listed below. The prices shown were picked from the current quotations of HARDWARE AND METAL. It is possible that since the preparation of the list, which is figured on a Toronto basis, other price changes have gone into effect and will be shown in the regular market reports:

	A year ago.	To-day's price.
Wire nails	2.85 base	4.75 base
Cut nails	2.90 base	4.25 base
White lead in oil	10.20	14.45

the time from his wholesaler or the manufacturer, should lose no time in having his file of list prices made complete.

Glass Case List

On Dec. 6, 1915, glass manufacturers adopted new list prices for the various breaks of glass. The list prices as adopted then are still in effect and are subject to varying discounts.

Hardware Tack List

A revised hardware tack list was adopted on Jan. 1, 1916, and is still in effect.

Capped Goods List

A new list price on capped goods was also adopted on Jan. 1, 1916.

Both foregoing lists cover a wide range of goods carried in every hardware store. At the present time the same discount applies to each list. The prices of tacks to-day are at very high levels, and every merchant should have both of these lists on file.

Shoe Findings List

After several changes made during the early part of the year, the shoe-findings list now in effect was adopted on Aug. 10, 1916. This is also a very important list covering a wide range of goods carried in every hardware store.

Auger Lists

New list prices on auger bits, car bits and ship augers was adopted on Feb. 1, 1916, but was not generally put into effect in Canada until March 1. On common auger bits the new list showed all sizes of common auger bits up to and including 8/16 at $5 dozen list. The new list prices for sizes from 3/16 to 24/16 are as follows:—

3/16	$ 5.00	12/16	$ 7.00
4/16	5.00	13/16	8.00
5/16	5.00	14/16	8.00
6/16	5.00	15/16	9.00
7/16	5.00	16/16	9.00
8/16	5.00	18/16	10.50
9/16	5.50	20/16	12.00
10/16	6.00	24/16	15.00
11/16	7.00		

Sand and Emery Paper

New lists went into effect on sand and emery paper about Feb. 15, 1916. The lists adopted at that time are now in effect and are subject to prevailing discounts.

New Price List

In March, 1916, a new pane price list became effective on window glass, affecting star and double diamond, 26 oz. and 32 oz. glass. Copies of the pane list should be in every hardware store, in fact one would wonder how a merchant could get along without the list. Yet you occasionally run across a store without a list. There are 400 sizes shown on the list, with list prices for each size in the various grades or thicknesses of glass. Merchants who have not received copies of new list which became effective March 1 should make an immediate request for same from a glass jobbing house.

Washing Machines

Manufacturers of washing machines altered their list prices in October of this year. Practically all lines of washing machines were effected. Copies of the lists can be secured by writing to the manufacturers or wholesalers.

Brass Wire Goods

New list prices on bright wire goods including iron screw eyes and hooks, iron gate hooks and eyes, square cornered screw hooks and stove pipe screw eyes, were adopted on Nov. 20.

On the same date a new list was adopted on brass wire goods, including brass screw eyes, brass screw hooks, brass gate hooks and eyes.

Comparison of Prices

Some idea of the difference in the wholesale costs of goods a year ago, and at present can be gained by consulting the list of comparative prices and discounts shown in an accompanying panel.

Owing to the unprecedented condition of the markets more care will be required in stock-taking this year, than in any previous year. Price changes have taken place with such rapidity that it has been hard for the trade to keep pace with them and have all price changes made in price books or on price cards, etc. During the period following Christmas the average merchant will have a good opportunity of going over his stock and re-marking any lines, on which prices should have been revised but were not. Stock-taking should mean more than a mere listing of the goods. Cost prices should be revised where necessary and selling prices changed to meet present day conditions.

The Wholesaler's View

Retailers can profit by following the methods adopted of late by some wholesale hardware houses.

Hardware wholesalers state that a new era of profits has definitely started for them. Old stocks are practically at an end and so that future sales however high in price, must be based on a correspondingly high cost which will effectually prevent any duplication of the former profits. And because of the high cost the necessity of preparing for any recession that may occur at a later date has become evident.

Practical Hints on Inventory Taking

Ruling Separate Columns for Gross, Dozen and Each—Grouping Items Before Deducting Discount—Leaving Most Active Departments to the End—Checking Off Subsequent Sales

THE principle of the original cost as the basis for determining values in stock taking, was maintained by the majority of merchants whose opinions were quoted in an article in the last issue of HARDWARE AND METAL. As this often would be difficult to figure out where several different costs were represented in present stocks, it was suggested that the present costs be used and a "Reduction Percentage" worked out that would be fair to the stocks as a whole, and applied to secure the original valuations.

Coming down to the actual process of inventory making, a form is reproduced here that is in use in one of the largest retail stores in Canada, with one slight alteration. In the original form the "Discount" column appears next to the "List" column, with "Gross" price following. We have thought it more in accord, perhaps, with the natural order to reverse this, so that the "Gross" total will follow the "List" price for individual articles, casts, etc., and the discount follow, this operation leading directly on to the "Net Value" column.

Three Divisions As to Quantity

For purposes of convenience it has been found well to rule separate columns for "Gross," "Dozen," and "Each," and the figures are inserted in these columns alone, instead of adding gr., doz., or ea., as the case may be. This division may be found a useful one for all merchants who have not adopted it heretofore.

The method referred to by Mr. Aikenhead in the last week's issue of using current cost prices simplifies the work of filling in the costs in the inventory, by making use of the last ones issued, instead of tracing up the original invoices.

Taking Discount Off On Totals

There is another device that saves labor in this form, adding up the "gross" of number of items, such as screws, where the discount is the same.

Gross	Doz.	Ea.	Articles	Deff.	List	Gross	Disc.	Net Value
50			Bran Wood Screws Rd. 2 x 10		5 40	270 00		
50			" " " 1½ x 10		4 25	212 50		
40			" " " 1 x 10		3 15	126 00		
						608 50	55%	273 82
	½		Nut Cracks @ 60	60				30
		1	Gas Torch @ 31		4 80		25%	3 60

This form is the same as is used in a large store in Canada, with one exception—the "discount" and "gross" columns have been transposed, the order given here seeming to be the more direct operation. It will be noticed that there are three divisions—Gross, Doz. and Each, saving the labor of writing one of these words with every item. Another useful time-saver is the grouping of items to which the same discount applies, adding the gross amounts first and then taking off the discount from the total, as here, $608.50. The final column is used for the "net" value. These sheets should be ruled well in advance of the stock-taking period to avoid delays.

Here the discount of 55 per cent. is taken from the total of the three, or it may be thirty or forty individual items, the one operation covering the whole group.

Work Out Total in Each Department

Many merchants make up a "summary" of the various lines as each group of inventory sheets come in; in this way they know the exact value of the stock in each department, nails, cutlery, glass, paint, etc. This, too, will be found a useful matter of detail in comparing stocks one year with another.

Leaving the Active Ones to the End

Many merchants in an effort to lessen the inconvenience for customers as much as possible, clean up stocktaking of the reserve, and in the back of the store first, and leave the front portion, from which most of the selling would take place, until near the end. One object of this is so that there will not have to be deductions made from the listed quantities as a result of sales after the goods are inventoried and before the stocktaking is complete. Sometimes where several days elapse a "deduction slip" is put in for every sale that is made, so that the inventory will be corrected up to the closing day, say January 15.

Some choose paints as a department to work on near the end. One dealer declares that he can clean up the stocktaking in this line in 30 minutes, and he carries a large stock of paints.

Watches Slips for Sales

One merchant who is particularly wide awake on this, as on other subjects, told HARDWARE AND METAL that he had set aside those sales slips at the end of the day that recorded sales among the goods which he knew had been inventoried, and next morning had the articles on these deducted from those stock sheets already made up. As a rule he had stock taken of all the goods where the least selling went on, so as to avoid the trouble of making these "deductions" as much as possible.

Finance Dept. Says "Original Cost"

New Commissioner on Taxes Agrees With Theory That Inventory Should be Taken at "Original Cost"—Department Will Accept This as Fair Basis—Not After "the Last Cent."

From interview by HARDWARE AND METAL *representative with R. W. Breadner, of the Finance Dept., Ottawa.*

OTTAWA, Dec. 19.—(Special).—The attitude of the Department of Finance and the new law on the taxation of excess profits on a capitalization of $50,000 and over, in its relation to the annual valuation of the stocks, both of manufacturers, wholesalers, and retailers, has been ascertained by a staff member of HARDWARE AND METAL in an interview that was secured with the Commissioner on Taxes, R. W. Breadner.

In a word, Mr. Breadner, who has been placed in charge of the new department by Sir Thomas White, declared that the department not only "allows" the merchant and the manufacturer to value their stocks on the basis of the cost, in spite of the big advances that have taken place lately, but will encourage them to follow this practice.

HARDWARE AND METAL found the new official thoroughly in sympathy with the theory which we have been endeavoring to impress on every merchant, that he should form his plans, both in buying and selling, on the assumption that a turn is certain to come in the market with a suddenness that cannot be met on the instant, and will require "preparedness" of many months to meet with comfort.

Unwise to Inflate Values

The commissioner realizes that with the market reversed it may be difficult to secure normal profits and that it is unwise for a merchant to inflate the valuation of his stocks at this time simply because wholesale prices happen to be high.

The new Act, as most will recall, gives the Government 25 per cent. of the profits after allowing 7½ per cent. dividend on the capital. If the stock is taken in at the present wholesale cost prices, the net "profits" will be correspondingly greater than if the basis of the inventory were the invoiced cost of the goods.

Not Out After the Last Cent

"If the merchant advances his valuation as you suggest, he will show a big surplus, which at once becomes taxable, but we do not wish to gain from this. The department desires to administer the Act with equity and fairness. **We are not going out after the last cent; we are not going to jeopardize any one.**

(Continued on page 49.)

LAST WEEK'S ARTICLE FAVORABLY RECEIVED.

Many retailers and wholesalers have commented favorably upon the article entitled "Taking Inventory at Original or Present Cost" which appeared in last week's issue of HARDWARE AND METAL, and which was based on interviews by HARDWARE AND METAL'S representatives with merchants who are recognized leaders in their line. If there are any merchants who did not read the article, they should turn back to last week's issue and read the article carefully before going ahead to take the annual inventory.

Two articles dealing with stock-taking appear in this issue. Another article dealing with insurance problems under present conditions will appear next week.

Sheet Metal Roof Has Long Life

Certain Instances Where Product Has Been on Buildings for at Least Thirty Years —Maintained That Life of Metal Roofing Will Last as Long as Any Building.

"SOME of our customers' opinions and some of the information we have on hand vary as to the life of a roof, properly made with galvanized steel shingles. We would be glad if you could furnish us with some information on the subject". The foregoing is an extract from a letter received by HARDWARE AND METAL from Kidd & Clements Ltd., Wapella, Sask.

In answer to the question, Major J. O. Thorn, manager of the Metallic Roofing Company of Canada, when interviewed by a representative of HARDWARE AND METAL, stated that the life of such roofing is at least coincident with the life of the building. In the case of a wooden structure that was stated to be forty to fifty years. In the case of a brick and steel or concrete structure the length of durability would be at least one hundred years, if properly constructed.

"But metallic roofing has been brought into this country as long ago as a hundred years. Roofs that were put on thirty years ago are still on and have never been renewed in that time. Metal roofing, however, has been used in various parts of Canada for fully one hundred years. In Quebec City some of the old buildings there have had metal roofs for almost a century. These metal roofings were brought in from England. In Montreal there is the Chateau de Ramezy, one of the historical buildings of that city, which was the home of the French Governors before Canada passed under the British flag. This building was erected some time in the eighteenth century. Coming to a later time one of the landmarks of Toronto, the old Christopher Robinson home at the corner of Queen and John Streets, recently torn down to make room for the Methodist Book Room, was constructed with a metal roof. This house was built in the early part of the nineteenth century. This was not a galvanized roof either. It was of painted sheet metal. It is only of recent years that galvanized sheets have been used for metallic roofing. Now the greater portion of roofing and other sheet metal work is of galvanized material. The sheet steel is rolled thin in the rolling mill and is covered with a coating of zinc which prevents the surface from rusting. Formerly it was an iron, and sometimes a steel sheet that was used, and the surface was painted to preserve it from moisture and the corroding influences of the atmosphere. Latterly the steel plate has become more popular and has been found more serviceable. The initial cost of the galvanizing is a trifle more than painting, but once it is on it lasts indefinitely.

Metal Lasts As Long As Slate

"It should be remembered that in the construction of buildings, even before the metal roof was in general use, the eavetroughs, valleys, and metal ridge caps had been used in conjuction with slate roofs. These eavetroughs had been found to last as long as the slate roof, if put on properly. An evidence of the metal roofing is to be found in the fact that 90 per cent. of the grain elevators in the West are built of metal roofing and siding. Large milling concerns have used this material in their elevators for many years. Some of the large terminal elevators are now being built of concrete. One of the large C.P.R. elevators at Fort William is built of sheet metal. Another of their elevators at St. John, N.B., capable of holding 1,000,000 bushels of grain, is also built of the same material.

Evidence from Chicago Postoffice

"The old Chicago postoffice, built in the years 1872 to 1876, had much metal material in its construction. When it was torn down in 1897, a committee of engineers was appointed to examine the metal parts of the building. In speaking of the metal lath, the committee said: 'The metal lath taken from the partitions was found only slightly rusted from the actual contact with the moisture of the mortar. It presented no evidence of progressive and continuing rust.' This metal lath was not galvanized, nor was it even painted as a protection against the moisture from the plaster. In speaking of the examination made at that time, the *American Metal Worker*, of New York, under date of March, 1897, said: 'It seems reasonable to presume that if practically no damage was found after 20 years, the life of the metal parts of a building could be considered unlimited.'

"Sheet metal roofing has become popular in warm countries where insects abound. In South Africa, Australia, South America, the Fiji Islands and New Zealand, considerable quantities of this roofing material have been used. In warm countries it has been found that insects attack the wooden roofs and that the metal is impervious to the attacks of these. In cold climates, on the other hand, with a layer of paper underneath, it is a non-conductor of cold and will be just as warm as any other kind of roofing. Besides, it is fireproof and affords a protection in this respect. As an instance of the durability of the material, in the Western climate we might point to the fact that the roof of the old Parliament Buildings at Winnipeg was constructed of sheet metal some time in the eighties. It is also on the towers of the present City Hall at Winnipeg, erected in 1885, and which are perfectly sound to-day. As an instance of the lasting qualities of the material even when it passes through fire, we had one from Weston, Ontario, where a man's house had been struck by lightning and had burned to the ground. There was metal roofing on the house, but it had been bent and twisted out of shape. The owner had the material restamped and made fit for placing on his new house. In certain pieces this was possible.

"Coming down again to the durability of the metal roofing when subjected to the ordinary wear and tear of the elements, we have the assurance of a consulting engineer for the Canadian Government Railways that a roof placed on his house at Ottawa was in perfectly good shape after it had then been on the building for some twenty-five years. Manufacturers have testimonials from dealers who have been handling metallic roofing for twenty-five to thirty years and are still doing so. One of our first factory buildings had a metal roof. This roof has now been in existence about thirty years and is still good. We have recently erected an addition which is built of steel girders and brick walls, with a galvanized metal roof. We expect this building will last fully one hundred years and that the life of the roof will be equally as long."

NATIONAL SERVICE WEEK, JAN. 2-7.

All Canadians Asked to Co-operate

The first week in the new year has been selected by the Director-General of National Service as "National Service Week." Cards are to be distributed by the Post Office Department, and all males between the ages of 16 and 65 are asked to fill in the cards and mail them in the self-addressed envelope supplied with each card. Any person who fails to receive a card and envelope may obtain the same upon application to the nearest postmaster. All cards should be returned within ten days of receipt.

Why Do Business Men Fail?

Lack of Adaptation and Training a Serious Drawback — Overbuying and Looseness in Account Collection Also Drain on Business

ONE of the largest contributing causes to commercial failures is "lack of adaptation." At least that is the view expressed by J. H. Tregoe, secretary-treasurer of the National Association of Credit Men. Mr. Tregoe recently read a paper on "The Causes of Commercial Failures," at a meeting held in New York by the Credit Educational Committee of the New York Credit Men's Association. In referring to failures as a result of a lack of adaptation, Mr. Tregoe emphasized the fact that a business man cannot go against natural tendencies—what may be called ingrained tendencies—and the adventurer in certain fields when finding that he is ill-placed, that his enterprise arouses no enthusiasm, does not spur him on to the very best efforts, is unadapted, and must either change the tendency or make a failure of the effort.

Ability Alone Not Sufficient

Lack of training is a second contributing and an exceedingly large cause of commercial failure. Quite a number of the reasons assigned customarily for the failure of merchants may be quoted together under this head, and it is exceedingly significant. We do not say lack of ability, for an enterpriser in the commercial field may have ability, but the absence of training will render him insufficient to make a success of an enterprise.

Character Expressed in Work

A third and very important cause is lack of character. Character is not always synonymous with conscience. Character is expressed in the manner in which we do a piece of work. It reflects interest, pride, ambition, and also conscience. A defect in character will lead a merchant to take advantage of his creditors if he can, in a financial pinch. It may lead him to neglect the proper books of account when he is perfectly able to do so, and it may be the whisper that tells him how very easy it will be to put over a game on the credit man to-day and that he might as well profit by the ease with which credits may be obtained as have so many others.

Should Not Disregard Contracts

There are two defects in our social system, stated Mr. Tregoe, which lead to looseness and disorders reflected in one of the three classes above mentioned. The first is the lack of a proper regard for the contract of sale and purchase. Buyers of merchandise have not been encouraged to regard every verbal promise just as sacredly as they would a promise under a seal.

"The second is the absence of a strong morality in mercantile affairs. We are given too much to shrewd practices in the buying and selling of merchandise, in the giving and closing of credits, and have appraised at too high a figure this feature when it should have been appraised as an undesirable quality in commercial life and that it is well for a nation of traders to have the reputation of dealing with strict honesty and having morality just as firmly imbedded in their character as the ability to produce and distribute in close competition with the nations of the world.

Overbuying a Disease

"Over buying is a symptom of commercial disease. It may result from either of a number of causes. Merely rejecting an order because it is indicative of over buying does not heal the trouble. A word of counsel might be in place, but to take the risk with the hope that it can be pulled through is merely taking a gambler's chance if the cause of the over buying is not looked into.

"The absence of accountancy methods, simple but efficient, in a business is a symptom that should not be neglected.

"Neglect of correspondence is another symptom which should have a proper appraisement. If a merchant does not answer a courteous communication, and especially when he is solicited for information or the payment of an account, he is lacking of the quality that we believe contributes largely to success."

Consumer Credit a Big Risk

The importance of watching collections was also referred to by the speaker, who stated that looseness in collections is another symptom which must be reckoned with by the credit man. Giving credit to consumers is a greater risk, usually, than the granting of commercial credit, and unless a merchant aims to collect his accounts within the proper time he is heading toward losses that may affect his ability to meet his own obligations and put him eventually in the ash heap of commercial failures.

The causes of commercial failure may be classed as curable or incurable. The first class should be handled effectively and from a failing condition be restored to normality and headed toward success. Prevention work can be accomplished through the close and personal touch of the credit man with his debtors. He should cultivate his touch despite the drain upon his time and the need he feels of devoting every moment within his command to the mere business of clearing risks and closing them with dispatch.

If a lack of training is apprehended, then a word of counsel should be given him to overcome the defect and qualify himself for the conducting of a successful business. If proper books of account are not kept then the merchant should be advised that this is one of the symptoms of commercial failure, that his chances of success are reduced when he does not know with exactness what his goods cost, whether or not he is making a profit, and he cannot compete with the merchant who recognizes and is observing this requirement. If overbuying is indulged in, the merchant should be warned that this is also a symptom of commercial failure and will lead to disaster if not corrected.

Commercial failures have their causes; the causes may be traced by symptoms, and many of them are preventable.

Britain's power as it was looked upon by Germany in 1914, and as it appears to-day. It is still growing.

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, DECEMBER 23, 1916 No. 52

CHRISTMAS GREETINGS

THIS is the third Yuletide which we shall spend under the shadow of the great war. Despite the all-pervading and genuine sorrow occasioned by the European tragedy, it is indicative of the splendid feeling in Canada that preparations for Yuletide have gone on almost as though nothing untoward were happening in other parts of the world. In a few ways we stand where we stood last year, but in many other ways we have moved forward. There is to-day a better and more confident feeling than existed a year ago. The Allies to-day, while not unaware of the tremendous task before them, are better prepared for carrying on to a successful conclusion the struggle for the protection of Humanity against the monstrous Hun. And that the struggle will be carried on until a lasting peace is guaranteed has been made plain by those in authority. Many of Canada's finest sons have made the supreme sacrifice during the past year. Others are in the hospitals. Many will spend Christmas in the trenches. All that is humanly possible has been done to make the Christmas of the soldiers and their dependents a happy one. The hearty good-will of all is extended to our own soldier boys and to those of our gallant Allies. That every hardwareman will find abounding reasons for a happy Christmas, that the Christmas spirit will pervade every home, and that health, happiness and prosperity may be your portion during 1917, is the sincere wish of the Editors of HARDWARE AND METAL.

BRIGHT FUTURE FOR CANADA

LORD SHAUGHNESSY, President of the Canadian Pacific, has just returned from England. Interviewed in New York, he has given a more optimistic opinion of the future of Canada than we have ever heard uttered by him. He has always been more conservative in his utterances than perhaps conditions warranted. The inference to be drawn is that he has learned things in Europe that would indicate great prosperity for Canada in the future, so great that he felt justified in giving out the most optimistic interview that he has ever issued. Everything points to the probability that he bases his belief on the results likely to flow from the Allied Trade Treaty or the imposition by Great Britain of heavy customs tariff. We confess we have had very little faith in Allied trade agreements, if handled by the theorists making up the majority of the committee which met in Paris. Tariff Reformers dominate the new British Cabinet. An Imperial tariff and a partial arrangement for favorable trade between the Allies would mean a tremendous development in Canadian manufacturing and farming. It is probably this thought that has dominated Lord Shaughnessy's optimistic prediction.

J. W. Flavelle's very important announcement that no more munition orders would go to the States, but that Canada would have all we could handle, guarantees a continuance of good business as long as the war lasts.

The N. Y. *Sun* draws attention to the enormous area of still unexplored lands in Canada, rich in agricultural and mineral possibilities, where fortunes await the daring prospector. The *Sun* believes that after the war explorers will scatter all through these wildernesses.

TAKING THE PROFITS, EVADING THE COST

IT IS seldom that a man or a nation can avoid all misfortune. Great advantages in one line, are more than likely to be compensated for by losses in another. No business system yet devised has been able to eliminate the possible element of loss. A certain percentage of loss is inherent in all business enterprises.

What is true of a business is true of a nation. Success, prosperity aggrandizement must be paid for, and the payment is a debit item. The world, the vast majority of the world, is at war. Nations are paying in blood and treasure for the cause they hold to be right.

The greatest Neutral, our neighbor across the line, has been lifted from a period of financial and late depression into unheard of heights of prosperity. The mantle of the world's financial prestige has fallen on her shoulders. She has gained greatly and

paid little. She has paid only on the higher cost of goods for home consumption.

The retail merchants of California are presenting a petition to the President urging the placing of an embargo on foodstuffs.

Retail merchants of the state are supplied with petitions for signing. The instruction reads as follows:

"Ask your customers to sign their names and address. When they complain of the advance in price of these goods, explain the urgent necessity for an embargo to prevent their exportation to other countries.

"Let us 'FEED AMERICA FIRST' and reduce prices to normal."

In 29 States, newspapers of all political creeds are urging an embargo on wheat. Is America starving? No. Her prosperity is a by-word. The advantages of war have come to her unearned; born of the blood and tears and suffering of other lands. Such an embargo would place another burden on peoples less able to bear it. How deep does the "America First" attitude go? In a time of World cataclysm why should American prices be normal? Will she take the profits and evade the cost?

GET RICH QUICK IN OIL?

MANY Canadians can recall with regret the big oil stock selling campaigns carried on in the country a comparatively short time ago. "Get rich quick" propositions flourished galore and the usual large number of individuals parted with their hard-earned cash—receiving in return mere scraps of paper. Canada appears to be fairly free of fake oil propositions at present. But such is not the case in the United States. A word of warning now being uttered in the United States by The National Petroleum *News* should be heeded by Canadians as well as Americans. This paper states that "Too-Vivid Advertising is snaring investors and that the methods used by some companies to dispose of their stock is a discredit to the trade in general. The article states that the oil industry should call a halt on the methods used to dispose of a great deal of oil stock to the general public for they are discrediting the industry.

Representations of the value and character of oil property are exaggerated, sometimes are misleading and sometimes absolutely false. Some stock propositions undoubtedly will never return a dollar to the stockholder.

Oil propositions and sales methods of this character will soon make it very difficult to interest good capital in the oil business. The oil industry, in the last year or two, has come to be looked upon as a good and safe investment by the legitimate banking and investing interests, but it has taken years to live down the bad name the industry got at the opening of some of the western fields, and the industry should use every effort to protect its present good name.

The oil industry should at once cause the discontinuance of these unfair methods of selling stocks. It can do it in a number of ways.

THE MAN WHO READS THE ADVERTISING PAGE

RECENTLY a prominent American business magnate was asked the type question that is always put to men of his class. To what do you attribute your success? Out of every hundred who have faced this question, about 99 have dropped a few modest words relative to their own early diligence. This one exception remarked, "I read the advertisements." He was a well-posted man because he was abreast of the commercial activity of his time. He was keen to notice and quick to profit by a suggestion that might be of use to him. Out of the thousand and one advertisements that daily met his eye the one might be a lead for him to follow. Waste time? Certainly not. Nothing is waste that can show results and this system showed one man at least a fortune beyond the dreams of avarice. There is a certain hint here too for the merchant. Following advertisements may prove a very valuable occupation for you. For one thing advertising is a fine art. Men are paid large salaries for ideas suggestive enough to catch the fickle public taste. Here is a training school for salesmen. For yourself, for your clerks. If another man can sell goods by these methods, so in all probability can you.

People nowadays are reading advertisements, they know what goods are advertised and to a great degree judge them on that standard. The public judgment is of necessity your judgment if you are to serve that public successfully. If you do not study the advertisements you are placing yourself at a disadvantage; you are not abreast of the public demand. For, say what you will, the public demand is to a large extent built up on successful advertising.

Ponder the suggestion of the man who made a million by reading the advertisements.

EDITORIAL BRIEFS

BLAME for this high cost of living can be traced right back to creation. The Law of Gravitation should have been made stronger.

* * *

THE Town Council of North Bay is going after the High Cost of Living with a vengeance. They urge the Government to confiscate the Wheat in all elevators, all food in cold storage, allowing the owners a reasonable profit and to commandeer all factories, flour and cereal mills, canneries and sugar factories, and coal mines. A rather dangerous and revolutionary suggestion this. We doubt the need for such drastic action.

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

DESPITE the nearness of the holiday season and its usual quiet period, prices of hardware continue to soar. Spades and shovels have again advanced. Furnaces have advanced about 10%. Cut nails have advanced 25c per keg. Tinners' machines and tools have advanced about 20%. Lanterns are up 50c dozen. Oil and gasoline storage tanks have advanced and will probably go higher. Lubricating oils will probably advance in the near future. Padlocks, night latches and many lines of shelf hardware have advanced from 10 to 12½%. Advances have also been scored in the prices of curry combs, whiffletree irons and clevises, door checks, cotton goods, oakum, tacks, saws, lace, leathers and other lines. Christmas trade has been good. There is a severe scarcity of many lines of cutlery, skates, sleighs, etc. Collections are very satisfactory. Retailers are booking freely for spring and deliveries will be made earlier than usual. Immediately after Christmas, stock-taking will commence. Many travelers will be off the road for the next two weeks.

MONTREAL MARKETS

MONTREAL, Dec. 20.—Approach of the holiday season, and the effects of peace rumors, also the unaccountable re-actions of markets generally have caused a slightly sluggish feeling in the HARDWARE AND METAL markets this week in Montreal. Many large wholesalers are doing some stock-taking, and exceptionally interesting business and also exacting under present price conditions. Business is still reported to be far brisker than usual for the time of year, and the sluggish tendencies referred to are only felt as regards the gay rampage of prices. The trade has got so used to almost hourly alterations upwards, that when prices change only about once or twice a day, the watchers of the markets feel dull, and as if there were "Nothing Doing." Such is the effect of habit on the human creature, and even the hardwareman is no exception.

Iron And Steel Are Somewhat Uncertain

IRON AND STEEL.—There has been some uncertainty in the whole market for iron and steel ever since the German so-called 'Peace' rumors were mooted. This uncertainty coupled with the inevitable holiday slackening off in market activity, and high pressure business, maintains at present. Hints that Great Britain might cancel munitions contracts in the States, and take to manufacturing all war material within her own borders have had their effect also, and a dull market results with prices neither advancing nor declining, but sluggishly holding their own. Every opinion trends still firmly towards prospects of higher prices should the conditions that brought about the present high prices maintain. If the war lasts longer (and no one hints seriously that the end is in sight) if Britain upholds her contracts for munitions from America (and there are only rumors to the contrary) if labor continues to be as scarce as it is at present (and to multiply skilled metal workers is not the task of a moment) then for certain prices of all products of iron and steel will continue to rise. There is a huge scarcity of rails in Europe today, and Canadian rails not required for every day traffic that cannot go by other routes are to be sent to France. Prices of iron and steel are unchanged, the U.S.A. figures for pig iron being $30.75 to $31.75; basic $30.-$32.; and low phosphorus $53.00 per ton. Imported for war purposes these grades of iron would cost only freight charges and commissions additional, for other purposes there would be import duty.

Furnaces and Stove-Pipe Up

STOVES AND FURNACES.—Demand for heaters, ranges, and stoves has been better since the colder weather set in. Prices for these have not altered at all of late, and the present outlook is rather towards the maintenance of present prices. But with the probabilities in favor of firmer iron and steel should the war settle down for another prolonged period of struggle, all lines of stoves, etc., will again advance. As regards furnaces there is a ten per cent. advance on all important lines going into effect from this week, and stove pipe has advanced again owing to the tremendous scarcity of Canada plates to make it. The amount of the increase is not actually calculated at time of writing, but is estimated at around 10 per cent. Stove pipe wire is also increased in price this week. No. 19 costing $6.70 per 100 lbs., and No. 18, $6.20 per 100 lbs.

Cut Nails Advance To New Base Price

CUT NAILS.—Cut nails have advanced to $4.25 base. This is an advance which has been expected for some time by the trade. The slabs used for rolling nail plate advanced $14 per ton only a week ago, and the cost of labor for the manufacture of the product is not any less than before. Cut nails may possibly cost even more before long.

Black Sheets Have Again Advanced

BLACK SHEETS.—An advance is recorded in black sheets this week. Following are the prices quoted: No. 10 gauge, $6.00 per 100 lbs.; No. 12, $6.10; No. 14, $5.85; No. 16, $5.90; Nos. 18-20 $5.20; Nos. 22-24, $5.30; No. 26, $5.35; and No. 28 gauge, $5.45 per 100 lbs. Black sheets prices are quoted regularly in Current Quotations. Supplies are exceedingly hard to secure.

Spades and Shovels Again Move Upward

SPADES AND SHOVELS.—By the change in the discount on spades and shovels a considerable advance has been recorded during the week. In the first grade shovels the discount is now 35 and 10 per cent. as compared with the former discount of 45 per cent. The second grade discount is now 35 per cent., compared with 40 formerly, and the fourth grade is now 20 per cent. as compared with 20 and 7½ per cent. formerly. Draining tools are now 35 and 10 per cent. off list for first grade. the former discount being 45 per cent.

while the second grade are now selling at 35 and 10 per cent. whereas the former discount for this grade was 45 per cent. In hollow back scoops the discount is now 30 and 5 per cent. as compared with 30 and 10 formerly in the first grade. For the fourth grade hollow back scoops the discount is now 20 and 10 per cent., the former discount being 20, 10 and 5 per cent. Hollow backs, sand shovels and coal shovels are now advanced to 35 and 10 per cent. off list from the former discount of 45 for the first grade and to 20 per cent. for the fourth grade, the former discount for the latter being 20 and 7½ per cent. Riveted back scoops are now quoted at 30 and 2½%. for the first grade as compared with 35 per cent. formerly. The second grade riveted back scoops are also selling at 30 and 2½ per cent. and the fourth grade at the same discount as second. These latter two grades were formerly quoted at a discount of 35 per cent. For the Jones miners' spring point riveted shovels, Lists Nos. 42 and 43 the discount on these shovels is 30 and 2½ per cent., the former discount being 35 per cent. This advance follows a firmness in the market for spades and shovels that has been intimated in HARDWARE AND METAL pointing to the way to higher prices.

Taylor Forbes Goods Up

Increases in price running to an average of at least ten per cent. on all lines are records for Taylor Forbes goods mostly builders hardware, also lawnmowers, and cast iron and steel hardware. It is predicted by some that lawnmowers must increase still further before the grass of spring begins to grow.

Builders' Hardware All Up

All lines of builders hardware have increased. Ten per cent. for steel goods, and seven and a half per cent. for bronze goods is about the range of increase: There has been good demand for the lower priced grades of builders' hardware lately in Montreal, though little building is going on.

Shelf Goods Show Further Increases

SHELF GOODS.—Many lines of shelf goods are either advanced or threaten advances before long from the trend of markets this week. All lines made of iron and steel are especially worth watching at present, and yet experienced men are at the point in market consideration when they wonder if there is wisdom in stocking heavily in the thousand and one lines likely to be in regular demand, and likely to make inroads in a firm's ledger on the wrong side should prices drop when stocks are heavy.

Locks and Latches Up

Yale night latches, and padlocks have increased by at least ten per cent. on previous prices.

Globe Files Revise Prices

There has been a revision of prices on Globe files (which recently advanced as recorded in HARDWARE AND METAL). The discount should now read straight 60 per cent. Former quotations read 57½ per cent.

Spring Hinges Up

Spring hinges are all up, the advance in price being ten per cent. over previous quotations.

'Yankee' Tools Advance

There is a general advance in all lines of North Goods the 'Yankee' tool lines of shelf goods.

Ammunition Advances

American loaded shells have gone up another ten per cent. in price since last increase noted in HARDWARE AND METAL. All lines of ammunition should be most carefully watched for market changes now by the retailer anxious to maintain his profits.

Regular Lanterns Up

The price of regular lanterns has altered upwards this week. These are now $8.50 per doz. instead of $8.00.

Glass Is Up In Price

There is a new discount out on glass. The new figures are 10 per cent. and 5, instead of the fifteen and five of a week ago.

Trunk and Cabinet Locks to Go Up

Prices have been withdrawn on all trunk and cabinet locks this week, in view of another advance in these lines.

Hat and Coat Hooks Up

Hat and coat hooks (Wire) are now 85 cents per gross instead of 75 cents.

Few Baby Bens, or Big Bens

There is declared to be hardly a Baby Ben clock for sale in Montreal—certainly none to wholesale, and Big Bens are also scarce on the market, with quoted prices merely nominal.

Mop Wringer Price Changed

There is a shading upwards on White Mop Wringer prices which are selling at $18.35 per dozen rather than $18.00 the former price prevalent.

Sash Cord Firmer

Sash Cord is firmer, only the high quotes of last week being quoted now on the market that is 45 cents lb., for numbers 8 to 12; 45½ cents for No. 7; and 46½ for number 6.

Pipe Fitting Prices Withdrawn

Prices have been withdrawn for malleable pipe fittings this week, and new prices are expected shortly.

Galvanized Clothes Wire Up

Galvanized clothes wire has advanced forty cents per 100 feet by 100 feet lengths or over, except the 6 by 19. No. 19 is quoted higher for the 50 feet roll. The general advance is about 10 per cent.

Ingot Metals Keep In Unchanged Market

THE METALS.—Market for all the metals maintains much as last week, with prices unchanged, and only a slight weakening tendency noticeable in tin, also in lead, owing it is believed, partly to the effects of peace rumors, and partly to the general holiday falling off in market activity. Copper keeps a little easier at prices of last week. Spelter, and zinc are in the same shape, and antimony is quiet. The solders are unchanged. Quotations follow:—Copper, 39½-40c; spelter, 15c; lead, 9¾- 10c; tin, 51-51½c.

TORONTO MARKETS

TORONTO, Dec. 21. — Advances have been recorded in quite a number of lines during the week. Furnaces have gone up in price 10 per cent. Spades and shovels have also recorded an advance. Linseed oil and turpentine are holding in steady market with a firmness in turpentine. Cut nails have advanced 25c per keg. Tinners' machines have also advanced. Oil and gasoline storage tanks have recorded another advance, and will in all probability go higher still. Lubricating oils are in firm market, and will advance in the near future. Yale padlocks and night latches, woodenware, will in all probability advance early next year. Business has held up well during the past week, but wholesalers are looking for a slight cessation by next week, due to the quietude of the period preceding the holiday. Christmas trade has been exceptionally heavy in the face of shortages in many lines.

Spades and Shovels Again Move Upward

SPADES AND SHOVELS.—By the change in the discount on spades and shovels a considerable advance has been recorded during the week. In the first grade shovels the discount is now 35 and 10 per cent., as compared with the former discount of 45 per cent. The second grade discount is now 35 per cent., compared with 40 formerly, and the fourth grade is now 20 per cent., as compared with 20 and 7½ per cent. formerly. Draining tools are now 35 and 10 per cent. off list for first grade, the former discount being 45 per cent., while the second grade are now selling at 35 and

10 per cent., whereas the former discount for this grade was 45 per cent. In hollow-back scoops the discount is now 30 and 5 per cent., as compared with 30 and 10 formerly in the first grade. For the fourth grade hollow-back scoops the discount is now 20 and 10 per cent., the former discount being 20, 10 and 5 per cent. Hollow-back sand shovels and coal shovels are now advanced to 35 and 10 per cent. off list from the former discount of 45 for the first grade and to 20 per cent. for the fourth grade, the former discount for the latter being 20 and 7½ per cent. Riveted back scoops are now quoted at 30 and 2½ per cent. for the first grade, as compared with 35 per cent. formerly. The second grade riveted back scoops are also selling at 30 and 2½ per cent. and the fourth grade at the same discount as second. These latter two grades were formerly quoted at a discount of 35 per cent. For the Jones miners' spring point riveted shovels, lists Nos. 42 and 43, the discount on these shovels is 30 and 2½ per cent., the former discount being 35 per cent. This advance follows a firmness in the market for spades and shovels that has been intimated in HARDWARE AND METAL, pointing the way to higher prices.

Padlocks and Night Latches Up 10 Per Cent.

PADLOCKS, NIGHT LATCHES.—Following a recent advance in Yale padlocks, another advance of approximately 10 per cent. has been recorded during the week. Night latches, manufactured by the same concern, share in a like advance. The padlocks manufactured by the Canadian branch of this concern, however, do not as yet share in the advance. It is needless to say the advance has been due to the high price of all steel products.

Cut Nails Follow Wire Upwards

CUT NAILS.—Following the advance of 35c recorded last week in the price of steel wire nails, an increase in the price of cut nails has been recorded during the week of from 25c to 30c per 100 pounds. These nails were formerly quoted at $4 base, while the figure at which they are quoted now is from $4.25 to $4.30 per 100 pounds. There is a continued firmness, and further advances would not come as a surprise. Some dealers confidently look forward to wire nails selling at $5 per 100 pound kegs in the near future.

Curry Combs Have Made Another Advance

CURRY COMBS.—A further advance in the price of curry combs has been registered in certain quarters during the week. In some instances they are quoted still at net list prices, which was the selling price recently recorded in these columns. During the week, however, quotations were raised to 5 per cent. above list prices. There is a firmness in the market for these products, and it is anticipated that the selling price quite generally will soon be 5 per cent. above list.

Malleable Whiffletrees, Irons and Clevises Up

WHIFFLETREE IRONS, CLEVISES.—An advance of approximately 10 per cent. has been put into effect on malleable whiffletree irons and clevises. These goods, in common with so many other lines, are following the upward trend of the iron and steel market. Anything that bears a resemblance to iron and steel is not immune from the flood tide of higher prices.

Tinners' Machines and Tools Up 20 Per Cent.

TINNERS' MACHINES.—A considerable advance in the price of tinners' machines and tools went into effect during the week, which amounts to 20 per cent. Some of the things affected are squaring shears, bar folders, stovepipe formers, stakes, raising hammers, setting hammers, eavetrough hammers and solid punches, together with other lines. Here again the high price of iron and steel has made it necessary for the manufacturers to realize higher prices.

Chicken Leg Bands Have Advanced 5c

LEG BANDS.—Chicken leg bands have advanced from 60c per hundred to 65c per hundred. These articles are made from aluminum, and the higher price which the raw metal is bringing in the primary market has been responsible in part for the increased cost. Aluminum is one of the commodities that has had spectacular advances since the outbreak of hostilities. Aluminum in August, 1914, was selling at 19c per pound, and to-day it is quoted at 68c per pound. This is an increase of over 350 per cent.

Door Checks Have Registered Advance

DOOR CHECKS.—A considerable advance in the price of Blount and Yale door checks has been made effective by the change in the discount on these articles. The discount is not a discount, but an addition to the present list prices. These articles are now selling at 40 on present lists. These are the kind of checks used on heavy store and warehouse doors. The advance is in conformity with the increase in padlocks and night latches.

Scarcity in White French Brush Bristles

BRUSHES.—There is a scarcity of the white hogs' bristles that formerly came from France, and as a result manufacturers who have to enter the market for them are almost unable to secure them. Some, however, have small stocks, and these will take care of their needs for a short time. The shortage exists in the United States also, where some of the manufacturers are unable to manufacture white-haired shaving brushes from this article at all, and are resorting to black bristles. Representatives of one Canadian manufacturer of paint brushes are not permitted to make quotations on this line of white bristle brushes until they have submitted the matter to the head office of the concern. The labor problem in France is having a disastrous effect on the market for bristles. Until the war ends there is every possibility that the situation will become worse.

Woodenware Firm; Advances Are Probable

WOODENWARE.—There is a firmness in the market for woodenware owing to the increasing cost of raw materials and the higher cost of labor in manufacturing. An advance of 10 per cent. was recently recorded in the lines of William Cane & Co., of New Market, and there is strong probability that a further advance of 10 per cent. will be made in these lines in the early part of next year. Some concerns who signed contracts for woodenware last March at an advance of 5 per cent. over the then prevailing prices have demonstrated their far-sightedness, and thereby have benefited financially.

Rope and Twine Hold Steady at Advance

ROPE AND TWINE.—Cordage is in what might be termed an erratic market. Following the advance of 2c per pound recorded in all rope and sisal products last week, there is a continued firmness in the market, particularly for sisal. Cordage men would not be surprised at a still higher turn to the market. The trade in rope is fair at the present time, but in small twine the market is quiet on account of the Christmas trade being well supplied. Until these stocks are worked off, the trade will continue quiet.

Lanterns Have Gone Up 50c Dozen

LANTERNS.—Lanterns have registered an advance of 50c per dozen during the week in the cold blast and tubular. These makes are now selling at $8.50 per dozen, as compared with the former price of $8. The copper, well japanned, has also registered an advance, being now quoted at $14.25, compared with $13.75 formerly. In certain instances the Jumbo has also been advanced 50c, making the selling price now $9.75, while the japanned dash is selling at $11.25 and the Searchlight No. 20 at $11.75. Some wholesalers have not advanced the price of the japanned dash and the Searchlight No. 20.

Cotton Goods Have Been Marked Higher

AWNING CORD, COTTON GLOVES.—Following the advances recorded last week in cotton clothes line, sash cord and cotton twine there has been advances in awning cord and cotton gloves of approximately 10 per cent. There is a weakening in the raw cotton market, spot cotton being now quoted down as low as 17.15c per pound, as compared with 20.60c per pound at one time within recent months. The better lines of gloves are the ones that are primarily affected by the recent advances.

Gasoline and Oil Storage Tanks Up

STORAGE SYSTEMS.—Another advance of 10 per cent. has been put into effect on the lines of storage tanks for gasoline and oil of various kinds carried by the Imperial Oil Company. This advance follows a recent heavy advance in the same line of goods, in some instances amounting to 23 per cent. The high price of raw materials and labor is given by the manufacturers as the cause for the higher prices.

All Lubricating Oils Due to Advance

OILS.—Changes have gone into effect during the week on the method of selling all lubricating oils. These oils henceforth will now be sold on a bulk basis, with an extra charge of $2 made for the barrels. In the past the barrels have been charged for at the rate of 90c each. When the barrels are returned, the additional charge of $2 for the barrel is credited. The increased price in woods for the manufacture of barrels and the difficulty in obtaining coopers to make the barrels has necessitated the increased price. An advance in the price of all lubricating oils has been decided upon by some of the refiners, and cylinder oil, automobile oil, black oil, paraffine and machine oil will all share in the advance. Prices have not yet been announced or the extent of the advance, but it is expected this will be made known in the near future. There has been another advance in the price of mid-continent crude oil of 10c per barrel during the week, and this has put a firmness in the market for all the coarser oils. Last week an advance of 1c per gallon was recorded in the price of gasoline. Coal oil is in a firm market as a result of the recent advances in the crude material.

Oakums Have Gone Up 1c to 1½c Pound

OAKUM.—An advance of 1c per pound has been made on the price of U. S. Clipper oakum, which now makes the selling price 18c. On the U. S. Navy (English) there has been an advance of 1½c per pound, which now makes the selling price 16½c per pound. Plumbers' spun oakum and the other brands remain unchanged. Following are the quotations:

Plumbers' Spun oakum	$0.08
U. S. Navy (English)	0.16½
U. S. Navy (American)	0.18½
U. S. Clipper	0.18
Best American	0.08

Tacks Have Advanced; Shoe Findings Also Up

TACKS, SHOE FINDINGS.—A revision of the tack list discounts during the week provides for a substantial increase in these goods. Where the discount was formerly 75 per cent., the new selling price is 70 and 10 per cent. off the list adopted January 1, 1916. Capped goods also come under the same advance, with the same discount prevailing of 70 and 10 per cent. off list. The lists on shoe findings have been changed, and an advance of approximately $1.50 on nails and $2.25 on tacks is provided for. The last change in shoe findings took place on August 10, 1916.

Cross-Cut Saws Up 15 to 20 Per Cent.

CROSSCUT SAWS.—An advance of 15 to 20 per cent. has been put into effect on all Canadian makes of crosscut saws during the week. This advance follows a recent one made in hand saws. Steel used in saws has also had big advances in common with every other line of steel product.

Furnaces Up 10%; Stoves Also Advance

FURNACES AND STOVES.—An advance of 10 per cent. has been made in the price of furnaces of certain manufacturers during the week. This follows a recent advance of another manufacturer in the price of steel ranges and cast ranges, which have been advanced 15 per cent. on the steel ranges and 10 per cent. on the cast ranges. There is a firmness in the market for all stoves and ranges, some of the large manufacturers refusing to take orders for shipment at present prices beyond April 1. This would seem to indicate that the manufacturers are looking for higher prices after that date. While all the manufacturers had not advanced their furnaces, other advances are expected around the first of the New Year. There has been an exceptionally heavy run on gas ranges of all kinds. Some of the manufacturers have even cleaned out their stock samples in order to take care of the demand. Orders have had to be refused, moreover, on account of the shortage of supplies in the face of the heavy demand.

Lace Leathers Up 10 Cents Per Pound

BELTING.—There has been an advances of 10c per pound on side lace leather, which now makes the selling price $1.30 per pound. Cut lace leather has advanced a like amount, and is now quoted at $1.50 per pound. There is a firmness in the market for belting. Dealers are refusing to accept large orders on contracts in the future, preferring to wait until after the New Year to see what condition the hide market will be in. Recent discounts still hold at 30 and 10 per cent. on extra quality, and 30, 10 and 10 on standard quality.

Galvanized Sheets Make Upward Stride

GALVANIZED SHEETS.—A considerable advance has been registered in the price of galvanized sheets during the week by firms that have maintained a lower price for some time on account of stocks which they had on hand. The Apollo brand is now quoted at $6.35 for No. 14 gauge, $6.45 for No. 16 gauge, $6.60 for Nos. 18 to 20, $6.75 for Nos. 22 to 24, $6.90 for No. 26, $7.20 for No. 28, and $7.50 for 10¾ oz. There is a continued firmness in the market.

Pig-Iron Prices Are Still Withdrawn

The market for pig iron continues very strong, and prices are still withdrawn. While the demand for foundry grades of pig iron is light, prices are very firm, as most furnaces are now producing basic iron for steel-making. Bessemer iron has advanced again, being now quoted at $35.95 a ton, while standard low phosphorus is also higher at $53 a ton, Philadelphia.

Steel Prices at High Level

The peace proposals put forward by Germany and Austria have been the cause of considerable discussion in iron and steel circles during the week, but the feeling is prevalent that nothing will come of them at this juncture. The fact that the mills have practically twelve months' business on hand had a steadying influence on the market, and the news did not cause as much excitement as might have been expected. There is, however, some uncertainty as to what may develop in this regard, and this will probably check the strong upward movement in prices, which is certainly desirable. There is little doubt that prices have reached a dangerous level, forced up to some extent by the consumers themselves in their anxiety to get steel. There are no price changes of importance to note this week, and the market is firm. It is understood that Canadian interests contemplate purchasing large tonnages of shell steel in the United States for delivery any time during 1917. This indicates the sold-up condition of our mills. Canadian shipbuilding plants are seeking 20,000 tons of plates in the United States.

LEAD.—The lead market is in much the same condition as last week, although prices locally have firmed up following the recent high prices effec-

tive in New York and St. Louis. Peace rumors unsettled the U.S. market and put a stop to buying. Quotations locally are now 9¾c lb.

Copper.—The copper market has been rather unsettled since the peace rumors started. It is expected however that now the Allies have spoken the market will again gain strength. Locally the price is unchanged at 37½ to 39c.

Spelter.—The spelter market is unsettled, and quotations locally have declined. They now range from 14c to 15c.

Tin.—The market locally is unchanged and the price remains at 84c lb.

Antimony.—There is no change in antimony which remains at 18c lb.

Aluminum.—The market is quiet and firm. The price locally is 68c lb.

LONDON MARKETS

LONDON, Ont., Dec. 21.—The approach of the holiday season has not affected the upward trend of prices. Another list of important changes, all in an upward direction, have gone into effect. Chief among these are advances on cut nails, sash weights, bread mixers, sash pulleys, valves, saws, Yankee tools, Mrs. Pott's irons, lanterns, whiffletree trimmings, etc. Business continues good, both for Christmas goods and regular winter lines. Collections are very satisfactory. There is still a shortage of many hardware lines. Next week stock-taking will be in full swing in many of the retail stores, as well as in wholesale houses, and many travellers will be in off the road.

Spades and Shovels Again Move Upward

SPADES AND SHOVELS.—By the change in the discount on spades and shovels, a considerable advance has been recorded during the week. In the first grade shovels, the discount is now 35 and 10 per cent., as compared with the former discount of 45 per cent. The second grade discount is now 35 per cent., compared with 40 formerly, and the fourth grade is now 20 per cent., as compared with 20 and 7½ per cent. formerly. Draining tools are now 35 and 10 per cent. off list for first grade, the former discount being 45 per cent., while the second grade are now selling at 35 and 10 per cent., whereas the former discount for this grade was 45 per cent. In hollow-back scoops the discount is now 30 and 5 per cent., as compared with 30 and 10 formerly in the first grade. For the fourth grade hollow-back scoops, the discount is now 20 and 10 per cent., the former discount being 20, 10 and 5 per cent. Hollow backs, sand shovels and coal shovels are now advanced to 35 and 10 per cent. off list from the former discount of 45 for the first grade and to 20 per cent. for the fourth grade, the former discount for the latter being 20 and 7½ per cent. Riveted back scoops are now quoted at 30 and 2½ per cent. for the first grade, as compared with 35 per cent. formerly. The second grade riveted back scoops are also selling at 30 and 2½ per cent. and the fourth grade at the same discount as second. These latter two grades were formerly quoted at a discount of 35 per cent. For the Jones miners' spring point riveted shovels, lists Nos. 42 and 43, the discount on these shovels is 30 and 2½ per cent., the former discount being 35 per cent. This advance follows a firmness in the market for spades and shovels that has been intimated in HARDWARE AND METAL pointing the way to higher prices.

New Price on Lanterns 50c Higher

LANTERNS.—An advance of 50c per dozen has gone into effect on cold blast and short pattern lanterns, making a new quotation of $8.50 per dozen. No. 25 dash lanterns have also advanced 50c, and are now quoted at $11.75. Copper well lanterns have advanced to $15.

Sash Weights Advance

New and higher prices have gone into effect on sash weights, and quotations are now as follows:—Solid, per 100 lbs., $2.50; sectional, 1 lb., $3; ½ lb., $3.25.

Sash Pulleys Higher

Steel sash pulleys No. 12 have advanced to 40c doz.

Clevises, etc., Go Higher

An advance of 10 per cent. has gone into effect on clevises, whiffletree centres, neck yoke ends, and neck yoke centres.

Valves Again Advance

Standard globe, check, and angle valves have advanced 10 per cent., and are now quoted at 45 per cent. off list. Jenkin pattern have made a corresponding advance, and are also quoted at 45 per cent. off list.

Pott's Irons Up Again

Mrs. Pott's irons have again advanced and are now quoted at $1.30 per set for No. 50 N.P., and $1.15 per set for No. 55 plain.

B. D. Hangers and Track Higher

Safety barn door hangers have advanced to $7 doz. Storm King hangers have also advanced to $7 doz. Barn door track, 1¼ in., has advanced to $6.75 per 100 ft.

Bread Mixers Advanced

Universal bread mixers have been advanced in price, and are quoted at $25.90 doz., for 4-loaf size, and $36.66 doz. for 8-loaf size.

White Lead Firm

White lead in oil is firm at the recently advanced price of $14.45 per 100 lbs. in ton lots, and $14.75 per 100 lbs. in less than tons. There is, however, a somewhat easier tone to the pig lead market. Demand locally is light.

Putty is firm at the new and higher prices announced last week as follows:

	Per 100 lbs.
Standard putty, 100-lb. drums	$3.20
" " 25-lb. drums	3.30
Pure putty, 100-lb. drums	4.00
" " 25-lb. drums	4.10
Standard putty, bladders, bbls.	3.60
" " " less	4.00

Cut Nails Advance 25c Per Keg

NAILS.—Cut nails, after a short period of quietness, have advanced 25c per keg, and are now quoted at $4.25 base. Wire nails are firm at the high level of $4.70 base reached last week. There is a shortage of some sizes of wire nails.

Rope Firm at New Price

Rope is firm at the advanced prices noted in HARDWARE AND METAL last week. Quotations are as follows:—Pure Manila, 25½c basis; British Manila, 21c basis; African hemp, 21c basis; cotton, 3-16 in., 41c lb.; cotton, ¼ in. and larger, 39½c lb.

Glass Unchanged

There is only a fair demand for glass. Single diamond is quoted at 20 per cent. off case list; double diamond, 20 per cent. off case list; cut lights, 50-5 per cent. off pane list.

Yankee Tools Up 10 Per Cent.

Yankee tools have advanced 10 per cent., as announced in another report in HARDWARE AND METAL last week. New net prices on some of the best sellers are as follows:—

Spiral Screw Drivers:	Doz.
No. 30	$23.55
No. 31	31.55
No. 35	18.05
No. 130	27.05
Ratchet Drills:	
No. 40	22.50
No. 41	22.50
No. 42	17.20
No. 44	24.95

Furnaces Advance 10 Per Cent.

Hot air heating furnaces have advanced 10 per cent. Stoves of all kinds are decidedly firm in price, owing to the high cost of pig iron and all materials entering into the manufacture of stoves. There is a severe scarcity of certain designs in gas ranges and other stoves.

Spring Booking

A good volume of spring booking has been coming in to local wholesalers, and there is a tendency on the part of some merchants to ask for early deliveries owing to fear of not being able to secure deliveries in the spring. Most merchants are careful in their buying, and are not taking many chances.

Retailers have been making a strong bid for Christmas trade, and have been advertising liberally in the local papers. The result is a heavy demand for sleds, skates, snow shoes, cut glass, silver-plated ware, etc.

WINNIPEG MARKETS

WINNIPEG, Dec. 21.—With the final week before Xmas, jobbers report business has dropped off considerably although they are, of course, busy with final preparations for stock-taking, which will, in the majority of cases, be written down during the days between Xmas. and New Years, and then it is expected that spring business will commence in full swing.

Owing to the uncertainty of supplies of certain lines of stock, the retailers will take delivery of a large percentage of their spring orders earlier in the year than has been the rule before and jobbers are preparing to handle a big volume of business during the months of January and February. Prospects of big business during the early part of the year at least are practically assured if orders now on hand are any indication of what the trend will be.

The year just now closing will be a record one for many lines of business and the hardware trade has certainly enjoyed its fair share of the prosperity in the West during the past twelve months. 1917 also promises well, so Europe is smiling and confident as to the result which will be obtained.

Great Activity In The Markets

The closing days of the year 1916 are are being marked with great activity in the various markets and new prices which will greet the New Year, are making levels never dreamed of two years ago. That the end is not yet is the prediction commonly heard—the question is arising—how much more will the people stand?

It was stated in this report last week, that new prices were being issued on enamelware, tinware and galvanized ware and the quotations now available are most decidedly high.

Pieced ware now sells at 25 per cent. advance on list. Galvanized ware now sells at 17½ per cent. advance on list.

Except heavy tubs and pails which are 7½ per cent. advance on list.

The discounts on enamelware are now as follows:—Canada, premier and diamond, 20 per cent. Imperial, colonial and pearl, 30 and 12½ per cent. White ware, 50 and 10 per cent.

These new discounts reveal the following net prices on lines familiar to the average retailer:

Pieced flaring water pails, I C 6 Qt., $2.13 doz.; 10 qt. $2.80 doz.; 14 qt., $3.25 doz.

Pieced coal oil cans, flar top, per doz.:—1 gal., $4.25;-2 gal., $6.60; 5 gal., $10.55.

Galvanized buckets straight per doz.: 12, $4.70; 14, $5.30; 16, $6.00; Flaring, 11, $5.30; 12, $5.85.

Galvanized wash tubs, 13, $6.70; 0, 10.85; 1, $14.55; 2, $15.85.. 3, $18.10.

Galvanized flar top oil cans per doz.; 1 gal. $4.25; 2 gal. $6.75; 5 gal. $15.85.

Copper wash boilers planished, No. 9, $5.85 each.

Stove-Pipe Elbows and Pipe Higher

Another change is also noted in the price of stove pipe elbows and pipe, the following quotations now being in order:

Stove pipe elbows heavy, per doz.; 6, $2.35; 7, $2.63;8, $3.90. Light, 6, $1.80; 7, $1.95.

Patent standard stove pipe, per 100 lengths, 6, $15.25; 7, $16.35.

Iron Pipe Goes Still Higher

Once again is wrought iron pipe to the fore and new prices now being made are as follows, an advance of nearly 5 per cent.:

Per 100 Ft. —	Black	Galv'd.
¼ in.	$ 4 14	$ 6 57
⅜ in.	4 28	6 66
½ in.	5 49	7 25
¾ in.	6 71	9 14
1 in.	9 90	13 50
1¼ in.	13 41	18 27
1½ in.	16 07	21 85
2 in.	21 60	29 39

Sheet Copper and Churns Advanced

Sheet copper is also featured this week in advanced prices, new quotations being 10c per lb. higher than formerly. New prices are for tinned, 60c per lb. planished, 75c per lb.

For some time the new prices shown below on churns has been talked of, so the announcement of their coming into effect will not come as any great surprise. The advance approximates 12½ per cent. and reveals the following figures:

Daisy and Favorite, Each, No. 0, $6.30; No. 1, $6.30; No. 2, $7.00; No. 3, $7.70; No. 4, $9.10; No. 5, $11.20.

Bar Iron and Steel Reach Higher Levels

Another important change to come into effect during the week is that affecting bar iron and the various lines of steel. The advance in bar iron is 10c per lb. base, making the new price $3.60 per 100 lbs. base.

The new prices of steel are from 50c advance up as these prices will show: Per 100 lbs.:—Steel angle, $4.25; machinery, $5.00; plow common, $6.00; plow crucible, $7.00; sleigh shoe, $4.00; spring, $5.00; tire, $4.50; band iron—black, $3.85 per 100 lbs.

Rope Advances 2c Per Pound

An advance of 2c per lb., in the price of rope is one of the most important jumps to take place at one time and brings prices up to the following high levels:—Pure Manila, 27c lb. base; British, 22c lb. basis; Sisal, 20c lb. basis; Lath yarn, 20c lb. basis.

Paint Materials Are Generally Firm

Another week of comparative quiet in the grain market accounts for the firm prices being maintained for linseed oil. Talk of peace influenced the markets considerably for one or two days but the sudden drops in price were practically all recovered. Prices remain as follows:—Raw, $1.40 per gal. bbl. lots; boiled, $1.43 per gal., bbl. lots; turpentine, 85c per gal., bbl. lots; 88c per gal., ½ bbl. lots; 90c per gal., 5 gal. and 1 gal. lots.

An advance is noticeable in the prices issued on white lead of about 5 per cent. This brings quotations for pure to $15.35 per 100 lbs., ton lots; $16.00 per 100 lbs., less quantity.

FINANCE DEPARTMENT SAYS "ORIGINAL COST"

(Continued from page 39.)

Just as in the case of the "stocks" of the stock market, we do not recognize high quotations as real assets, for the market may drop the next day. We would accept the price paid by a "private" shareholder as a far more reliable criterion—the value he considers the stock to hold for investment purposes.

Take in Stock at Actual Cost

"So with 'stocks' in the form of merchandise. We would not consider the increases in value as profits until the goods actually had been disposed of. **Let the merchant set down his merchandise at actual cost;** if he makes more when he comes to sell it, he will get it next year; if the market goes down, then he is not out in his estimate for 1916."

Many Inspectors at Work

The department has a number of inspectors at work in various centres advising manufacturers, jobbers, retailers, and all other kinds of business firms as to the proper method of figuring out their returns to the Government. There are two or three at work practically all the time in Toronto, one in Hamilton district, one in London, two in the Lower Provinces, three in Quebec, one in Winnipeg, another in Calgary, another In Vancouver, and so on.

EVENTS IN THE TRADE

Steel Co. Convention

Hamilton, Ont.,—The fifth annual convention of the sales staff of the Steel Co. of Canada, Ltd., was held here on Dec. 12, 13, and 14.

Mr. Lariviere in Mourning

Died, in Montreal, on December 10, at the age of thirty-one years, J. Arthur Villeneuve, son-in-law of Mr. Frederic C. Lariviere, the well-known hardware merchant of Montreal.

Business Changes

Laura, Sask.—J. C. Gordon, hardware, has been succeeded by Robt. A. Ross.

Medicine Hat, Alta.—Dominion Harvester Co. has sold out to Canadian Foundry & Machine Co.

Redcliff, Alta.—Redcliff Motors, Ltd., has sold out to Canadian Foundry & Machine Co., Ltd.

Ontario Incorporations

Canadian Machinery Company, Ltd., capitalized at $40,000, head office St. Catharines.

Empire Brush Co., capitalized at $40,000, head office Toronto, to manufacture and sell brushes, etc.

Daylyte Lamp Company, Ltd., capitalized at $200,000, head office Guelph, manufacture and deal in tungsten lamps, incandescent lamps, etc.

Industrial Notes

Montreal. — The Dominion Copper Products Co. has increased the capital stock of the concern to $3,500,000.

Montreal, Que. — Canadian Allis-Chalmers, Ltd., will build a new forging plant at their Rockfield works near here.

Toronto, Ont.—The Canadian Carbon Co. has received a permit for the erection of a new factory on Paton road, to be three stories high and to cost $23,500.

Vancouver, B.C.—It is understood that a new steel plant will probably be established at Eburne, near here. W. H. McLaws, president of the Alberta Rolling Mills at Medicine Hat, Alta., is interested in the scheme.

Montreal.—The Foundry & Machine Co. have bought out the Federal Brass Foundry Co. and are putting up a brick addition to the plant which will be 45 feet square and two storeys high.

Montreal.—Montreal Machinery & Supplies, Ltd., have been appointed agents in Canada for the Alston Saw & Steel Co., Folcroft, Pa., and for the Rich Tool Co., Chicago, the particular specialties being high-speed drills, reamers, and rivet sets.

Personals

M. G. McDougall, who makes his headquarters in Saskatoon for D. Ackland & Son, manufacturers of blacksmith supplies, Winnipeg, has gone East with his wife, and will spend the holidays at his home.

St. John, N.B., Notes

The winter port season is now on in full blast and large quantities of supplies are being loaded into the steamers which are crowding in to port. During the month of November, six transport steamers, four C. P. R. steamers and one barkentine were handled here. December traffic gives promise of a record month's work. As arranged by Sir George Foster, on his recent visit in this city, the samples of manufactures of Germany and Austria, which have been on exhibition in Great Britain and in some of the larger Canadian cities, were brought to St. John, where they were shown under the auspices of the Board of Trade. The exhibit will go to Halifax from here and from thence to Great Britain. HARDWARE AND METAL described the exhibit in the November 11 issue.

Though building conditions have not yet returned to normal, a gradual improvement is noticeable. For the eleven months of 1916, the values reached 462,350, compared with 323,400, for the corresponding period of 1915.

Sardine season finished.

Winnipeg News

Travelers of the Merrick-Anderson Co. met in convention at headquarters, Winnipeg, beginning Dec. 13.

J. W. Ackland, president of D. Ackland and Son, Winnipeg, has returned home from a trip in the hardwood lumber district across the border.

The E. B. Plewes Co., Winnipeg, has been incorporated as a limited liability company, and is now known as Plewes, Limited. They are manufacturers' agents, and carry stocks of hardware and machinery supplies. Their offices and warehouses have been moved from 120 Lombard street, to 197-199 Princess street.

Appointed Toronto Manager Fairbanks-Morse Co.

Fred W. Evans have been appointed manager Toronto branch of The Canadian Fairbanks-Morse Company. Mr. Evans has been acting manager of the Toronto house for the past year, and his appointment to the managership of the office is in recognition of the excellent work which Mr. Evans has been doing. Mr. Evans has been with the Canadian Fairbanks-Morse Co. for a great many years and has had excellent experience, particularly in the machine tool end of the business.

BOUGHT DAISY KETTLES AT LOW PRICE

A retailer this week, directed HARDWARE AND METAL'S attention to the fact that Daisy tin tea kettles are quoted by some of the manufacturers at $2.85 doz. less 10 per cent. or $2.57 dozen net. The same kettles, it is claimed, are being sold by a large department store at 15 cents each. The retailer purchased six from the department store at 15c each or $1.80 dozen. On attempting to order a second half dozen, he was informed that only two could be sold to a customer.

Another retailer located near a 5, 10 and 15c store recently purchased kettles at a price which would force him to ask at least 25c retail. He placed the kettles in his show window with price tickets at 25c. Two days later the 5, 10 and 15c store put in a huge display of the same kettles at 15c each. The retailers are wondering whether they are being stung, or whether the department and syndicate stores are selling at a loss. Who can supply the answer? Many will say, "Oh the department stores had booked up at an old price." Wonder if this is the reason? Some of the retailers don't think so.

INLAND REVENUE DEPT. REPORT ON FERTILIZERS

Out of 365 Samples Examined, 330 Found to Meet Claims

Officials of the Inland Revenue Department gathered 365 samples of fertilizers for inspection this year and the report just issued shows the following: —

(Continued on page 60.)

Changes in Canada Paint Management

W. H. Newton Appointed Manager of Manufacturers Sales—S. M. Ward Appointed Sales Manager—Both for Many Years With C. P. Co.

The Canada Paint Co., during the past year has been devoting a great deal of time to manufacturing special lines for the special manufacturing trade. This business is increasing to such an extent that it was found necessary to appoint a manager of the manufacturers' sales, who could devote all his time to watching this special line of business.

W. H. Newton, formerly sales manager, was given this appointment. Mr. Newton has been with the Canada Paint Co. for a great many years, and owing to his wide experience and knowledge of paint manufacturing and painting trade, is ably fitted for this responsible position.

S. M. Ward, who was formerly connected with the sales promotion department, has been appointed sales manager. Mr. Ward has been with the Canada Paint Co. for about fifteen years, and his thorough knowledge of the business and conditions in Eastern Canada, will assist him greatly in looking after the sales end of the business in the East. Mr. Ward has also spent some time on the road, having worked up considerable business in the city of Montreal.

CHANGES IN REMINGTON ORGANIZATION

The Remington Arms Company announce that in the last two years they have had such a large increase in business and the company has had to meet such unprecedented conditions that there have necessarily been changes in the organization and additional men have had to be brought in to meet the new demands.

A managing committee has recently been appointed consisting of Samuel F. Pryor, G. M. P. Murphy, James H. Perkins and W. E. S. Griswold. Mr. Pryor, who has been President of the Company, has been elected Chairman of the Managing Committee and Henry S. Kimball, formerly President of the American Zinc, Lead and Smelting Company, has been elected President of the Company. C. S. Hawley, formerly President of the Laconia Car Company, has become associated with the company in the capacity of treasurer. With these additional men and with the managing committee working in thorough co-operation with the executive offices, the problem of handling the great volume of business has been successfully met. With these increases in the executive organization and with certain adjustments in existing contracts, it is now considered that the affairs of the company are in a very satisfactory condition.

ANOTHER MERCHANT ADOPTS CASH SYSTEM

Listowel merchant advises customers that cash system goes into effect Jan. 1.

S. L. Adolph, hardware merchant, Listowel, Ont., has decided to adopt the cash system, and this week sent out 1,000 circular letters advising customers that he will sell for cash only, after Jan. 1. with the exception of schools, churches, and manufacturers. Mr. Adolph's letter to customers reads as follows:—

Listowel, Ont., Dec. 18, 1916.

TERMS CASH

Dear Sir,—

I find it necessary to announce to my friends and the public generally, that on and after January 1st, 1917, I purpose conducting my business, both buying and selling, on the CASH PLAN.

A long experience in the hardware business has convinced me that the system of selling on credit is an unfair one.

In times of close competition, cash buyers are entitled to the very lowest prices and should not be required to pay the losses incident to a credit business.

I shall always endeavor to carry a well assorted stock of shelf and heavy hardware, which will be sold at the very lowest CASH PRICES.

I may further mention that it is just and reasonable to open monthly accounts with the schools, churches, contractors and manufacturers. All these accounts will be rendered and payable monthly.

Hoping to meet with the continuance of your patronage, which I have very much appreciated in the past, I am

Yours truly,

S. L. ADOLPH."

Christmas Window Contest

FOR *many years past it has been customary for* HARDWARE AND METAL *to conduct a Christmas window display contest each year. The contest has become an event of wide interest for all Canadian retail hardwaremen interested in window trimming, and each succeeding competiton has been keener and each year has seen a wider and more representative response culminating in the big success of last year.*

In accordance with past custom, two contests will be conducted this year—one for stores in places under 5,000 population, the other for places of 5,000 and over. No restrictions will be set on the style of display or the goods used in the arrangement, except that each window must be arranged with goods for the Christmas trade. Description should accompany each display.

Eight prizes will be offered as follows:—

PLACES OF 5,000 AND OVER		PLACES UNDER 5,000	
First Prize	$10.00	First Prize	$10.00
Second Prize	5.00	Second Prize	5.00
Third Prize	3.00	Third Prize	3.00
Fourth Prize	2.00	Fourth Prize	2.00

Contestants will note that an equal number of prizes are offered to the small town window trimmer as to those in the larger towns and cities.

The contest closes on Monday, Jan. 1. No photos received after that date will be entered unless there is proof that they have been delayed in transit.

All matter should be addressed to "The Editor, HARDWARE AND METAL, *143-153 University Avenue, Toronto," and marked "For Christmas window contest."*

WHAT OTHER PAPERS SAY

THAT PRICE-FIXING SCHEME

From *New York Journal of Commerce.*

The advocates of the plan for legalizing prices of trade-marked articles fixed by those who produce them, and making it unlawful for wholesale or retail dealers to cut those prices, are said to be prepared to maintain a powerful lobbying force at Washington to put it through to enactment at the coming short session of Congress. That alone ought to be enough to discredit it as a thing devised for private profit and not in the benefit of the public, because it cannot get the support of public sentiment. It is in effect a corrupt method of trying to secure legislation for private advantage.

It is easy to get a registered trade-mark for almost any product with a distinctive character. If it has merit justified by its quality, it ought to depend upon that for success in retail markets and with the consuming public. The manufacturer is free to fix the price at which he will sell his product and refuse to supply it to the general trade for any less. The wholesale dealer who takes it may agree to sell it at a prescribed price, though it be an agreement which cannot be legally enforced. The purpose of the bill is to prohibit any reduction of price not only by him, but by any retailer who purchases from him. It is intended virtually to prevent any competition in the sale of such articles by varying prices, thereby giving absolute control of the market to the original maker on what he regards as the most profitable basis for himself.

The chief claim for this as a legal right is based upon a practice sometimes resorted to with some articles of superior merit or popular reputation, of advertising a reduction in the price to attract customers and secure their patronage for other goods. This is assumed to be damaging to the sale of the trade-marked article. There is little evidence that this practice is carried to any injurious extent with regard to articles of real merit, and certainly no adequate reason has been presented why the right of dealers in goods which they buy and pay for should not be free to fix the price at which they will sell them, according to the requirements of their own business. The coming session of Congress will be a short and busy one and no special favor should be shown to a monopolizing "interest" in particular lines of trade.

THE RIGHT TO PROFIT

From *Canadian Grocer.*

A certain gentleman of the name of Jan Wetz has gained an unenviable notoriety in the United States recently, owing to the fact that he owns 72,000,000 eggs. Jan not only has the eggs but he intends to profit thereby. Last year he claims he also had eggs, and the public genially allowed him to take an enormous loss. Perhaps not quite unnaturally, Jan holds that if a man bears his losses without whining he should be allowed to pocket his winnings without complaint.

The gist of the thing is: what right has a man to profit on his greater foresight, or greater business acumen?

No man in business is above profiting on an increase in the price of goods. One large mail order house in Canada is reported to have bought enough goods to carry it over the next two years, which are expected to be years of scarcity. They intend to profit by their outlay. There are no complaints about this. Yet how does it differ from the case of Jan Wetz? If a man has the right to buy and the right to accept the possibility of loss, he should also be allowed the right to profit. To deny a man this right would be to turn back the wheels of business many centuries.

What then is the answer? We don't favor Jan Wetz. His very name is an offence to us, and his actions bear out his name. All the same there is a something to be said for his side of the case. Unless men have foresight enough to gather for profit, we will be buying eggs for three months of the year for next to nothing, and forgetting what an egg looks like for the balance of the year.

There must be some remedy. It is evident that a man cannot be allowed to gamble without a limit in the necessities of life. It is also true that to refuse to let him gamble at all would have a disastrous effect on business. There evidently must be some measure of control, but the control must serve both parties. If a man is to be prevented from making all the profit possible, it is also necessary that he should be protected against exorbitant loss.

THE STEEL TRADE AND PEACE OVERTURES

From *American Metal Market.*

The chief point, as to the iron and steel trade, with respect to the German peace overture, news of which was generally disseminated in the trade Tuesday morning, is not with respect to the possibility of this overture leading continuously over the path which eventually will bring peace, for that possibility is naturally an extremely small one. The chief point will be found to be that it causes a general awakening to the fact that at some time peace really will come. The iron and steel market had been acting as if such a contingency were too remote to be considered. The market has been too excited, indeed, to consider anything very seriously. Now everyone has been suddenly made to realize that the end of the war is something to be taken definitely into account in all calculations. The possibility of peace coming as a result of this particular overture is very small. The change in the mental attitude is positive and will be permanent. This particular overture may be forgotten in a week or two. The impression it has made, the creation of a new viewpoint and the instilling of a measure of caution, will be permanent.

It is very well indeed for the iron and steel trade that this incident has occurred. Something of that nature was needed. Steel prices had been advancing too rapidly, for they have been advancing in recent years as rapidly as they advanced at any previous time, and there certainly is nothing safe in a market that does not advance more and more slowly as it goes up, for there is necessarily an impossible level somewhere and it stands to reason the market should swerve away in an effort to avoid it, rather than head directly for it. The pig iron market also, starting with its modest advances late in August, had been advancing more and more sharply, and it needed a check. We are registering here no objection to the pig iron market advancing, but it is certain that it ought not to advance first by 25-cent increments, then by $1 increments, then by $2 increments, and so forth. That is not the way for a market to seek its proper level.

Even if peace talk should proceed much farther than it has to date, there is no occasion at present or in the near future for any iron and steel commodities to recede from price levels they have really attained. At best it would require a very long time for peace to be made. Even an armistice during the early stages of negotiations would be quite improbable and even an armistice could not possibly involve a stoppage at the munition factories. Besides this consideration it must be observed that the American steel trade is 25 per cent. export and 75 per cent. domestic, and the domestic consumers have their engagements, not to be suddenly broken or postponed. Prices should not recede from levels actually attained, but there could be recessions from prices the market merely had the superficial appearance of having been reached.

TRIPLE-PRICED STEEL PRODUCTS

From *American Metal Market,* New York.

Last March and April a somewhat interesting pastime was to compile a list of the steel products which had doubled in price. On April 17th we printed such a list comprising 13 such products, including billets, wire rods, skelp, iron bars, steel bars, hoops, plates, shapes, blue annealed sheets, railroad spikes, structural rivets, shafting and cold rolled strip.

Now we can start a list of triple-priced steel products. The list is short now, but it may grow. It now stands as follows:

Sheet bars	$19.00 to $57.00
Plates	1.05c to 3.50c
Structural rivets	1.35c to 4.15c

The former comparison, like the above, was based on prices for commodities to be delivered at mill convenience. If prices for prompt shipment were considered, the list would be larger. When the market was at its lowest, in December, 1914, the prompt deliveries were quoted lower than the forward. Using prompt prices for comparison, triple-priced steel products would include steel bars, structural shapes and shafting.

These comparisons are another way of asking, "When will it end?" Traditionally steel is a commodity which sells well only as long as the price is not too high. Precedents have been forgotten, but there are certain circumstances that do not change. A part of the steel that is made goes normally into permanent construction, such as is calculated to earn a profit over a period of years, often quite a number of years. The total demand for steel can be maintained only by the special demand, that cannot be deferred, increasing enough to make up for the decreased demand for steel for permanent investment. Already much consumption of steel has been postponed, and of course more will be. If price advances continue the breaking point will eventually be reached. Conditions are different in degree not in kind.

Such an outlook is extremely gratifying to steel producers, then ordinarily it is not. In the ordinary steel price movements, the sellers are fearful of prices going too high, so as to shut off buying, because they know that a readjustment must come and that takes time. It is better to continue to sell at moderate prices. In this case, however, everyone knows that a readjustment must come, at the close of the war or sooner, and so as it must come in any event the present advances are countenanced. Demand for steel must bank up to the extent that purchases are deferred on account of high prices. It has always been very difficult for such banked-up demand to express itself in a declining market, and those who think it will be easy this time may find themselves mistaken, but it must be expressed eventually.

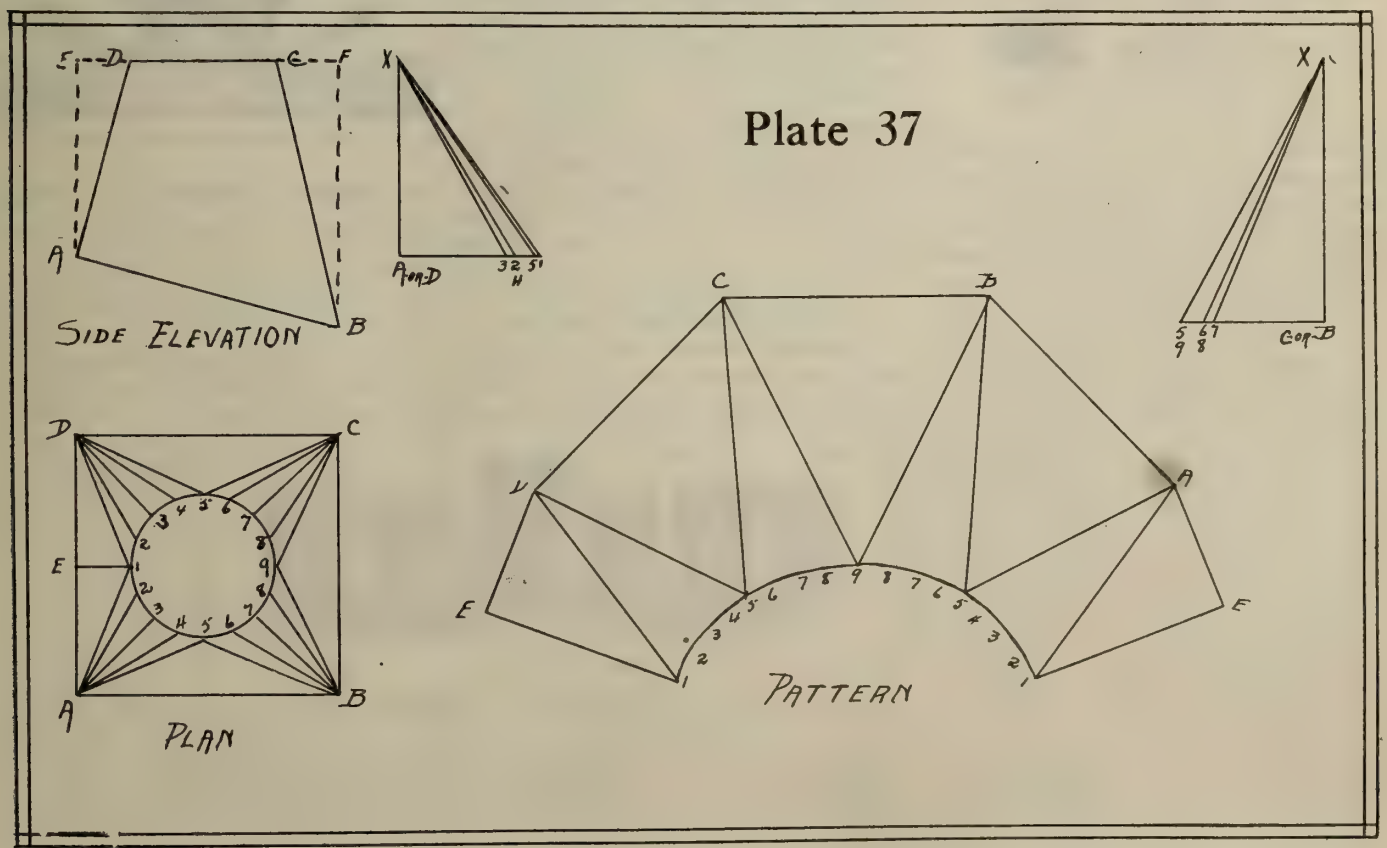
PRACTICAL SHEET-METAL WORK

THREE PIECE ELBOW WITH GUSSET OR GORE PIECE.

BY THOMAS STANFIELD

IN this issue is shown a flared article, round at top, square at bottom, but with the base at an angle to the top, as shown in side elevation.

Draw plan as shown by A B C D, placing plan of top in centre, as shown by circle. Divide the plan of top into four sections, having the diameter drawn from the division parallel to the sides of base as described at 1 9 to A B. From each of these points draw lines to corner (see A B C D). From each of the divisions in the circle draw lines to the nearest corner, as between 1 5 to A and 5 9 to C, repeating same on the other two sections. The lines thus obtained form the bases of angles; the height of the angles at A and D is the straight height on elevation. From A to D, as shown by line E A, with E D as an altitude, and the different points A 1 to A 5 as bases form the angles shown at X A 1, thus obtaining the points X 1, X 2, etc., to X 5. The height of angles at B and C is equal to straight height between B C on elevation, as shown by B F, with B F as altitude and the points B 5 to B 9 as bases, form the angles shown at X B 5.



To lay out pattern, draw a line equal to D A on elevation, as shown by E 1. With E as a centre and E A of plan as a radius, then draw an arc. And with X 1 at angle A as radius and point 1 of pattern as a centre draw an arc intersecting the one drawn from E, thus obtaining paint A.

With point A as a centre and the different points X 2, X 3, X 4, and X 5 at angles A as radii draws arcs intersecting each, as drawn with arc drawn from last point obtained, as from point 1, to obtain point 2, 2 to 3, etc., the radius of the arc being one division of circle in plan. When point 5 is obtained, draw lines joining A 5, with A as a centre and A B on elevation. As a radius, note that A B on elevation shows correct length A B, but on plan it does not; draw an arc. With X 5 at angles at B as a radius and point 5 as a centre draw an arc intersecting the one drawn from A obtaining point B.

Now draw lines, joining A B and B 5 With B as a centre and the different points, X 5, X 7, X 8, X 9, as radii, draw arcs intersecting each as drawn, with arc drawn from last obtained point, the radius being equal to one division of circle in plan. When point 9 is obtained, draw a line joining B 9 with B as a centre, and B C on plan as a radius draw an arc. With X 9 at B as a radius and point 9 on pattern as a centre, draw an arc intersecting the one drawn from B, thus obtaining point C.

Next draw lines joining B C and C 9, with C on pattern as a centre and the different points, X 9, X 8, X 7, X 6, and X 5, as radii. Then draw arcs intersecting each as drawn, with arc drawn from last obtained point, this arc having a radius equal to one division in circle on plan. When point 5 is obtained, draw a line joining 5 C, with point C as a centre, and B A on elevation as a radius, draw an arc; with X 5 at angle A as a radius, draw an arc intersecting one drawn from C, obtaining point D; then draw lines joining C D and D 5. With

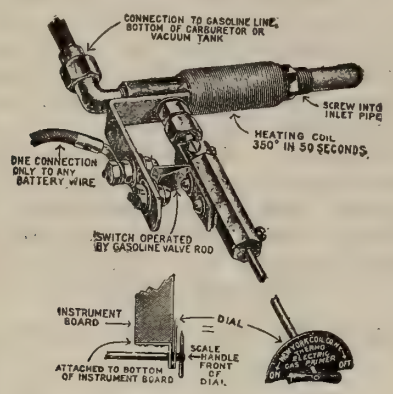
NEW HARDWARE GOODS



OFFERED TO CANADIAN HARDWAREMEN

THERMO ELECTRIC GAS PRIMER

The New York Coil Company, 338 Pearl street, New York city, announce their Thermo Electric Gas Primer, which is a device that screws into the inlet manifold and, it is said, delivers heated gasoline vapor and boiling hot liquid gasoline to all cylinders.

The makers claim it will cause the coldest engine to start on the first few revolutions of the motor, greatly conserving the energy of the starting battery, which very frequently is made to suffer, due to the extreme difficulty of starting in cold weather.

The instrument consists of a brass chamber over which is wound a heating unit that is connected through a switch

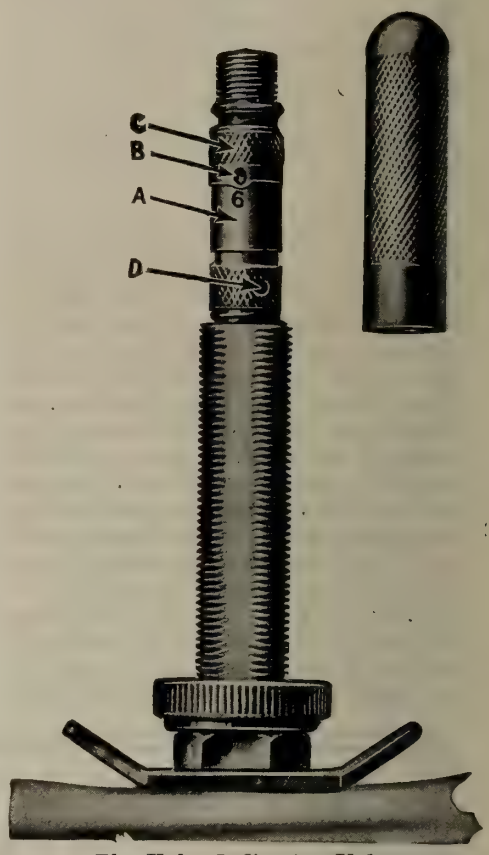
Thermo Electric-Gas Primer.

to the nearest battery wire. A slight turn of the rod which is run up to the instrument board establishes an electrical connection which heats the brass chamber to a temperature from 300 to 500 degrees, in about one minute's time. A slight further turning of the rod opens a needle valve, at which time the starter pedal is depressed, the vacuum in manifold draws gasoline through a pipe connection attached to bottom of vacuum tank, pet cock underneath carburetor, or the gasoline line directly to the interior of the heated chamber, where it is instantly converted into the most explosive vapor. The needle valve is left in this position for several minutes, allowing the engine to receive an extra rich mixture of heated gasoline, which, it is said, quickly brings the motor to the proper temperature, entirely independent of the action of the carburetor.

The makers claim there is no filling or attention required, or pumping fuel to the device, as in other primers. The device is exceptionally well made, and is supplied with tubing and wiring for connections, together with lucid instructions.

NEW ARMSTRONG TUBES

A new Armstrong automobile inner tube is offered to the trade by the Armstrong Rubber Co., Inc., 118-122 Adams street, Newark, N.J. One of the main features of the new tube is its equipment with a "Kahn" indicator valve by which it is said the air pressure in the tube can be ascertained at all times. The tire is made of heavy pure gum rubber. The valve can be set for the pressure desired in the tire, and when the pressure is reached, the main valve automatically closes and the remaining air exhausts through a by passage until the source of supply is disconnected. Reference to the accompanying illustration shows that the collar marked A. has five slots, marked respectively 5, 6, 7, 8 and 9, at each of which the projection B on the collar C can be set by a slight turn of the latter. For instance, if it is desired to keep 80 lb. pressure in the tire, the collar C is simply turned until the projection B fits into the slot on collar A marked 8. Then when the tire is pumped to 80 lb. pressure it is impossible to put more air into it.



The excess air in escaping after the desired pressure is reached passes through a small hole in the side of the valve, marked D, making a whistling sound and acting as an alarm, warning the operator to cut off the source of supply.

ALUMINUM TESTED CUPS

American Aluminum Ware Co., 374-380 Jelliff avenue, Newark, N.J., is marketing the aluminum tested cup set No. 52. The set consists of 5 cups in a case, measuring 2½ in. at the top, by 3½ in. deep, cups 2¼ in. x 2¾ in. deep. The makers state that the set of cups makes a practical and useful set for tourists, autoists, and picnickers.

Nested Cup Set.

The Kahn Indicating Valve.

PRACTICAL SHEET METAL WORK

(Continued from page 53.)

D as a centre, and the different points, X 5, X 4, X 3, X 2, and X 1, as radii, draw arcs intersecting each as drawn with arc drawn from last obtained points the radius of this arc being one division of circle on plan. When point 1 is obtained, draw a line joining D 1. With D as a centre and D E on plan as a radius, draw an arc. With point 1 as a centre and A D of elevation as a radius, draw an arc intersecting the one drawn from D, obtaining point E. Draw lines joining D E and E 1, thus completing outline of pattern as 1, E, D C, B A 1.

WEEKLY PAINT DEPARTMENT

Handling Ruffled Customers

Can the Business of Average Size Every Time Live Up—Literally—to That Famous Declaration: "the Customer is Always Right

AN article which recently appeared in *"System,"* the Magazine of Business, entitled "Handling Ruffled Customers," contains so many truths regarding the subject that it is here reprinted for the benefit of salesmen. It will interest all clerks who are called upon to serve customers in the paint department. The article does not specifically deal with paint, but many of the types of customers referred to are not by any means unknown to the clerks in hardware stores. The article, written by Russell Wilmot, follows:—

No matter what kind or size a man's business may be, he will doubtless have his quota of dissatisfied customers. The best he can hope to do is to hold it down to a minimum. Only a business which is in a position to create new customers more rapidly than it loses old ones can usually afford to have any at all.

Many merchants believe that an appeased customer isn't so valuable an asset to their stores as one who has never been provoked. It doesn't take much of a disappointment, they hold, to drive a customer to a competitor. The customer, to begin with, expects fair treatment and courtesy. He has, they believe, a right to expect them.

It is the occasional unreasonable customer, whose demands on the merchant are unfair to him and to his business, who really calls for the most careful consideration and who is likely to do the greatest amount of harm.

The point at which the unfair customer and the fair merchant can get together is often narrow and calls for great tact from those in charge of complaints. Perhaps, as a matter of fact, the stores suffer losses too often, rather than permit customers to leave in anger.

What Policy Can You Afford to Follow In Satisfying Customers Who Complain?

This brings up the question: Can a business man with an average sized store live up—literally—to that famous declaration of a merchant with a very big store: "The customer is always right"? Many think that there is such a thing as going too far in yielding to customers' requests regardless of their demands. Merchants' associations in several cities are restricting the privileges extended to customers by their members.

Yet it is of course true that often the customer may have just cause for complaint. And then it surely becomes the duty of the store to give every possible adjustment, for otherwise it is likely to suffer to a far greater degree than the customer. So it is important to locate the causes for justified complaints and to stamp them out.

One of these causes, and often an important one, may arise from the danger that advertising departments sometimes unintentionally misrepresent goods. Especially is this true where many of the customers involved are women.

Women are the chief readers of certain types of retail advertising copy. Many of them are drawn to their shopping trips by what the advertisements say, as well as by their faith in the integrity of their favorite stores. It would, therefore, seem logical that the primary aim of retail advertising within this field, next to an endeavor to create an immediate demand for the goods advertised, should be to gradually build up confidence, and thereby to attract steady purchases by always being able to make the goods square with their claims.

Even occasional misstatements in retail advertising copy of this type are likely to minimize the general good effects of an otherwise effective campaign by dissatisfying customers. One disgruntled woman customer who believes she has been misled may mean from one to ten centres of ill will.

Many successful stores, big and little, find it worth while to make a careful study of feminine temperament, not only as a step to winning new trade, but as a means of holding the old through minimizing the number of "kickers," as a result of the attitude taken by their advertising copy.

Here is an example in point. Altman's, one of the biggest department stores dealing with a high class of retail trade, gives close attention to this problem. Its method is simple. Each morning the buyers gather in a big room on an upper floor and consult with the advertising director. The buyers and the advertising man compare notes and make certain, through free discussion, that the merchandise fits all the statements to be made for it in the newspapers.

It is often difficult to tell whether or not living up to "the customer is always right" is sound—but the results of misjudgment are so severe, frequently, that many able merchandise men believe it wise always to yield to the customer's request if the amount involved is not too large.

Here is a case where misjudgment lost trade. A large and expensive Sunday advertisement in a Boston paper told of wonderful values in feathers and tips. For a year a certain woman had been looking forward to buying three short, graceful, heavy-headed feathers. Here was her chance.

Early Monday morning, therefore, she hurried into the shopping district and secured the feathers. She paid rather more than she had expected, but got exactly what she wanted. She carried the feathers to her milliner and had them placed upon a hat for an afternoon at a long anticipated symphony concert. When she left the concert, she found rain falling in torrents.

The graceful, curling feathers were soon draggled and straightened. Knowing, however, that they could be curled again at slight expense within a day or so, this woman took them to be re-curled to the very store at which she had purchased them. Two days later she called for them and was handed three over-curled, partly worn, wooly-fibred feathers.

"These are not mine," the woman declared. "You have made a mistake."

"We never make a mistake," the saleswoman replied, a bit haughtily.

"But they are not mine!" the woman protested. "Mine were just new—last Monday. They were much heavier and glossier fibred."

In vain she appealed to the floor manager and at the complaint office. The saleswoman declared that there had been no other black feathers in the repair room, the floor man was tolerantly incredulous, and the girl who had made the sale in Monday's rush could not be located.

The floor man pointed out to the com-

plaint man—sotto voice—that any one with half an eye could see that the feathers were half worn out and had been cheap ones in the first place. The woman heard him, agreed with him, and explained afresh that hers were handsome new ones. She was told coldly that nothing could be done about it, and—with tears dangerously near the surface—she departed. She had been subjected to injustice and branded as guilty of attempting a flagrant piece of dishonesty by the employees of one of the largest firms in the country. She was helpless, and yet she was right.

Then there is a source of complaints originating with a carelessly trained sales force. There are means available at small expense for the average sized store which wants to instruct its sales force about what it sells. The large store can afford to use more elaborate means of its own creation to reach the same end. Therefore, there is apparently little excuse for a sales force with a soggy knowledge of what it is selling.

But, nevertheless, many a sales force is soggy in this respect.

Here follow two incidents hinging on the poor training given members of retail sales forces. A woman who does much traveling found herself in Pittsburgh with two hours to spare. She decided to do some shopping and sought out one of the big stores.

The first item on her list was wash belting. She approached a counter that looked as if it might be able to supply this want. She was treated with indifference by the salesgirl, informed that this particular counter didn't carry wash belting and left to seek further without help.

This woman went from counter to counter without being able to get suitable satisfaction or guidance in her quest for a very simple article. Finally, as she was about to leave, greatly provoked, she passed the first counter again and appealed to the indifferent salesgirl once more.

"I am quite sure that you have what I want," she said. "In fact, this belting here is exactly what I want."

"Sure, we have that," said the salesgirl, "but you asked for wash belting. What you have selected we call 'finished Hamburg inserting.'"

Here a customer was dissatisfied either through poor training or lax management. This salesgirl wilfully permitted a customer to slip through her hands by not finding out just what she wanted in the first place and making some endeavor to either suit her or to see that she got to the right counter.

Lack of tact is, of course, a prime cause of complaints—often unexpressed ones. Here is a fairly specific illustration of this.

Many winter residents in California do light housekeeping. The neighborhood delicatessen stores therefore enjoy a thriving business.

A woman and a man stood before the counter of such a store in Pasadena. The man was leisurely surveying the offerings. The woman decided to make a purchase from some chicken tamales that were heaped on a platter on top of the counter.

Selecting four plump ones without waiting for wrapping paper, she dropped them into a bag she carried and handed the clerk a bill, with the request that it be sent up in the cash carrier for her change immediately, as she was in a hurry. The man standing by her side waiting to purchase, with unpardonable rudeness thereupon turned to the woman with the remark: "Nowadays women are always butting in everywhere. I wish I might go where a woman would never be seen."

The woman retorted: "The sooner you go to that place the better off society is likely to be. It will be totally unnecessary to delay your departure on account of possible tears shed over losing you."

This Salesman Might Have Saved His Store Two Customers

The attack and the retort were both regrettable. They sprang from one of those flashes of crude human nature which at times break through the veneer. There was a moment's uncomfortable silence.

The clerk grinned delightedly, and in the tension of waiting for further developments forgot to send for the requested change. The woman replaced the tamales and picked up her money. Next both customers walked out of the store—probably never to return. Had the clerk used average tact and perhaps remarked gently: "Pardon, but I have ample time for both," an unpleasant situation might have been avoided and wrath turned away by soft words. While procedure in attending to customers is right and proper, tact in handling a threatened "collision" should be part of the training of every salesman.

I once knew a clothier—let's call him Bill Taylor—who opened up in a small way in a western college town. Some of his experiences indicate how tact can anticipate and smother complaints and dissatisfaction. His field was pretty well covered by three large competitors to start with. In a recent conversation he dated his success from the day his three competitors came down and looked in his window, laughed, and went away saying he couldn't last a month out. That made everybody curious to drop in and see what this foolhardy merchant looked like.

This unique introduction furnished by his competitors may have helped, but his success actually dated from the day his personality was let loose in that town, and a good personality is usually a sort of general antidote for complaints. His methods were as effective as they were original. The way he went after that fall college trade was an eye opener. Well, within the time that had been given him to "bust" the students had discovered his store and the fact that it was there for them; in truth, it was. It was their store, and Bill never let them forget it.

I have seen a couple of freshmen come in and one step behind the counter and sell his classmate three shirts. He even made out the sales slip and wrapped the purchase. Bill watched the whole proceeding from across the store with an indulgent smile.

Another Method of Handling This Customer Might Have Made Him Dissatisfied

One day a member of the college faculty dropped in to purchase a pair of shoes. Bill motioned the clerk to stand back; he knew his man and wanted a clear field. He talked with the customer for several minutes before he even went to the shoe cases. Then he brought out just one pair of heavy, tan street shoes. The professor slipped his feet into them, then fidgeted about nervously.

"Better show me another pair," he suggested.

"You don't want to buy but one pair, do you, Professor Graham?" It wasn't really a question, but rather a statement of fact in a studied, soothing drawl. "I can't show you a more stylish, serviceable shoe for this sloppy weather. And see how well it fits you."

After the nervous professor had departed with the purchase, I asked Bill if he made a practice of taking things into his own hands that way. "Oh, my, no!" He spoke emphatically. "But I know that man, and he invariably gets every shoe in the house that could possibly fit him piled up around him for inspection. Then he gets fidgety and nervous, and this attitude is unconsciously reflected by the salesman. The merits of the various lasts and leathers add to the professor's confusion, and he finally goes out undecided, and perhaps just a little bit dissatisfied without really knowing why. I stave off the possibility of a complaint by handling him myself with just a little extra tact."

Just as an example of Bill's ability to forestall complaints with tact, I'll cite another instance that came under my observation. A rather fastidiously dressed young man came in hastily and asked for a particular collar which had just been placed on the market.

"I'm sorry," said Bill, "I haven't a Potomac in stock in your size to-day, Mr. Hill, but I'll have plenty here by Thursday. That's only day after to-

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Dec. 20.—There has been a holiday lull in paint market activities this week. Following the rise in white lead in oil, the market has been without sensational movement in any respect. This week finds turpentine still firmer, and the lower quotations of last week are wiped out by the steady movement of the market upwards in price. There is a rumored curtailment of supply as regards turpentine, and demand has been quite brisk. Expectations of an increase in prices of dry lead have not materialised this week, but there may be some movement towards greater firmness in this metal after the New Year. Putty is steady following last week's increase. Glass is up in price, and is in fact the principal commodity used in the trade that shows an advance this week. Gasoline is steady at last week's quotations which showed an advance over the previous week.

Plate Glass Shows A Five Per Cent. Rise

GLASS.—For some time past, as readers of HARDWARE AND METAL are aware, there has been a tendency to firmness and rising prices in glass. This week an increase of five per cent. on all lines of window and plate glass is recorded. In the hardware trade the rise takes the form of a change in discount from the former 15 per cent. and 5, to 10 and 5. The change is due to the shortage of labor and difficulties of manufacture in the United States from where the main glass supplies of Canada are imported. Incidentally it may be noted that Canadian made glass (used in the manufacture of bottles chiefly) increased this week also as regards the glass for druggists bottles.

White Lead in Oil Rests on its Record

WHITE LEAD IN OIL.—Holding the proud position of having attained the highest price in the history of its use in Canada, white lead in oil is content this week to rest on its reputation, and remain dormant awaiting the course of events. Demand for the product has been normal, and apparently unchecked by the increase in price of last week. The usual holiday slackness seems to pervade market conditions for this as for other paint products at present, but the turn of the New Year may find general tendencies resumed towards firmness. The market for the metal was reported a trifle easier during the week. The oil was unchanged from last week's conditions.

Linseed Oil Quiet; Prices Are Steady

LINSEED OIL.—Flax seed was considerably firmer priced at the middle of this week than it was at the same period last week, the quotations being $2.58½ cents per bushel. Linseed oil was only slightly influenced however, and prices from crusher to wholesaler showed but slight shadings towards firmness. The market seemed to some opinions even weaker for the oil as compared with the tendencies of the beginning of the week, and prices from wholesaler to retailer were not altered at all from last week's quotations which show a fairly wide range as follows:

Linseed Oil	Raw	Boiled
1 to 4 barrels ..	$1.12-1.20	$1.15-1.25
5 to 9 barrels ..	1.11-1.19	1.14-1.24
10 to 25 barrels	1.10-1.18	1.13-1.23

Turpentine Keeps Up Its Firmness

TURPENTINE.—The tendency towards firmness in turpentine which was expressed decidedly last week in an advance of two cents per gallon, became still more marked this week, and the advance on the lower quotations of last week, became a decided levelling up influence, bringing the market to a fairly general 80 cent figure for turpentine in one barrel lots. Firms quoting 78 cents to good customers might be found, but the prevailing price was around the 80 cent figure for all deliveries of less than a couple of barrels, and for smaller quantities correspondingly firmer prices were quoted. Reports from Savannah seemed to suggest further firmness due to insufficient supplies according to some market views, other opinions attribute the rising tendency to local demand's being rather brisker, and spot stocks more appreciated accordingly. Prices ruling on the market are as follows:

Turpentine	Per Imp. Gal.
1 barrel lots	80 cents
2 to 4 barrels	79 cents
5 to 10 barrels	78 cents

Mixed Paints Prove Steadily in Demand

MIXED PAINTS. — Demand for mixed paints has been exceedingly good for the time of year, say all manufacturers without exception, and the crushers reports regarding demand for linseed oil by the manufactures bear out the idea that manufacturers have been filling orders rapidly. Travellers are mostly all in now for the holiday, and a sound based feeling of substantially good market conditions for mixed paints prevails. There is every indication that even at enhanced prices mixed paints will be in wholesome demand for spring business throughout the opening weeks of the coming year, and since prospects are still towards firmness, and the public (including the paint consuming public) are getting used to the higher levels of prices, good business in paints is looked for, and justified by orders coming in from the country. During the holidays there will be a slight lull in business—a breathing spell after a strenuous Fall (in which there were several rises.)

TORONTO

TORONTO, Dec. 22.—Business in paint lines has been quiet during the week with the jobbing houses. Travellers have not been making their calls and business has been more of a sorting-up nature. Travellers for some of the large paint concerns are on the road, however, and are busy taking spring bookings. Business in this line for future delivery is reported good. White lead in oil is holding firm at the advance recorded last week. Some jobbers have pointed out that the advance was not commensurate with the advance that has recently taken place in the price of the pig lead. Linseed oil is holding steady in the face of an erratic market in the flaxseed. Turpentine continues firm and in certain quarters has been marked up in price. Gasoline is holding firm in the face of another advance in the Mid-Continent crude oil. Varnish has not yet been marked up by most of the houses,

"BETTER BRUSHES"

AND JUST

"BRUSHES"

ARE YOU, AS A PROGRESSIVE, WIDE-AWAKE DEALER, CONTENT TO OFFER YOUR TRADE JUST "BRUSHES" OR DO YOU IMMEDIATELY SEE THAT YOUR BUSINESS INTERESTS ARE BEST SERVED BY SUPPLYING

"BETTER BRUSHES"

THAN YOUR LESS PROGRESSIVE COMPETITOR FEELS IS REQUIRED?

ARE YOU LIKE THE WOMAN WHO, AFTER BUYING A CAN OF VARNISH, WAS ASKED IF SHE DID NOT WANT A BRUSH TO APPLY IT, SAID: "NO! DON'T NEED IT, I CAN PUT IT ON WITH A RAG," OR DO YOU KNOW THAT TO SELL A HIGH QUALITY PAINT OR VARNISH WITH AN INFERIOR BRUSH TO APPLY IT IS NOTHING SHORT OF A

COMMERCIAL CRIME?

DO YOU KNOW THAT THE COVERING CAPACITY OF GOOD PAINT IS INCREASED, IN MOST CASES, OVER 20% BY USING

"BETTER BRUSHES"

TO APPLY IT?

DO YOU KNOW THAT PAINT APPLIED WITH THESE

"BETTER BRUSHES"

IS DISTRIBUTED MORE EVENLY AND, BEING FORCED INTO THE GRAIN OF THE MATERIAL TO WHICH IT IS APPLIED, CLINGS TIGHTER AND WEARS LONGER THAN WHEN JUST "BRUSHES" ARE USED?

DO YOU KNOW THAT

"BETTER BRUSHES"

ARE MADE ONLY BY

T. S. SIMMS & CO., Limited

ST. JOHN, N.B.

AND THAT THEY ARE GOING TO TALK TO YOU THROUGH THIS MAGAZINE UNTIL THEY CONVINCE YOU THAT JUST "BRUSHES" ARE NOT

"BETTER BRUSHES"

ANY MORE THAN TIN WHISTLES ARE CANARY BIRDS?

IN the battery of melting kettles shown above we make 11,500 gallons of varnish at a single batch, and our storage tanks contain one and a half million gallons of varnish ready to ship.

These exceptionally large facilities for manufacturing and storage enable us to ensure ripe and uniform varnish at all times.

All varnishes, enamels, etc. made by Berry Brothers are staples of the painter's supply trade. They are safe to recommend and easy to sell because the label is recognized by consumers as a guarantee of quality.

Write for price list and interesting dealers' proposition.

although some are now quoting at the highest price that recently went into effect. Putty is holding firm at the advance recorded last week. All glue prices are merely nominal. There is a big demand and consumers are willing to pay a premium on quotations in certain instances in order to take care of their trade. Glass has not yet advanced locally but dealers assert it will undoubtedly have to be marked up in the near future.

Linseed Oil Holds In Erratic Market

LINSEED OIL.—The net difference in the flaxseed market during the week has been in an upward direction to the extent of 3c. per bushel. On Wednesday of last week flax closed for the December option at $2.53 and on Wednesday of the present week the price was $2.56. During the week, however, it went as high as $2.58¾ for December option and as low as $2.50 on Friday of last week. From this it will be seen that the seed market is in an erratic condition. Linseed oil has held steady in price during the week as a result and the range of quotations is practically the same as last week, the low range being $1.08 for raw linseed oil and quite generally $1.15 for the higher range. In one instance, however, the price was quoted as high as $1.19 for the raw. There has been a good demand for oil cake and prices in this commodity have firmed up considerably in certain quarters, the range being from $50 to $54 per ton. Oil men were expecting the recent move of President Wilson toward drawing out peace terms to have a weakening effect in the market, but at the opening of the market on Thursday this apparently had no effect as opening quotations for flaxseed were higher than the previous day.

	Raw.	Boiled.
1 to 2 barrels..	$1.08-$1.19	$1.10½-$1.22
3 to 5 barrels..	1.07- 1.18	1.09½- 1.21
6 to 9 barrels..	1.06- 1.17	1.08½- 1.20

Crude Oil Advances; Gasoline Again Firm

GASOLINE.—The market for gasoline held steady and in a firm condition during the week. Another advance of 10c. per barrel in the price of Mid-Continent crude oil now makes the selling price for that commodity $1.20 per barrel. This again puts gasoline in a firm position, together with all other oils. Coal oil is also in firm market, together with all lubricating oils such as cylinder, automobile, black oil and machine oil. Gasoline is quoted at 27½c. to 28c. on a bulk basis, with benzine 1c. under. Further advances in the various oil products would not come as a surprise.

Lower Quotations On Turpentine Up

TURPENTINE.—There was a steadiness quite generally in the local market for turpentine during the week, with the concerns quoting the lowest prices last week recording an advance of 2c. The range of prices is no wfrom 75c. to 82c. There was a slightly easier tendency in the primary market during the first part of the present week when the price was quoted down 1c. per gallon from the high closing point of Saturday last. Demand for turpentine locally has been rather poor during the week. Following are the quotations:—

	Per Imp. Gal.
1-barrel lots	$0.75-$0.82
2 to 5 barrels	0.74- 0.81
6 to 9 barrels	0.73- 0.80
5-gallon	0.80- 0.89

Glass Market in Hesitant Condition

GLASS.—There is a continued firmness in the price of glass with higher prices in the near future almost inevitable. Although recent heavy advances have taken place in the United States the local dealers have not yet taken the initiative to increase prices. Dealers assert that glass in the primary market to-day would cost but a few cents less per case than it is being sold at to the retail trade at the present time in Canada. Some stocks are still on hand and until these are exhausted there will probably be no concerted move to mark prices upward. It is asserted that it is practically certain that higher prices will have to go into effect some time early in the New Year.

HANDLING RUFFLED CUSTOMERS

(Continued from page 56.)

morrow. Let me deliver a dozen bright and early Thursday morning.''

The customer was scarcely outside the store before Bill had a large retailer in a nearby city on long distance, and placed an order for some of these collars by return post. He had tactfully allowed the customer to think that he ordinarily stocked the Potomacs, but to me it looked like a losing game in dollars and cents.''

''I want that fellow's business,'' said he, by way of explanation. ''He usually trades with Jones Brothers. Did you notice how pleased he was when he found I knew the style, and felt I did. or would, stock them! As a matter of fact.'' he continued, ''I have a collar in stock that is essentially the twin of the Potomac.''

''Then why didn't you sell it to him?''

''Because Jones Brothers stock it also, and it's a safe bet that it was because they tried to substitute that he came in here. So I probably forestalled a complaint on the ground of endeavoring to substitute by using a little tact. Anyway, I can afford to charge the trifling loss on this order to advertising.''

Perhaps these incidents, reflecting some of the causes behind complaints—carelessly handled statements in advertising, misjudgment of the customer's claims, poorly trained sales forces, implied disparagement of the customer's knowledge, and lack of tact—do not, after all, help very much in making a decision of whether or not it is wise invariably to follow that famous merchandising policy: ''The customer is always right.'' But they do at least help to demonstrate that while customers lost by adherence to right may be well lost—a loss which makes the loser truly richer—customers lost by wrong methods make for unnecessary poverty.

INLAND REVENUE DEBT REPORT

(Continued from page 50.)

	Samples
Found to meet claims	330
Found to meet claims by compensated value	18
Found nearly to meet claims and passed	8
Found sold without registration number	2
Found below claims	7
Total	365

The deviation from guaranteed value are usually very small, and the report shows an evident desire on the part of manufacturers of fertilizers, to live up to the claims made. It is, however, to be noted, states the report, that many fertilizers which in other years have claimed considerable amounts of potash, this year claim none, or notably smaller percentages than formerly. This is doubtless due to the scarcity of salts of potash, owing to war conditions.

Six brands of fertilizers make claims for very small amounts of potash, less than 0.50 per cent. These claims, states the chief analyst, represent no tangible values, and he thinks that claims for less than 0.50 per cent. should not be allowed. The Act (section 15) specifically concedes a deviation of half of one per cent. as possibly accidentally, and as negligible, provided that the total value of the fertilizer is not materially affected by it.

In 18 samples the words ''compensated value'' are used. The report states that it is sufficiently evident that many manufacturers have confounded the terms available and soluble as applied to phosphoric acid. The actual difference in value between water soluble and citric soluble phosporic acid may be very small, and the chief analyst felt justified in recognizing this fact in interpreting the results of analysis. One sample, states the report, (No. 70700) claims a total value so small as to render it practically useless as a fertilizer, and it should not be found on the market.

HAND TAPS

TAPPER TAPS

The Profit on a Job

depends many times as you very well know, on right *time* calculations for the doing of its various parts or operations. Any loss of time eats into profits and may wipe them out entirely.

In the processes of *REAMING*, to take care of the time factor,

Butterfield Tools

which are *guaranteed* fast cutters and clean workers, should be used.

Butterfield Taps, Dies and Reamers (see illustrations) are sturdy, honest and keen as all good workmen are. And they may be said to be *intelligent* also. For they are the products of the highest intelligence found by experience.

Re Gauges and Prices of Sheets.

Prices on black and galvanized sheets given below are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.
10 gauge	6 00	6 00

THE LONDON No. 3 ELECTRIC WASHER

Is efficient, practical, durable and economical. It has machine-cut gears. It has the very best Electric Motor specially made for the purpose. It has a Lovell Wringer made from the best live rubber. When you sell one of these machines you make your customer an enthusiastic advertiser of washing machines in general and of the "London" No. 3 in particular.

London No. 3 Electric

Many homes in cities where female labor is scarce are buying these high-grade and complete washers, the wife and daughters themselves being compelled to do the work. A little effort on your part will succeed in introducing this fine washer into many homes.

We make two hand-power washers; a water-motor washer, and a gasoline power washer. Every "London" washer is fully guaranteed.

Send for our catalogue. Use it to open up interest on the part of your customer.

The London Foundry Co., Ltd.

Don't Sell Your Customers Cheap VARNISH

Explain the situation to them. Varnishes can be purchased at all prices—the lower the price the less value for the money expended.

DOUGALL TRANSPARENT WOOD FINISH

sells at a fair price and is the best varnish value obtainable. Covers more surface—easier to apply—lasts much longer.

LET US SEND YOU CONVINCING EVIDENCE

FORGETTING

One of the things we all do well is to **forget.** **Names** that were household worlds yesterday are gone to-day. Because people knew your Name and your Line a year ago it is no sign they do to-day. They forget easily.

Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.

United States Manufacturers

Have your goods made for you in Canada until your trade here is large enough to warrant your putting up your own plant. An old established manufacturer, now busy on munitions work, with one of the largest and most up-to-date machines and metal-working plants in Canada, would like to undertake the manufacture of hardware, machinery or other metal specialty for the Canadian, British Empire and Allied markets with which preferential trade arrangements are now being planned. Address in the first instance:

MANUFACTURER
c/o
HARDWARE AND METAL
TORONTO

LONDON
HIGH GRADE
BARIRON

We have economical and correct methods of production, which means that you get bar iron that is absolutely reliable in toughness, strength and workability at the lowest prices.
The consignments you receive from time to time are the same through and through.
Carry a stock for your customers—a splendid profit awaits you. If you prefer we can ship direct from mill.

London Rolling Mills Co., Limited, London, Canada
Sales Agents:
Manitoba, Bissett & Webb, Limited, Winnipeg; British Columbia, McPherson & Teetzel, Vancouver.

Who is Your Customer?

THE finding, holding and multiplying of customers is your great business—probably your great problem. There's no royal road—no priceless route—to them. The plain way to find, interest and persuade them is the well-traveled way, the way of Public Advertising.

But the ideal medium—what is it?

If you are seeking a single medium of potency, of prestige, of sufficient circulation, you will find it in

MACLEAN'S MAGAZINE

You know of this magazine, but do you know it through use?

It can't do everything, but it can do much. It can make your product, commodity or service known nationally—and this at small cost per annum.

N.B.—Objectionable advertising not accepted. Both editorial and advertising columns are closely censored to keep them clean and decent.

Published by
The MacLean Publishing Co., Limited
143-153 University Avenue, Toronto, Ontario

A Straight Talk from the Manager

NO. 53

There is a man in Toronto holding down a position worth $2000 per year, who owes his success to having answered a Condensed Advertisement in Hardware and Metal.

He is only one of many who have found it profitable to read the Condensed Ad page. If you have never tried it you should read the Ads on page 81 before you lay down this paper.

There may be some proposition offered on the Condensed Ad page this very week which will help you to pave the way to a more prosperous future.

Economy This Winter

The Government is preaching it. Bankers are, Editors are. For war costs must be paid, and economy and thrift, personal and domestic, will pay our share of the appalling war debt that daily mounts higher.

Economy begins in the cellar—with a CANADA DUSTLESS ASH SIFTER. It will save pounds of coal a day, many pounds in a week, a ton or more in a winter. With coal at $8.00 or more per ton, we ought all to economize.

Put it up to your customer TO SAVE COAL and you'll have no trouble to sell the

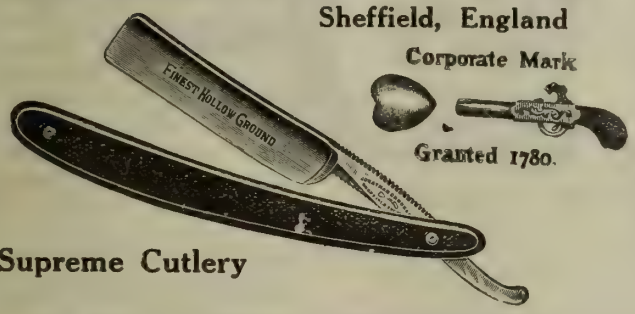
CANADA Dustless Ash Sifter

(See illustration)

Ashes go in barrel—coal into scuttle. Positively dustless and lasts for many seasons.

Every family is a prospect, and every sale represents a nice profit—found money to you. Have a half-dozen or so always on hand.

Jobbers everywhere supply them; order through them.



"I can sift ashes now"

Winning the Buyer's Favor

The best possible buyer is not made an actual buyer at a single step.

It is one thing to win the buyer's favor for an article and another to make adjustments incident to closing the sale. Winning the buyer's favor is the work of trade paper advertising.

Under ordinary conditions it should not be expected to do more.

If interested, tear out this page and keep with letters to be answered.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

AGENCIES WANTED

WANTED—LINES TO SELL ON COMMISsion to the hardware and general stores in Southern Alberta. I have been calling on this trade monthly for four years, and have a good connection. Good references furnished. Box 412, Hardware and Metal.

BUSINESS CHANCES

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

MACHINERY FOR SALE

FOR SALE — GASOLINE LIGHTING plant, also a number of second-hand tinsmiths' tools and machines. Apply H. L. Albrecht, Newton, Ont.

MISCELLANEOUS

FOR RENT—OLD ESTABLISHED HARDware premises in Goderich. For terms apply to Proudfoot, Killoran & Cooke, Barristers, Goderich, Ontario.

GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited. Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)

SHOW CARD WRITERS

SHOW CARD WRITERS EARN BIG money; no special talent needed; we can teach you in few months by our special system right at your home; our students earn money after second lesson; after six lessons one of our students took $17 worth of orders in one day; get particulars special December offer. Dept. H, Shaw Correspondence School, 393 Yonge St., Toronto.

SITUATIONS WANTED

WANTED — POSITION AS HARDWARE salesman, with 20 years' experience in wholesale and retail; capable of taking charge and buying, and can figure on any kind of contract work; good window dresser and show-card writer. Age 32, married, good appearance and sober. Box 414, Hardware and Metal.

SALESMEN WANTED

WANTED — AN ALERT TRAVELLING salesman to cover Eastern Ontario, Quebec and the Maritime Provinces, calling on the Hardware and Furniture trade. Must be capable of speaking French. State age, experience and salary expected. Box 413.

MACHINERY WANTED

I WISH TO PURCHASE ONE EACH OF THE following machines: Eight-foot Chicago steel bending brake, eight-foot Brown & Boggs squaring shears, with adjustable back gauge; three-foot barrel groover; three-foot former or rollers; three-foot bar folder; also latest type pipe swedge, wiring machine, turning machine, burring machine, elbow machines, pipe stakes, square head, etc. John Stewart, Westboro Ont.

UNIVERSAL

Meat Choppers

No. 333.
Chops three pounds of meat per minute. Diameter of hopper, 4 x 5 inches. Diameter of barrel, 2⅛ x 2¾ inches. Weight, 10 pounds each.

No. 304.
Chops four pounds of meat per minute. Diameter of hopper, 5 x 6 inches. Diameter of barrel, 2⅝ x 3¼ inches. Weight, 16¼ pounds each.

No. 305.
Chops five pounds of meat per minute. Diameter of hopper, 6 x 7 inches. Diameter of barrel, 3¼ x 4 inches. Weight, 27 pounds each.

Sanitary

All patterns are made with thumb screw or clamp, making them removable from bench or block for cleaning, putting into icebox, etc.

Economical

Owing to the construction of the feed screw considerable less meat is left in the machine after operating than other makes.

Ease of Operation

The crank in UNIVERSAL Meat Choppers are larger than in other makes, giving a greater leverage and requiring less work.

Finish

UNIVERSAL Meat Choppers are heavily tinned by an exclusive process, producing the finest possible finish. Handles are black and add considerably to the attractiveness of the machine.

Cutting Parts

"UNIVERSAL" knives and plates are of fine quality cast steel, uniformly ground and machined. The knives are hollow ground, cut cleanly, and retain their edge longer than other makes.

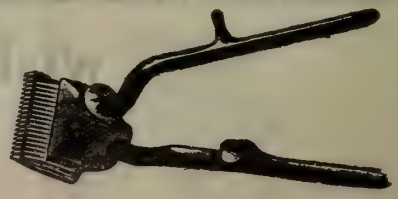
PRIEST'S HORSE and TOILET CLIPPERS

Made by American Shearer Mfg. Co.



present a complete line at a range of prices covering all requirements of the trade. They are all quality goods, and represent best designs and highest standards of workmanship, regardless of price.
Some styles of Toilet Clippers are illustrated below. All are heavily copper plated and polished before nickeling, thus giving a higher finish, which lasts much longer than ordinary plating. The utmost care is used in grinding and tempering the cutting plates, giving cutting qualities whose superiority may be readily demonstrated by comparison. No. 00 and No. 000 Shaver for beard and neck trimming, are clippers of the utmost lightness and refinement, not paralleled by any other American manufacturer.

STANDARD No. 0, No. 1 and No. 2.
Retailing at about $2.50. High-class barber's clipper.

No. 00 SHAVER
A light and elegant Clipper for beard and neck trimming. Retailing at about $2.25

A New Year's Message on Rope

Have you ever thought what this world would be like without rope?

Consider the effect on commerce, yachting and the fishing industry. Think what the loss of the lariat would mean to cattle ranches. Imagine the difficulty of getting gasoline for our motors, with no cables for well-drilling. Picture, if you can, the handicap in building operations.

In rope you are dealing with one of man's most useful tools.

And in selling rope of highest quality, you directly influence man's power of safety, efficiency and progress.

May you, in this New Year, perform your share of this great service and enjoy your share of its sure rewards.

Quality Service

Courtesy in Business

* * *

Fittingly framed and hanging in the Offices of one of the most important Public Service Corporations on this North American Continent is the following

'Did you say Please and Thank you?'

Broad minded men direct the destiny of that Corporation, men who know that public or private enterprises to be lastingly successful must operate for the public good.

Quality and Service are the two important factors in our business life today, but Courtesy is the door through which they must enter.

We are large producers of Hamilton Pig Iron and our output of Open Hearth Steel Blooms and Billets, Iron and Steel Bars of all shapes and size runs into enormous tonnage.

The products of our mills include practically everything that can be manufactured from Iron and Steel and these we distribute to thousands of satisfied customers.

Our business is an extensive one and a successful one. The World is our market: but our prosperity and success in the future, as in the past, depend upon the continued confidence, co-operation and good-will of the people we serve.

The Steel Company of Canada, Limited

HAMILTON TORONTO MONTREAL WINNIPEG

Do you sell Washing Machines— or merely "stock" them?

Dealers handling ordinary "washers" are, we find, disposed to judge the possibilities of this class of article entirely by what they are accomplishing with the mediocre machines.

Do not make such a mistake. Do not ignore the opportunity that may easily be made *your* opportunity by taking advantage of the already-created big demand for

THE "1900" LINE

The "1900" products include: Washing Machines, Hand Power Washers, Engine and Water Power Washers, and Electric Washers — all of them featurd by us in our extensive advertising to the public. The strong demand for our goods is due first, to their really exceptional qualities and the remarkable convenience of their devices; second, to the manner in which we make known their merits by publicity. Dealers not only find these products easy-to-sell but highly profitable in the selling—our margin for dealers is greater than you can figure on for almost any other article you sell.

The "1900" Wringers

a line of outstanding superiority—beautifully finished—and supplied in a full assortment of sizes and grades. Although employing the highest grade of material, we make them in such quantities and by such modern factory methods that they sell at a price comparing favorably with less successful wringers. In this, as in our washers, the dealer's profit is satisfactory.

Letters of inquiry will receive prompt response and will bring you full information about the entire line.

Toncan Metal News

Vol. 1—No. 6 PUBLISHED IN THE INTEREST OF BETTER SHEET METAL December, 1916

TONCAN METAL IN EQUITABLE BLDG.

Twenty-five Refrigerators Lined With Toncan Metal

Twenty-five refrigerators, varying in size from 24 feet long by 8 feet deep to 4 feet by 4 feet, were installed in the new Equitable Building, New York City, and all of them are lined with Galvanized Toncan Metal Sheets.

Low maintenance expense—that was the prime reason for using Toncan Metal Sheets in these refrigerators. Toncan Metal's ability to resist rust and corrosion is an assurance against frequent repairs and replacements.

The constant presence of moisture in a refrigerator makes essential the use of durable material for linings. And Toncan Metal is being used very extensively for built-in refrigerators as well as portable refrigerators by some of the most prominent manufacturers in the country. (Names on request.)

Another prominent Toncan Metal refrigerator installation is that of the Kansas City Railroad Terminal. Thirty-two refrigerators and a gigantic humidor in that handsome building are lined with Toncan Metal Galvanized Sheets.

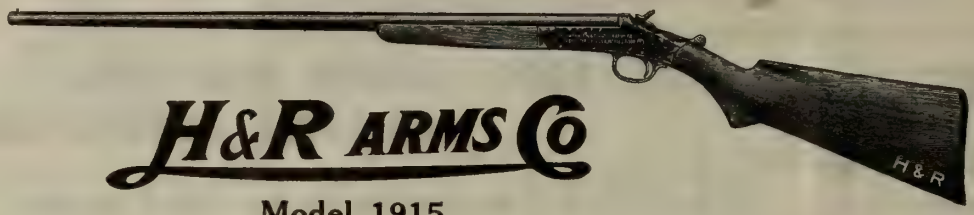
Equitable Building, New York City

LASTS 400% LONGER THAN STEEL ON GLASS MANUFACTURING PLANT

And Good For Ten Years More, Says User

Mr. Frank Bastin, Secretary of the Blackford Window Glass Co., Vincennes, Ind., writes under date of Feb. 3, 1916, as follows:

"Replying to yours of the 1st in which you inquire what we have to say at this time relative to the service Toncan Metal has given since its application on our buildings in the summer of 1912, we beg to state that as far as we can see the roof is in excellent condition, and bids fair to last ten years or more. This would be remarkable service from the fact that the large buildings in which the melting takes place are subjected to fumes and chemical dust, all of which are severe on metal **and would rust out in one year an ordinary galvanized steel roof.**"



Service such as this is not uncommon. Letters like that quoted above are being constantly received, all verifying our claims for the durability of Toncan Metal Sheets.

To the prospective Toncan Metal user actual service evidence of this kind is valuable. It facilitates investigation.

1916-1917

Standing on the threshold of a new year, we pause to look back over the passing year. 1916 has far exceeded our expectations for volume of trade. We fully realize that your co-operation and patronage have done much to make this success possible. It is very gratifying to know that our efforts to serve and please every branch of trade, commerce and industry have been so generously appreciated throughout Canada.

Past successes are but stepping-stones to future achievements. With the New Year, our efforts shall be increased to make the DOMINION RUBBER SYSTEM of still greater service and benefit to Canadians and to the trade of Canada. Our purpose, at all times, shall be to make this the one safe and satisfactory place to supply every need in rubber.

To one and all, we extend the Season's Greetings, and our best wishes for a Happy and Prosperous New Year.

AUTOMOBILE firms say that more cars will be delivered as gifts this Christmas than ever before. The result will be many new garages, which means business for the hardware merchant.

STANLEY GARAGE HARDWARE

is at once the easiest and most profitable hardware to sell for garage doors. It is the only complete line designed especially for garage use, and its merits have been made known, through advertising, and through pleased customers, to practically all who contemplate building. It is simple to apply, costs less than devices for hanging sliding doors, and, unlike the latter, it never gets out of order, but works easily and closes the doors weather-tight.

Sisal and Manila Ropes May Advance

Advance of 3½c Per Pound in Sisal Fibre Pressages Higher Prices for Rope and Binder Twine—Manila Ropes May Follow in Sympathy—Big Increases in All Ropes Since Outbreak of War.

THE advance on December 13 of two cents per pound in Manila and sisal rope to a new high level has caused more than passing interest in these products. Pure Manila rope is now selling at 25½c per pound basis, while sisal rope is selling at 19c per pound. When it is stated that pure Manila rope was selling at 15c per pound at the outbreak of the war on August 1, 1914, it will be seen that there has been a clear increase of 10½c per pound in the short space of two years and a half. Sisal rope ⅝ inch and larger was selling at 10½c per pound on August 1, 1914, while at present the sale price is 19c per pound. This is an increase of 8½c per pound. The net gain is not quite as big as that for pure Manila, but the percentage gain is higher by 10 per cent. In other words from August 1, 1904, to the present time the gain in the price of pure Manila has been 70 per cent., whereas the gain in the same length of time for sisal has been 80 per cent. Following figures will give a comparison of the way prices have increased in the various makes of cordage since August 1, 1914:

	Aug. 1, 1914	Aug. 1, 1915	Aug. 1, 1916	Nov. 27, 1916	Dec. 13, 1916
Pure manila, base	$0.15	$0.16	$0.22½	$0.23½	$0.25½
British manila	0.11	0.13½	0.18	0.19	0.21
Sisal, base	0.10½	0.11½	0.15½	0.17	0.19
African hemp, base	0.11	0.13½	0.15½	....	....
New Zealand hemp, base	....	....	....	0.19	0.21

There has been considerable criticism of the Sisal Regulating Commission of Yucatan on the ground that they have been in control of the market and have advanced prices as they willed. As will be noted the advance in cordage has not been alone in sisal products but in pure Manila, British Manila, African hemp and New Zealand hemp. There was promise of a big crop during the year but storms and hurricanes in Mexico in the Yucatan district are stated by the commission to have caused great damage to the crop. "One of the worst storms in the history of Yucatan swept the entire coast about the middle of November and caused millions of dollars in damage to the sisal crop and to the warehouses and shipping at Progreso," stated the representative of the Sisal Regulating Commission at New York. "Included in the damaged property were many small boats belonging to American concerns. Stretches of railroad tracks were undermined, and the movement of sisal into Progreso was hindered, receipts for November being 45.7 per cent. below the normal. As a result of serious storms in October the receipts of sisal in that month were 20.3 per cent. below normal. These storms have resulted in doing considerable damage to the growing sisal crop and resulting in the loss of a large quantity of baled sisal at the port of Progreso and elsewhere along the coast."

Freights and Shortages.

Freights from the Philippine Islands have been increased and the crop of Manila hemp has been heavier than that of last year, according to receipts of this commodity at Manila up to October 1, 1916. From January 1, 1916, to October 1, 1916, the receipts of Manila hemp totalled 946,000 bales as compared with 860,000 bales in the same period last year. Shipments to the United States have been 476,000 bales up to October 1, 1916, compared with 400,000 bales last year in the same time. Shipments to the United Kingdom up to October 1, of this year have totalled 333,000 bales, against 386,000 bales last year. The representative of the Regulating Commission points out that the statistical position of Mexican sisal is very strong. On October 1, this year, the visible supply of sisal was 190,000 bales less than at the same time last year. Stocks at interior points in Yucatan were stated to be only 4,920 bales, the lowest recorded in the history of the sisal industry in Mexico. Stocks in United States warehouses on October 1, were 19,378 bales as against 97,385 bales at the same time in 1915. The Commission points out that while the raw sisal fibre has advanced considerably during the past four years, the advance has been common with all other rope fibres. The following prices are quoted by the Commission as showing the comparative price per pound of Manila, sisal and New Zealand hemp:

	1913 Aug. 1	1914 Aug. 1	1915 Aug. 1	1916 Aug. 1
Sisal	$0.06½	$0.05⅜	$0.05⅞	$0.10⅝
Manila hemp, fair current	0.09⅛	0.07⅞	0.09½	0.12¼
New Zealand hemp	0.06¼	0.05⅞	0.07	0.11⅜

At the present time Manila hemp, fair current, is quoted at 14c for spot sale. New Zealand hemp is quoted at 11⅝c per pound, while sisal quotations have been withdrawn. As to what the future holds in store in the way of higher prices there is a field for considerable speculation. Cordage men assert their belief that in the face of conditions sisal is likely to go higher. The growth of this industry in Yucatan is a most interesting one. In describing the basic industry of the province of Yucatan before the Senate Committee of the United States, which recently held an investigation into the matter of sisal fibre, the counsel for the Regulating Commission, Walker B. Spencer, told of the development of the industry as follows:

Basic Industry of Yucatan.

"The growing of sisal hemp is the principal industry of the State of Yucatan, and seven-eighths of its population of three hundred and thirty-seven thousand people are engaged therein in one way or another. The revenues of the

Processes Employed in Making Files

Trip Through a File Factory—Describing Processes of Manufacture From Rough Bar to Finished Article—Many Important Operations—How Teeth are Made

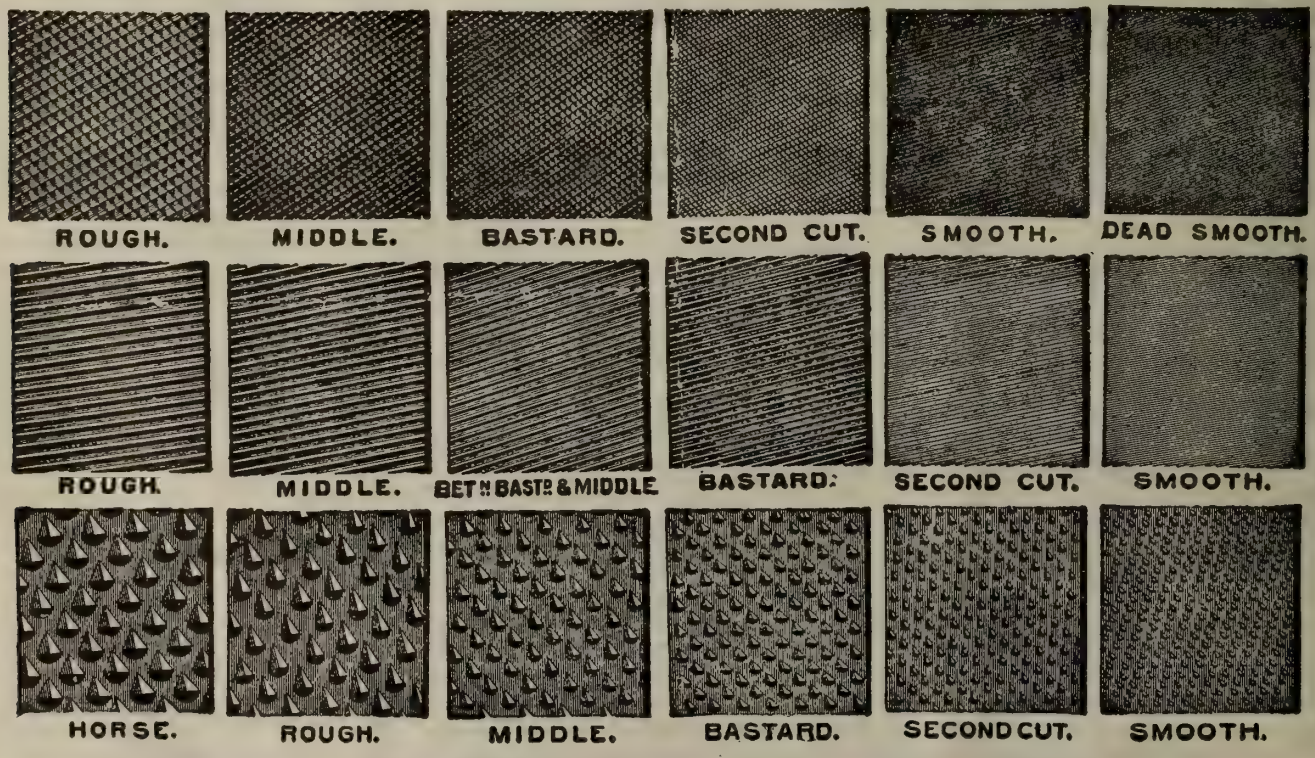
MOST people look upon the file as a comparatively modern invention. It is a common tool of the day, and the modern man has come to look at it as distinctly a thing of his own time, but, barring brass and iron working, which, according to report, Tubal-Cain engaged in five generations after Adam, the file is among the oldest implements of which we have a record. Studious ones will remember that the file first appeared in history in the days of King Saul of Israel, for in 1 Samuel, 12:21, appear these words: "Yet they had a file for the mattocks and for the coulters, and for the forks, and for the axes, and to sharpen the goads."

It's a far cry from the land of Gilgal, in the days of King Saul, to a modern file factory capable of turning out 7,000 different sizes, kinds, and cuts of files. Yet though times have changed entirely, the file is still one of the most indispensable of tools to a vast variety of trades—jeweller, brass worker, machinist, cabinet-maker, locksmith, millwright, and a multitude of other trades and occupations all the way from a blacksmith to a manicurist, depend upon the file as a necessary part of their equipment. Yet despite this fact most people have a very vague idea as to how a file is made. Nor have they any conception of the great variety of processes that intervene between the bar steel of the store room and the finished file of the packing room.

General Varieties of Files

Files are made of high carbon tool steel, the composition of which differs slightly according to the different purposes for which the files are made.

As a rough generalization, files may be divided according to shape as round, half-round, flat, triangle and square. Of course, there are many variations from these general forms, but that is rather a matter of future manipulation. The bar steel from which the files are made is received from the steel mills in these five primary shapes. These bars arrive in an exact multiple of the length of the finished file, and consequently the great element of wastage is eliminated.



From the store room where the bar steel is held, it is not a step to the first cutting machine. The long laths of heavy steel, perhaps half an inch thick, are fed into the machine, a heavy knife drops down with a soft "chug," and a file length is sliced off as easily as though it were butter. Length after length is sliced off and piled in little steel barrows, in which it is passed on to the next man, for in the manufacture of files each individual file has one man's whole attention for a short time at least in every part of the process.

A Place of Demon Noises

The shaping shop is a place of demon noises. Machine after machine is busily hammering away shaping the files from the plain length of steel into the familiar forms we know. The file length is first heated red hot in a kind of forge; then it is seized deftly in a pair of heavy pinchers and placed on a machine. A heavy hammer falls, is lifted, falls again and again; the workman turning the file deftly all the while, till the familiar long spiked end known as the "tang" appears and until the file tapers slightly to the point; it is then run through great rollers while still hot, and tapered a little in thickness, and there you have a rough piece of steel of the general shape of a finished file.

Annealing the Steel to Make it Take the Cut

The rough file shapes next journey is to the annealing furnace. The hard carbon steel, though it will take the shape under the influence of heat and heavy blows, would yet be too hard for the fine cutting that follows. It must be softened sufficiently to take a cut while still cold. This process of softening the steel is known as annealing. This is done in great furnaces that are not unlike the baking kilns of a brick works. One side of the furnace is open. Into this the

Top row: Double cut. Middle row: Float cut or single cut. Bottom row: Rasp cut.

barrows of wrought file shapes are wheeled and piled in regular piles, so that the heat may circulate around them. One furnace is for one variety of files, another takes a finer kind that need a greater heat; another, still, one that requires less heat. When the furnaces are filled the opening is closed and sealed up, and the oil fuel turned on. An immense heat is generated. In flat work the average heat is 1,430 degrees. The rough file shapes are kept at the temperature for five or six hours, and are then gradually allowed to cool for 15 hours. When the rough shape has come out of this ordeal by fire, it has still one or two preliminary processes to go through before it is ready to take in its final appearance.

A Laid Road to Travel

In this terrific heat it not infrequently happens that the bar steel bends a trifle, or shows little irregularities; these are hammered out by hand. But that is not all, the terrific heat of the furnaces has a tendency to decarbonize the outer skin of the steel, making it too soft for use, as teeth cut on this softened outer skin would scale off under service. It must therefore be renewed so the rough shape once more takes up its journey to the rows of great grindstones, each as tall in diameter as a man. Thirty small shapes, 6 large shapes are arranged on a kind of tray, a lever is pulled and they are pressed against the rapidly turning edge of the dripping grindstone, every face of the shape is thus ground till the outer skin has entirely gone. In the case of special shaped files, this work is still done entirely by hand, one man shaping them on the stone just as a man might grind an axe. Even then there is still another preliminary operation. The file shapes may come from the grindstones with little irregularities and not quite level. The file must not only appear level to the eye but must be absolutely level. It is therefore placed in a machine where a hard file running in grooves planes off the irregular surface and leaves it true as a die.

From this planer the rough file is passed on to the cutting machines that give it its characteristic appearance.

How Files Are Cut

The cutting machine is not a large affair, yet it is wonderfully minute in its operation. A small cam lifts a driving hammer that holds a chisel, when the cam gives a half turn it loosens the hammer, the chisel is driven down the file, leaving a diagonal cut across its surface. The cam in its upward thrust compresses a heavy square of hard rubber; this is the force behind the hammer, a force sufficient to leave a cut in the softened steel. This first cut is technically known as the "over cut." Some files have only this "over cut," but the majority have the cuts diagonally across the file in the other directions as well; this is known as the "up" cut. A wheel at the top of the cutting machine varies the tension, as the cutter advances up the file, the tension is increased, giving a deeper cut. This accounts for the graduation of teeth noted in all files. On this machine there is a gauge that regulates the number of cuts per inch; it may be only a dozen or so, or it may be in the hundreds, but whatever it is, the cuts are spaced with mathematical accuracy. In the larger files it is easy to watch the fall of the chisel and see the cut actually made. In the finer work, however, the cut is so rapid that were it not for the slight whirring noise and the gradually increasing cuts on the face of the file under the machine, one would feel sure that the machine was still.

The accompanying article describes in detail the process of manufacturing files. Files are carried in stock and sold in almost every hardware store. When selling files, salesmen are often inclined to give very little thought to the various processes through which the file has passed before being placed upon the market. Quite frequently customers will ask why one file is so much more expensive than another. Clerks not familiar with the methods of manufacture are often unable to answer the question. The accompanying article throws considerable light on the subject. The article should be read by every hardware merchant and clerk.

The Order of Cutting

The cutting is started with the edges and the flat is cut last, which means four distinct cutting operations with every file, to which a man has to devote his entire attention. Despite this a trained worker can cut from 8 dozen small files to 120 dozen large files per day.

Round files are cut with a spiral cut, the tang of the file being caught as on a lathe and keeps turning through the whole operation. The half round is cut with a narrow chisel that makes a series of parallel cuts up the face of the file, necessitating still greater attention.

Re-hardening the File

Once the file is cut it is ready to be hardened again. First it is washed off in a soda solution to remove the oil that has been used on it in its different treatments, after which it is painted. This is done to protect the teeth on hardening. It is then ready for the final hardening. To do this it must be again heated red hot; this is done by dipping it in huge caldrons of molten lead. There are many of these, for each variety of file has to be heated to a different temperature. The system of using molten lead is adopted to ensure a more even heating. Once heated to the proper temperature, it is seized in long pinchers, and, still glowing, is plunged into a salt solution, where it is caught by an iron clamp to prevent it buckling in hardening. Taken from the hardening bath it is brought to a sand blast furnace; there the force of the sand removes all traces of the different processes it has been through and leaves the file looking new and bright. The familiar blue of the file is made by heating the tang in the molten lead and dipping it while hot in oil. This, then, is the life story of a file.

Rasp Differs from File in Cutting

A rasp is not greatly different in its method of making. All the initial processes are the same, and save that it is made of a lower carbon steel and is consequently softer, it differs from the file only in its method of cutting. In reality it is not cut, but punched. A punch, working on the same principle as the file cutting machine except that the punch moves in an arc across the rasp, digs each corrugation with a short upward jab. Each tooth in the rasp indicates a separate blow. From this on the process is the same, save that the steel being softer is not heated to the same temperature as the file.

In each step of this journey there is a rapid examination, but at the end each file comes under the personal inspection of an expert. Here it is closely examined, tested on a block of steel to see if it rings true, after which it is made to cut an extra hard steel, to ensure the teeth being sound. If it passes these tests it is washed and brushed and sent to the packing room, where it is boxed and stored ready for orders.

Files are of innumerable sizes and kind. There are files that run 83 dozen to the pound, and there are files that weigh 16 pounds apiece. They are graded as to finish in six grades, which are decided by the width or closeness of the cut Rough, Coarse, Bastard, Second Cut, Smooth and Dead Smooth, but the Bastard, Second Cut and Smooth are the varieties in general use. People often wonder why the smooth files should cost so much more than the rougher variety. It is mainly a matter of the difficulty of the operation. A man can cut twice as many bastards in a given time as he can

(Continued on page 25.)

HARDWARE & METAL

CANADA'S ONLY WEEKLY HARDWARE PAPER

Vol. XXVIII. TORONTO, DECEMBER 30, 1916 No. 53

TO WATCH the markets is the prime necessity of the merchant to-day.

* * *

MAY THE New Year bring all the prosperity of 1916 and, with it, Peace.

* * *

FACE the New Year with the solid confidence that can be acquired only by a very thorough inventory.

* * *

THE OLD song, "Be Careful, Very Careful What You Write," seems to apply to the matter of diplomatic notes.

EFFECT OF PEACE ON STEEL

ALTHOUGH prospects of an immediate or early peace seem remote to the average observer, there are a number of well-informed business men who are exceptionally optimistic. They feel that peace is much nearer now than it seems. Buyers are becoming cautious, and during the past few weeks there has been more or less of a cessation in buying. Prices of many commodities have reached what is considered dangerously high levels. Buyers of hardware are now naturally asking the question, what is going to happen in iron and steel during the coming year? Of late there has been a slowing down in the markets and there has been a feeling that different conditions might prevail during 1917. Just at this time opinions of recognized authorities are valuable. We are therefore reprinting an editorial from the December 26 issue of the *American Metal Market*. Under the heading, "New Year May Be Different," it reads in part as follows:—It is a conjunction of circumstances, we think, that has slowed down the iron and steel market, Germany's peace overture being one thing, but the advent of the holidays a very important thing also. Then there was reason to suppose that the movement had nearly spent its force in any event. "What might have been" is always an uncertain thing, but in this case there is the printed record of before the peace overture, of predictions that the Steel Corporation's unfilled tonnage would show a much smaller gain in December than in November, and possibly a loss.

The year's business is over, and one can set down now what has occurred. Price advances, according to our composites, have been as follows, per gross ton of pig iron and per net ton of finished steel: Pig-iron, 1915, $5.50; 1916, $11.00. Steel, 1915, $13.00; 1916, $29.00.

Prices advanced twice as much in pig-iron, and more than twice as much in steel, in 1916 as in 1915. In other words, they advanced twice as much after Chairman Gary's "stop, look and listen" interview than they had done before, in order to prompt him to give the public some advice. The interview was published January 6th. We reminded our readers of it November 10th, and may do so again.

The plain prospect for 1917 in the iron and steel market is that it is to be one of sustained prices for a time, without important advances and with no declines, except not improbably some declines in the premium prices for early deliveries of steel and in pig-iron in some districts. How long the time will be one should not venture to predict, unless for an experiment, but according to precedents, which count particularly little at this time, six to nine months would seem like as good a guess as any.

The one clear thing is that the steel mills will be strongly disposed to hang together in order to avoid hanging separately. No one can conceive any reason why a price should be cut in circumstances like these. It is like 1908 without the panic of October, 1907, and without the great decrease in demand. Of course all interested in the market will keep a very close watch, for possible accidents, even though theory does not suggest that there will be any.

THE NEW YEAR

BUSINESS men can look back at the past year with satisfaction. It has been a year of abounding prosperity despite the fact that business has been carried on amid the thunder of Armageddon. It has

brought sorrow and suffering—but also profits. Business has probably never been better than it is at the present time.

The prospects for the year ahead are even more promising than they were at the threshold of 1916. There seems every certainty that the era of heavy earnings, and consequently heavy spending will continue. There is, however, some uncertainty. If the war ends during the summer of 1917—and everyone hopes whole-heartedly that it will—the following winter will be a time of stress and strain. Certainly it devolves on every business man to plan for the future very carefully and deliberately, overlooking no possibilities and refusing to let the confidence engendered by our present joy-ride prosperity influence his clear perspective of the days that are ahead.

YES, BUSINESS GOVERNMENT

A FEW issues back HARDWARE AND METAL voiced the opinion that Canada needed a business Government. It was not contended that the Conservative Government should step out or that a Coalition Cabinet should be formed. The view was expressed, however, that the good example of Premier Lloyd-George should be followed so that each cabinet post might be filled by the one man in Canada best fitted to fulfil the duties of that particular department. A cabinet selected from the available material in the House cannot be perfect. War times call for a cabinet as near perfect as possible. Sir Robert Borden should get the best men in Canada for each post in his cabinet, forgetting political expediency, thinking only of efficiency.

There is no reason why the idea of business Government should be restricted to war times, however. The world is taking lessons in efficiency in the school of that rudest of teachers, Mars. That the perfection of organization for war that is being attained should be carried on and applied in our organization for peace is an idea that we should foster. Consider the wonderful precision of that great machine, a modern army—the feeding of millions of men strung in an attenuated lines miles long, the caring for thousands of wounded in a single day, the cohesion of purpose effected between units separated by continents. Then consider the haphazard methods of Peace times, when unemployed loaf in the cities and the farmer cannot get help, when business concerns act as distinct units without anyone to lead them to co-operation.

Yes, Business Government—We need it now and for all time. Let the present Government make this departure now and all future Governments continue the New Idea.

GOOD ROADS

THE relation of good roads to good business is a very direct one. To the average hardwareman, who depends to a very great extent on his farm trade, the question of good roads is an all-important one. When the roads are good the farmer has less reluctance to hitching up and driving into town—less inclination to do his shopping at home with the mail order catalogue spread out on his knee. Bad roads are allies of the catalogue houses.

And so the hardwareman should be strongly behind the movement for Good Roads. In addition to the benefits which he would receive in common with all citizens from an improvement of the road system, he has this more personal advantage in sight—Better Business.

Canadians must face the fact that the roads in this country are not good. We have been growing too fast and too big to pay much attention to our highways; a fact which any touring motorist will subscribe to with lurid fluency. It is time we started to overcome this drawback, time we went at the whole problem of Good Roads determinedly and thoroughly.

A GOOD WORD FOR THE TRAVELER

BY all means let us say a good word for the traveller. His "merry morning face" alone has started many a merchant out on a successful day. His very presence is an outward and visible sign of your prosperity. Who is going to make a bid for the trade of the down and outer? Ah, but say some, he induced me to buy a lot of dead stock. Well you didn't think it dead when you bought it, and it is only dead now probably because you have come to think so. He handed you a line of argument that you, a hard headed business man with an eye peeled for the sight of profit, assented to. The goods haven't changed, and the argument hasn't lost its force. Why then is the stock dead? May it not have to be admitted that the stock is dead because you are showing an inferior brand of salesmanship to the cheerful lad who sold you in the first instance. Yes, the good old traveler goes on traveling rain or shine, always with a cheerful smile and an apt retort. You can't help liking the beggar, even if he does eat into your time. Well if he does, he gives you value for it.—Little useful hints, selling ideas, and advertising possibilities. He's a friend at court. He serves his firm loyally, but is loyal to his customers also. He takes a lot of abuse with cheerfulness, perhaps he deserves a little of it, but at the back of it all he is one of the best friends the retailer has.

Don't be stingy with the kind words. Remember you probably had a better breakfast than he did, and you didn't spend the night, in a draughty moth eaten hotel. Yet he's cheerful. Don't let him beat you in the little matter of cheerfulness. And don't forget to say a kind word for the traveler.

Fire Losses in Relation to Rising Prices

Merchants Should Be Careful to Increase Fire Insurance Policies to Cover Advances in Value of Stocks—Inventory at Cost Price Will Not Prejudice Store in Case of Fire—Replacement Value Governs

THE increased values that have come automatically to goods upon the shelves of many merchants during the past six months or one year raise two important questions that the merchant should consider carefully at this time in relation to the insurance of his goods against loss by fire. Failure to do so may result in a serious and unexpected loss.

Is a Double Inventory Needed?

The first question that arises is, whether a merchant will prejudice himself with the fire insurance adjusters if he presents to them an inventory of goods taken at a value far below their present wholesale price, in place of one in which the goods are figured as worth the cost of replacing them. One merchant suggested to HARDWARE AND METAL that it would be advisable to prepare two inventory statements—one for his own use with the goods inventoried at the lower figures, and the other with goods taken in at present wholesale prices. He thought that the latter was the only way in which to guarantee to him a fair settlement in case of fire.

Losses Adjusted on Present Values

This fear, however, is unfounded. HARDWARE AND METAL discussed this question with a number of fire insurance adjusters as well as managers of fire insurance companies, and all were agreed that a settlement for a loss by fire would in every case be established on the basis of what it would cost to replace the goods at the time they were destroyed. In other words, the inventory would be accepted by them at what we might call a "catalogue" of the goods that were in stock, but the price that they would allow for that section that was burned would be determined not necessarily by the merchant's own figure, but by what they were satisfied would be the cost of restoring the goods to him again. Thus a merchant, by preparing the "lower" inventory, can keep to safe business principles, and at the same time suffer no loss thereby in case of fire.

"We settle our fire claims in such cases," said one of the best known adjusters in Canada, "on the basis of the market value of the goods at the time they were destroyed—that is, the cost of replacement, not the figures set down in the inventory of the merchant. Frequently, indeed, we find the valuation of the merchant is too high, because he makes no allowance for the depreciation of stock, owing to it being shop worn, for instance. Then there are goods that are to a certain extent out of date or out of season, although these are found more in a dry goods store than in a hardware, and in these cases, of course, the merchant must cut down the original value of the article to make allowance for its lessened value—and if he hasn't, we do it for him. At the present time, of course, there is not the same need for depreciation, for, as you say, a great many of the goods have increased in price, and of this all fire adjusters are well aware."

Let us state the case in the manner in which it was presented to a well known business expert: "If retail merchants inventoried merchandise at the cost price when market prices at the time of the inventory were much higher, would they be at a disadvantage in the event of a fire in being compelled to produce the last inventory, and would the prices on it be taken as a basis of adjustment of fire loss rather than the market price?"

The Cost of Replacing

To this his reply was: "Insurance authorities assure us that the basis on which the adjustment of a claim would be made would be the actual cash value of the property at the time any loss or damage occurred, not exceeding what it would then cost to replace with property of like kind and value."

He added: "The actual cash value may be the market price, or it may be subject to depreciation for the difference between old and new property or other causes. In the settlement of a loss, the question of the first cost of the property has little to do with it, the insurer being entitled to collect on the basis of the actual cash value on the day of the fire and he should keep his insurance up to such percentage of the actual value as will comply with the full insurance conditions expressed in fire insurance policy."

How Co-Insurance Clause Works

This last clause suggests another important subject—the outcome of the former, and affects those that have the 80 per cent.—as it usually is now—co-insurance clause in force. This, to put it briefly, means that the merchant agrees that he will keep his stock insured up to 80 per cent. of the real value of his goods.

Suppose that under normal conditions the value of a stock was $10,000, and if he was insured for 80 per cent. or $8,000. Then the value, owing to the present abnormal market conditions, goes up to $15,000, to use a simple example, although this would not be the average increase. In order to comply with the co-insurance clause, he should have his goods insured for 80 per cent. of the $15,000 or $12,000. What if he fails to do this? Should the fire destroy his full stock he would get the $8,000; but in this case he would lose the difference between $8,000 and $15,000, or $7,000. Had he insured up to the $12,000 he would have lost only $3,000. This point he meets by saying, of course, that it is very seldom a total loss occurs.

Loses Heavily on Partial Destruction

But he stands to lose heavily if only a partial loss occurs. Suppose his loss is only $5,000; in that case he would not get the whole of this amount even if he were insured for the $8,000. The insurance companies would take the stand that he insured only for $8,000 instead of $12,000—that is, for eighty one-hundred and twentieths, or two-thirds of what he should have insured for. He violated his agreement to this extent, and, therefore, they would pay him only eighty one-hundred-and-twentieths of the $5,000, or two-thirds.

Buildings Also May Need More

It should be noted that the co-insurance clause is interpreted by the insurance companies, not on the valuation by the merchant, but on the cash value of the goods or property at the time of the fire, so that the insured, if he cannot show that he has increased his policy to keep pace with the increase in the real value of the merchandise, will be penalized.

This point applies as much to his property in the way of buildings and equipment as to merchandise that is for sale. One of the leading fire insurance brokerage firms in Canada are sending out warnings to their clients urging that in view of the increased cost of building that it would be well for them to consider whether it would not be advisable for them to add to their policies to cover the increase in the value of their own building, and great many are responding. Ordinarily, of course, a building depreciates year after year, but not at the present time.

How Co-Insurance Loss Works Out

The secretary-treasurer of several wholesale dealers associations of the United States, in a statement that he has just issued bearing on this point, thus illustrates the actual loss on merchandise owing to a failure to appreciate this point:

Example.

A stock of merchandise inventories at actual cost price	$100,000.00
And is insured under 80%—Co-insurance clause at	80,000.00
And market value increases to	140,000.00
And amount of insurance is not increased and a loss occurs amounting to	20,000.00
The assured should have increased his insurance to 80% of the increased valuation, $140.000, which 80% is	112,000.00
Therefore having failed to do this he receives 80-112 of his claim of $20,000 or	14,285.71
Incurring a loss of	5,714.29

"In view of the foregoing," he adds, "it will be the part of wisdom to watch insurance protection closely so that the amount of insurance carried affords protection to the stock at its cash value, which is the cost of replacement with like merchandise at the time of loss. Those who do not increase the amount of fire insurance in keeping with the increasing values are liable to be compelled to bear a portion of any fire loss at the time of an adjustment of claim under insurance policies containing the co-insurance clause."

PROCESSES EMPLOYED IN MAKING FILES

(Continued from page 21.)

smooth. The smooth requires more work and can in no way be rushed.

Sizes of Files

Files are made in certain stated sizes Up to 6 inches they go by half inches, as 4, 4½, 5. From six inches on they advance by inches, as 6, 7, 8. From ten inches on they are made in two-inch sizes, 10, 12, 14, etc. This is a fact not generally known and orders are often received for files of 6½, or 13 inches; such sizes are not made. Of course, it is possible to make them, but it means readjusting the machines to fill the separate order, and naturally it takes some time to make, whereas the standard sizes are always in stock and can be shipped at short notice. While files now are practically all machine made, it is not a matter of feeding the rough steel into a machine. In conjunction with the machine, human labor and skill must be used, and the finished file that you buy has been through personal supervision of two or three dozen expert workers, and has had the same conscientious care that might be given to the most highly technical machine.

PIG IRON AND STEEL IN 1916

The Dominion Department of Mines has received from the producers a record of the production of pig iron and of steel ingots and castings during the first eleven months of the year which together with estimates for December show a probable production of pig iron in Canada during the twelve months ending December 31, 1916, of 1,171,727 short tons (1,046,185 gross tons) and a probable production of steel ingots and direct steel castings of 1,454,124 short tons (1,298,325 gross tons), of which 1,423,485 short tons were steel ingots and 30,639 short tons were direct castings.

The production of pig iron in 1915 was 913,775 short tons and of steel ingots and castings 1,020,896 short tons, showing an increase in the production of pig iron in 1916 of about 28 per cent. and an increase in production of steel ingots and castings of over 42 per cent.

The 1916 production was greater than that of any previous year, the second largest production of pig iron having been 1,128,967 short tons in 1913 and of steel ingots and castings 1,168,993 short tons also in 1913.

Six Months Ending—	Pig Iron Gross tons	Steel Ingots Gross tons	Direct Castings Gross tons	Total Gross tons
June	501,872	577,999	11,715	589,714
July	82,154	101,178	2,284	103,462
August	78,450	108,889	2,299	111,188
September	91,736	116,828	2,524	119,352
October	101,436	120,577	2,024	122,601
November (partly estimated)	95,237	119,468	2,745	122,213
December (estimate)	95,300	119,920	2,805	122,795
Six months ending December	544,313	692,970	15,641	708,611
12 months ending December	1,046,185	1,270,969	27,356	1,298,325

Of the total production of steel ingots and castings in 1916, about 43,790 short tons (39,098 gross tons) were made in electric furnaces. In 1915 only 61 short tons were reported as having been made in electric furnaces.

SMUGGLING AT BORDER TOWNS

Retail Merchants Try to Get Custom's Authorities to Act

For many months the Association has been urging upon the Custom authorities at Ottawa to take action to prevent goods being imported by farmers and others across the border without duty being paid.

This matter has been taken up both by the Saskatchewan Provincial Board and the Association head office in Ottawa. It has been pointed out that it is not fair to the retail trade of Canada to allow goods to be purchased in the States by residents of this country and brought across the border without the customary duty being collected. That the representations are bearing fruit is borne out by a letter received by the Association from the Commissioner of Customs at Ottawa, which reads:

"With further reference to correspondence in regard to complaints received by your Association that farmers living near the boundary line are in the habit of smuggling goods from the United States:

"I have the honor to advise you that this matter has been carefully investigated by one of our special officers, whose report is now before me. The report shows that lumber and other goods have been brought in from Scobey, Montana, without report at Customs. Several seizures have been made by our officers, which have served as a warning to other parties in the locality.

"Our special officer conferred with members of the Royal North-West Mounted Police Force in the district, and was informed by them that this illicit traffic has diminished this fall, and that persons residing near the frontier are now under the impression that the Customs officers are active and on the lookout for irregular importations."

The Association requests that any merchant who is aware of cases of smuggling should immediately report to the Provincial Office, giving full particulars as to the name of the person bringing the goods across, description of goods, if possible, and any other particulars of a like nature, whereon complaints can be laid before the Customs officials as from the Association, not from an individual merchant.

Personal

Fred Braithwaite, of Braithwaite Bros., Huntingdon, Que., was a visitor in Montreal last week. With Mrs. Braithwaite he was returning from the happiest holiday of his life, his honeymoon.

From Captain Charles J. Smith, formerly manager of the sample room with Starke, Seybold, Ltd., Montreal, there was received in good time for Christmas a card bearing his good wishes to the firm through H. B. Seybold. The fact that a few days after mailing the card the gallant young officer was killed in action, in which his regiment, the 13th Canadian Battalion, Royal Highlanders, did heroic work, adds more than mere interest to the card, which is a treasured memento to the firm of a valued employee, and a worthy name on the honor roll of the house.

Better Roads Will Increase Trade

Deputy Minister of Highways Asserts Good Roads Are Essential to Intensive Farming —Farm Lands Will be Occupied With More People and This Would Bring More People Past the Merchant's Place of Business.

"GOOD roads will mean more intensive farming. Greater production will result. Where farms are now in two hundred acres and one hundred and fifty acres and one hundred acres there will be smaller divisions. With good roads and a higher state of production possible, these same tracts would probably be cut up into ten, twenty, thirty or fifty-acre farms. Each farm would have its one or more families. The population of the country districts would be greatly increased. This could not help but benefit the merchant in the small town. Population would be brought to his very door almost. If he is progressive he should be able to capture a goodly share of this additional trade. Good roads make the town more accessible to the farming community and there should be definite results in the way of increased trade," stated W. A. McLean, Deputy Minister of Highways of the Province of Ontario to HARDWARE AND METAL.

"For the larger marketing centres there is of course an added advantage. In suburban districts, that is in districts adjoining cities the population is usually more dense than that found in country districts adjoining smaller places. In the districts adjoining Toronto where there are good communicating roads the population is more dense on the farming areas than where there are poor roads. Trade or business follows population. That is something that is axiomatic—it is plainly evident. On different sides of the same street more business is done because the people favor one side more than the other. Trade comes to those business concerns located on the favorable side because they are in the path of the people. In Toronto the west side of Yonge Street is the one with the greater number of people. Business concerns located on that side of the street are considered to have a better location. And accordingly higher rentals and a higher valuation is placed on property on that side of the street.

"The same holds true with respect to the rural community. If you bring a greater number of people into the district there is bound to be a larger number within range of the merchant's store. The more people that pass his store the greater chance he has of increasing his trade," said Mr. McLean. Mr. McLean has spent quite a number of years in the service of the province of Ontario in an endeavor to make good roads more popular. There can be no doubt about there being a growing sentiment toward this end. A distinguished statesman in the United States said: "You cannot increase the prosperity of the country as a whole without increasing its highway facilities." Highly productive farms can never be made profitable adjoining poor roads, and the first agency towards increasing the prosperity of the farmer is to create the cheapest outlet for his products to the market.

Mr. McLean gave a concrete instance of the way good roads have benefited certain small towns. In that part of Ontario adjoining the United States along the Detroit River there are a number of small towns that have benefited greatly because motorists have found that they make pleasant rides in their motor cars. The towns of Blenheim and Leamington are two in particular. At these places the motorists found good accommodation in the shape of hotels. Demands on the farming community of the districts for supplies for the hotels became greater. More money was put into circulation in that community and the storekeepers in turn reaped a benefit both through the prosperity that came to the farming community and because the motorists themselves spent money in the town.

What Increase of Farming Community Means

In a recent report of the Highways Commission of Ontario the significance of the rural trade is pointed out in the matter of dollars and cents. They say: "Let us look more closely at the relation between the city and the farmer. First of all there is the very plain fact that the farmer is a large consumer of manufacturers which do much to maintain the cities. In the Dominion in 1911 the following articles which depend almost wholly upon the rural districts for their market were manufactured:

Agricultural implements	$19,115,894
Axes and tools	1,841,143
Carriages and wagons	7,920,567
Carriage and wagon materials	2,865,618
Cream separators	632,256
Harness and saddlery	1,971,162
Incubators	154,550
Pumps and windmills	1,361,046
Seed cleaning and preparing	1,484,485
Whips	123,500
Wire fencing	2,170,844
	$39,641,065

"And of course these give but the merest glimpse of the purchases by country from town. But this consideration only opens the subject. The city has a stake in agriculture in the matter of local trade or shopping and, in regard to its food supply. Around every city extends a belt of farming country which is in peculiarly intimate relations with it. Much

Gravel Road. This road, carrying 1,500 motor vehicles daily, is treated with a light bituminous oil, carrying 40 per cent. asphalt.

of the food consumed in the city comes from that belt, the men who grow that food are customers of the city's merchants and swell its trade It is not easy to estimate the width of this belt within which relations are especially intimate, but under present conditions, your commissioners are disposed to regard it as about seven miles.

"On the basis of the present average value per acre of farm produce in Ontario the adoption of improved methods of production within the area bounded by a circle seven miles from the market centre would result in an increase in the value of agricultural products within that area amounting to over $1,400,000 annually. Such an increase would give a tremendous impetus to the activities of every business in the city. What centre would not do its utmost to secure the location within its bounds of an industry bringing $1,400,000 annually into the community? Cities have practiced the bonusing of other industries contributing in various degrees to their growth. They would do well to recognize the fact that the farmer is an integral part of their life, and to make the adjacent farming community one of their assets."

The town of Belleville, is one which has recognized the value of good roads as an aid to trade. John Elliott, president of the local Board of Trade of that city, said: "We of the Belleville Board of Trade have discussed this matter a great deal. We feel the welfare of this city, to a large extent, depends on the avenues of trade furnished us by way of good roads, to enable our friends to come a distance of thirty miles to our market. The Belleville market is well known, one of the best in the province. We have farmers coming here over thirty miles on Saturday mornings. We feel the welfare of the city is bound up in transportation. We require a greater amount of food to reduce the high cost of living in this city. We want to have the greatest number by giving us good roads, where we can give the farmers twenty-five or thirty-five miles from Belleville, an opportunity to market their product along the same lines as those who live within a radius of ten or twelve miles from the city."

Macadamized Road in Winchester, Ontario.

The benefit to merchants of good roads cannot be disputed. Anything that will increase the population of a district, make it wealthier and a more pleasant place in which to live is going to result in very material benfits for the merchants of that community.

The Supervision of Salesmen

An Interesting Address on Means of Getting Salesmen to Do Their Best Work—How the Man in Charge of Staff Must Handle His Men — Qualities That Enter Into Salesmanship

AT a recent meeting of the New York Salesmanagers' Club, Bevan Lawson, General Salesmanager of the Autostrop Safety Razor Company, New York city, delivered a highly instructive address on "Supervision of Salesmen," saying in part:

Our main consideration is directed to firms which also employ a considerable sales force, but are both able and disposed to give to each salesman all of the individual attention that he requires, and the question now repeats itself—"Can such supervision be too intensively applied?"

The answer which I will now make in a definite statement will really be the text for my entire address: "Supervision which leads a salesmanager into personal contact with his men on the road or which develops the salesman's personal resourcefulness cannot be too aggressive because it brings mutual understanding and argues for everything which is of benefit to the salesman.

"On the other hand, supervision can easily be too intensive if it leads salesmen to depend upon their salesmanager for every minor suggestion, or in any degree interferes with the salesmen's freedom of thought and action." This is the answer to the last of the four subdivisions of the subject, and I am going to largely confine myself to a consideration of the salesmanager's personal leadership and influence in the ethical sense, and will leave discussion upon the physical direction of men for later opportunity when this meeting is thrown open for the exchange of opinion and experiences.

What is Stimulation of Salesmen?

"Most of us can call up a picture of what Stimulation of Salesmen means as applied to our own business, but if we are going to discuss it we must define just exactly what stimulation is, so that we may start on a common basis, and then try to follow that definition through in its practical application to business. Stimulation is the infusion of new life into an individual, or new energy into a project. Sales stimulation is the quickening by inspiration and the rekindling by example of the active and latent forces which are under a salesmanager's control or are at his disposal.

Inspiration may be both imparted or received, but being in itself largely regarded as a spirit rather than a substance, inspiration in business affairs may be described as that intangible something which we try to impart to the mind, but which finds its abiding place in the soul, and therefore is an impelling and a vitalizing force capable of achieving results both visible and invisible.

Training in Discomforts

"Most good salesmen are highly temperamental, and their effectiveness may be very easily disturbed by some neglect or misunderstanding between themselves and their sales department. Al-

though we may have but little patience with the vagaries and notions of men who are hypersensitive, yet we should always remember that our very best men are most liable sometimes to be working under a strain, and their valuable effectiveness may be impaired for long periods, just for lack of that one touch which makes the whole world kin. The unpleasant tasks which are sometimes necessary assignments are the most prolific causes for such discontent, and consequently a salesman should be better trained in the discomforts of his job than in its more pleasant phases.

Too many salesmanagers put more effort into exploiting the profitable features of their business than the unprofitable. They concentrate effort along the paths of least resistance. They are like generals who pursue in completion of a victory and neglect the line of battle where there is carnage and loss and disaster. Victories there must be or there would be no reward for battle, but the brilliant general is he who directs his deepest strategy to points where there is the most danger—even though victory is his sweetest reward.

Willingness to pursue is not always based upon supreme courage, but it is the army which willingly resists that glorifies the successful general, and it is his tact and leadership which keeps an army at the top-notch of willing endeavor and insures ultimate success under all conditions.

Praise Is Like Wine

Therefore, the exact degree of stimulation which may be exerted through the medium of praise and recognition is indeed a problem. Praise is like wine; it is food for the invalid, stimulation for those who are moderate, but poison to those who do not know how to use it. In what manner, therefore, and to what degree should a salesmanger communicate his satisfaction to his salesman upon an individual success?

In my opinion, the direct message of praise should be quite as carefully pondered over as the message which carries blame or criticism, and praise should only be given where it is reasonably certain to inspire renewed effort and sharpen the desire for continued commendation. Each salesman's singularity should be studied in either case, and equal consideration should be given to the probable effect of blame or praise on that salesman's self-esteem.

Must Awaken and Preserve Salesman's Faith in Self

It is the task of every salesmanager to carefully awaken and preserve in all salesmen their own self-faith. A man's achievement can never rise higher than his own self-faith, and there can be no consistent success unless it is relentlessly pursued. If a salesman thinks that he can do a certain thing, it is more than half done, but so long as he has even a remote idea that he cannot do it, it is a moral certainty that he never will.

Considerable thought should be given to some method whereby a salesman may be able to gauge his effectiveness in comparison to some standard, which may either be his own quota or the quota of other salesmen. He will not then be dependent upon the written communication but will be able to take his own bearings. Thus he will find out exactly where he stands and also learn to look into himself for his own endorsement of the work which he is doing.

This is where the "Game" idea is specially valuable, because it gives the salesman a mark to aim at and brings the knowledge of his success or failure any official comment.

Qualities That Are Essential to Good Salesmanship

The namable qualities which a salesmanager must create and nurture among his salesmen are wide and varied, yet for definite purpose I will name those which chiefly form selling ability in successful salesmen:—

The accompanying article contains some extremely interesting and pointed information not only on the question of handling salesmen, but on the still broader problems of salesmanship. Every merchant is a sales manager. He must enthuse his staff, see that they render the service that will bring business to the store and keep them thoroughly in accord with his policy. The article will, therefore, have a very direct interest.

Initiative is essentially the ability to start something. Initiative gives birth to an idea or purpose. It is an independent action of some nature which neither depends for its origin upon a prearranged plan or idea.

This is the most valuable asset which a salesman can possess. It is usually born in a man, and yet it can also be acquired, and if encouraged it becomes a habit both of mind and action. At the same time initiative can be hopelessly killed in its earliest infancy if it is in any way frowned upon, and that manager is wise indeed who is ready to recognize the difference between initiative and rebellion. The first indication of initiative in a salesman is sometimes branded as a mistake. A salesman who has ability to decide quickly can afford to make mistakes because he has equal ability to quickly rectify them, and therefore if a mistake is made early in the game by a traveler who evidently had to think for himself before he departed from a fixed rule, comment or criticism from headquarters should only be made after close analysis of the impulse which prompted it. What may look like a glaring irregularity may have behind it a far bigger idea than the rule which governs the regulation circumstance.

A salesman's personal judgment is often the fund from which a salesmanager may draw for his future success, and it should be in no measure unduly restricted or destroyed. If a salesman is forced to yield always to precedent, he is taught dependency in the place of independence, his field of opportunity is immediately limited. The problems of origination are then exclusively dependent upon the director of sales, whereas the entire sales force should, in the highest sense, be the laboratory of all sales experiment.

Every man who is worth the process of engagement as a salesman may be endowed by nature with all qualities to rise to executive position. But the qualification for present fitness as a salesman, and his ultimate destiny for higher position, depends upon the one question whether he is afraid to do things, or whether he has the courage to have convictions of his own. If you hire a man who has all the earmarks of a good salesman, and before you give him a chance of self-development, you proceed to dominate him and compel him to measure only up to the standard of your own experience, you merely teach him to agree with you on all points before he dares to do his own thinking, and his consequent opinion is only a modification of your own.

Initiative then is both a heritage and an accomplishment — an exotic which may wither at a touch, but a hardy annual if it is nurtured in proper surroundings.

Ingenuity is closely allied to initiative, but may exist apart from, and in addition to, the power to create or start something. Ingenuity as applied to salesmanship may be defined as adroitness or intelligent invention in the carrying out of a task or idea. There is nothing more refreshing than a new method, either in argument or action, and in every sales force there are always men who approach things in their own way. There is much to be argued against the absolute stereotyping of sales methods and the relentless standard which is always based on precedence.

Resourcefulness differs from initiative and ingenuity chiefly in scope. Resourcefulness in salesmanship is purely the highest degree of self-reliance, and is chiefly recognized in the exercise of quick judgment to meet a contingency. Resourcefulness is another name for ability to overcome a difficulty by substitution of something in its place.

Before the present-day period of keen commercial competition, that is, in the days when road men earned the name of "Drummers," they were of course re-

sourceful salesmen, but now the traveling salesmen have spread the knowledge of merchandise values, chiefly through the standardization of branded and trademarked articles, and now also that advertising has put its seal on most products, the situation is a very different one, both in the salesman's approach and his reception, so the difficulties which salesmen now meet are the difficulties created by their competitors, and prompt measures must be decided upon to continuously meet these changes. Resourcefulness, then, is a spontaneity, an impulse most valuable and not common, it breeds self-reliance and gets business in times of famine.

Salesmanagers themselves must perforce be resourceful; it is more than half, if not the whole, of their job; and they must look closely for this quality when they hire salesmen, and above all must amply recognize it when it is evident on the firing line.

Trade Papers Commended

While in a general sense works and writings on salesmanship are entirely valueless and just so much froth, yet it is possible to collect a whole library of books on business subjects and ethical inspiration which are altogether helpful and excellent. Publishers of trade journals and technical magazines are commencing to recognize that there is a large field for circulation among the many thousands of travelers on the road. A proper investigation into the value of such will often lead to a manager's determination to put this stimulative matter within reach of his salesmen, either by house subscription for the mailing of the best trade magazines which are specially edited for that purpose, or by collection of a library of the best books on all such subjects.

I have especially in mind such a series of inspirational books written by Dr. Orison Swett Marden, which are all simply teeming with just that beautiful human touch that compels you to revel in subjects which would otherwise be very dry reading, and also full of just that inspiration toward personal efficiency which you and I would like to absorb. Dr. Marden's writings will put more spirit of purpose into a man than all the house bulletins which can be written.

Waste Paper as a Financial Asset

How the Saving of Waste Paper May be Made Distinctly Profitable—Its Method of Grading and Shipment—How the Most Satisfactory Results May be Obtained—A Protection Against the Menace of Fire.

ALMOST daily reports are being received of newspapers cutting down their pages, or in some instances, temporarily discontinuing publication, through the inability to get their accustomed supply of paper. The raw material from which this news print is made is unusually scarce, and consequently even the greatly enhanced prices that are being paid by all users of paper are not sufficient to in all instances assure them of a sufficient supply.

So serious has this shortage become that the Dominion Department of Trade and Commerce has issued the circular urging the conservation of these waste products.

It would appear, therefore, that the saving of available supplies of paper is a patriotic duty, as well as being of actual value to the individual saving.

How It Pays to Save Paper

In what does this value to the individual consist? Well, to begin with, paper, even waste paper, is a valuable commodity this year. The waste paper that you spend so much time in destroying has an actual cash value, and a very considerable value of recent date. Then there is to be considered the actual saving of time it takes, because paper cannot be gathered up and burnt without a very considerable expenditure of time and energy. One paper authority estimates that the paper that is wasted by the average merchant has an actual cash value to him of over $100, while the time wasted in cleaning up and disposing of this waste causes a loss of upwards of $200 annually. In addition to this, waste paper is the greatest fire menace there is; it cannot be left around even for a night without proving a very serious danger.

Baled Paper Not a Fire Menace

How will the saving of paper prevent this? Well, there are a number of good paper balers on the market and these are being used extensively, and have proved of great value, and not the least of their value is the protection that they give against fire. It is not always possible to dispose of this baled paper immediately after baling, and some people have held that it continues to be a menace. This is not the case, however. Paper that is one of the most inflammable of materials in its loose state becomes practically unburnable when tightly baled. Even if the edges should catch fire the smoke this would generate would itself put out the fire almost as soon as it had started.

Some Practical Questions Answered

What is this paper worth, and where can we dispose of it, and how should it be shipped? are some of the practical questions that are continually being asked. First, then, as to how paper should be prepared. A man who is baling paper for sale should make three grades:

1. Magazines and books and all bond papers. This raw material is used in making the better grades of papers and consequently it brings a better price. This grade is worth $25 a ton.

2. Newspapers.

3. Scrap paper. This consists of everything in the paper line—torn newspapers, wrapping paper, contents of waste baskets, cardboard—in fact, anything that resembles paper. These two last grades are at present selling at $13 a ton, though, as a rule, there is about $3 difference in price favoring the second grade.

Handle Waste String Separately

In this connection there is a caution that might be added. Do not include string or any type of cord in any of these grades of paper. String has to be sorted out and entails a good deal of loss of time. Not that it is not saleable, for it is worth $30 a ton, or 1½c a pound.

The method of shipment is a matter of great importance, and it is here that most merchants meet the greatest difficulty. They don't know where to ship the paper when it has been collected and they are not sure if the amount they will receive will justify the attempt.

We have mentioned the present prices, and will be glad to supply the names of reputable paper dealers in different districts on application, as anything like a complete list would be too extensive for these pages. Regarding the matter of freight and handling, there is a good deal that can be said. It is impossible to give a complete list of rates, for these vary with each place, but some instances may be given.

A Three Grade Freight Rate Illustrated

Take London, Ontario, as an example; there are three rates for this point for shipment to Toronto. These are 8½c, 20c, 28c per hundred pounds. The first of these prices is for straight car lots, the second for bales in less than car lots, and the third for bags in less than car lots. It is evident, therefore, that the bale is the advantageous way of shipping, though in straight car lots, of course, paper can be shipped in any form.

Or take another instance; from North Bay the rates to Toronto are 12c, 24c and 33c; in small shipments this would net the shipper about $8 per ton at North Bay, as against $10.60, f.o.b. the cars North Bay, for a full car load. There is a considerable difference here that is

(Continued on page 42.)

WEEKLY HARDWARE MARKET REPORTS

STATEMENTS FROM BUYING CENTRES

THE MARKETS AT A GLANCE

The closing week of 1916 has experienced the usual heavy weekly budget of price changes, all in an upward direction. All thoughts are now turned toward the New Year. Prices of many hardware lines are now at levels which were undreamed of a year ago. Buyers are becoming even more cautious since peace rumors have become more insistent. Among many price changes during the past week are advances on brass valves, tacks, furnace registers, mitre boxes, mechanics' tools, saws, skates, wrapping paper, fork and shovel handles, iron handles. Higher prices are expected on snow shovels, cut nails, fishing tackle, rules, tapes, oil stoves and heaters, lubricating oils, cabinet locks. Owing to higher costs of glue, whiting, tinting colors, etc., higher prices on calcimines are almost inevitable. A new shoe findings list has been issued and quotations are net list. Despite peace rumors, iron and steel products are decidedly firm and further advances have been scored on some steel products. There is a great scarcity of many iron and steel products and prices are quoted only on application. During the next two weeks stock-taking will be general throughout the retail hardware trade of Canada. Wholesalers usually take stock between Christmas and New Year's, when travelers are in off the road.

MONTREAL MARKETS

MONTREAL, Dec. 27.—At the close of the year 1916 the hardware trade of Montreal is looking back upon a period of intense concentration in the struggle to keep up with the upward rush of prices, and looking forward to an equally strenuous period ahead in the opening of 1917. That prices will be in no degree abated is the firm opinion of those best qualified to judge, the men right in the thick of the market from day to day buying and selling, and recording the price changes in the light of actual transactions. Even an early end of the war will hardly alter conditions for quite a long time apparently. Earnest hope that the New Year will see the end of the war and relief for all concerned from the terrific strain placed on men's bodies and minds by the battlings of nations was voiced by President Dowling, of the Hardware Association, as he made a brief mental review of the conditions of the market at the close of the old year. "We shall all welcome the end of hostilities with a sense of relief," he said, "and shall hope for a period of steadier markets, gradually settling down to normal conditions of supply and demand and prosperity accompanying that steadying influence." From other leading men in the hardware trade circles of Montreal there came views as constructive, and all seemed optimistic. "We are stock-taking," said one strong personality in the heavy metal business, "and we are surprised to find that contrary to the usual state of affairs around this time business is keeping on right up to the last moments of the year." Similar views were given by others in closest touch with the other lines of the trade. All lines have experienced brisk and right up to year-end activity, and the outlook for 1917 is still for excellent business. At this there is surprise, for this time of year has often in previous seasons been dull and inactive. This year, in spite of very high price scales, a different condition entirely prevails.

Iron and Steel Keep Steadily Firm

IRON AND STEEL.—Every indication in Montreal at the end of 1917 is towards tremendous and continued firmness in iron and steel. Even should the war suddenly end, and steel shares drop, there does not seem to be much chance of any reduction in prices of iron and steel products, because merely to catch up with demand as at present, production would have to be continued at high pressure for a year or more perhaps. The inexorable maintenance of British embargoes on all products of iron manufacture in the way of sheets, and on tin, etc., keeps the market exceedingly bare of such products as Canada plates and tinned iron plates. A manufacturer of maple syrup evaporators, who makes large purchases every December in the way of waster coke tinplate for the manufacture of tin containers for the syrup, finds that the material which in December, 1915, cost $7 per box of 112 sheets, 20 x 28, is this year costing no less than $17 per box of 112 sheets, same size. It is hard to find on the market in any considerable quantity either Canada plates or charcoal terne plates. Prices have gone up for galvanized sheets, which are no longer to be had from Britain, and quotations are all made for U. S. gauge.

Tinned Iron is Harder to Obtain

TINNED IRON.—In reference to the scarcity of tinned iron, the opinion of one of Montreal's important purchasers and wholesalers of this metal is as follows:—"The chances of getting tinned iron in the near future appear to be very remote. The British Government will issue licenses for nothing made of sheet iron, and are conserving all the output of British mills for their own purposes. We had extreme difficulty ourselves in getting license issued for the export to this side of some sheet metal which had been cut to sizes, and for that reason would have been entirely useless for any other purpose in Britain. As for our ordinary stock orders, I doubt if we can hope to get these out from Britain at all."

Galvanized Sheets Advance in Price

GALVANIZED SHEETS.—Prices in half-ton lots or over for galvanized sheets (U. S. gauge), Apollo brand, are as follows at present in Montreal:

	Per 100 lbs.
No. 16	$7.40
Nos. 18-20	7.60
Nos. 22-24	7.80
No. 26	8.00
No. 28	8.40
10¾ oz.	8.85

If the sheets are supplied packed in cases the price is 30c per 100 lbs. more,

and if supplied in bundles in less than half-ton lots, 15c per 100 lbs. extra must be paid.

These sheets are getting still scarcer on the market, and prices are in a very firm condition indeed.

Shoefindings and Tacks Increased

SHOE FINDINGS, ETC.—Amongst important smaller hardware manufactured from iron which has altered in price in Montreal since date of last report are tacks and shoe findings. The revised hardware tack list of January 1st, 1916, is subject to a new discount of 70 and 10, instead of the former 75 per cent. A new list for shoe findings came into effect on December 21st, showing advanced prices for shoe rivets, clinch point and cobblers' rivets, in steel and brass wire, heel or shoe nails, hob and Hungarian nails, Channel nails, tacks, and shoe tacks. The new list is shown in a panel elsewhere in this issue.

Shelf Goods Show Several Advances

SHELF GOODS.—The price of curry combs has advanced. The new scale is list plus 5. Rim locks have also advanced to $1.80 from the former $1.65. Some firms are still quoting globe files at 60 off. Others quote these at 57½. This line of files has been uncertain as to discount for a couple of weeks, but there is no uncertainty as to the scarcity of all files, and consequent high prices. Disston's files are being quoted at 50 off. All Sargent's goods are 25 per cent. up. Dart Unions are quoted at 44½ off. Disston's saws are subject to a general advance of 10 per cent. at least. Gauge glasses are quoted at 80 per cent. off. A shortage of drills and also of auger bits is generally felt in the trade. Candlewick is now quoted at 45c per lb.

Ammunition Has Again Advanced

AMMUNITION.—A series of advances—all previously predicted in HARDWARE AND METAL—will be found to have taken place in respect to prices of ammunition, both Canadian-made and imported from the United States. Dominion shells are changed as follows:—"Crown," 10 per cent. advance on list; Regal, Sovereign, Canuck, and Imperial all net list. For American ammunition the new terms are as follows:—Winchester loaded shells: New Rival, 50 per cent. advance on list; New Black, 50 per cent. advance on list; Repeater, 30 per cent. advance on list; Leader, 10 per cent. advance on list; Remington U.M.C., New Club, 50 per cent. advance on list; Nitro Club, 30 per cent. advance on list; Arrow, 10 per cent. advance on list.

LIST OF SHOE FINDINGS

FREIGHT ALLOWANCE:
Actual freight not exceeding 25c per 100 lbs. on shipments of 200 lbs. or over allowed from Montreal, Toronto, Hamilton and Galt.

Metals Show Some Downward Tendency

METALS.—A certain year-end sluggishness is noticed in the market for the ingot and other metals at the close of 1916 in Montreal. Copper has declined quite noticeably from $40 and $39.50 of last week to $38 and $38.50 this week. Lead is also weaker. Last week lead was at $11.25 to $11.50. This week finds lead about $10.50 to $10.75 per 100 lbs. Tin furnishes another example of the weakness of the metals at this period; quotations are $49 and $50 per 100 lbs., instead of the $51-$51.50 of last week. Zinc sheets are firm at 25c to 25½c. Spelter is unchanged at $15 and $15.25 per 100 lbs. Solder is rather weaker—tinsmiths' at 30c (1c down), and wiping solder at 28c (also 1c decline). The weakness of the market is not unusual or unexpected at this time of year.

Myers' Pumps Price Change

Amongst special lines of hardware altered in price during the past week are Myers' pumps, which are now 12½ off list.

TORONTO MARKETS

TORONTO, Dec. 29.—Shortages in many lines continue to be the most perplexing problem. The ever-changing vista of prices is another source of concern, as it means constant work on the part of the management to keep the change sheets in order. There is a feeling of uncertainty as to what the New Year may bring forth. There is a well-founded opinion that the war is pretty sure to end some time during the year. The head of one large Canadian banking house is of the opinion that the war will end within three months through the inability of Germany to feed her people. The financial condition of the enemy empires is also thought to be serious. This is pretty much speculation, of course, as there is no telling how eagerly Germany would welcome peace. There is no doubt but that it would be welcome to her if she could save her face. With cessation of hostilities there are sure to be readjustments in many lines. There is a carefulness in buying evidenced by some of the larger concerns at the present time. There has been the usual quietness of the period between Christmas and New Year's. All of the hardware travellers are off the road, and will not start their rounds until after the New Year. Trade has been exceptionally good throughout the year, and continued well up to the holiday season.

Mitre Boxes, Screwdrivers and Hammers All Advance

SCREWDRIVERS, HAMMERS.—Another advance of 10 per cent. has been announced in the price of the line of goods manufactured by the Stanley Rule and Level Company. The advances are in mitre boxes, screwdrivers and hammers, but do not include the planes and boxwood rules, advances having taken place in these articles a short time ago. A recent advance, however, is no indication that advances are not likely to follow soon after. As advances have worked out in some lines, it has been almost a weekly success.

Malleable Fittings and Bushings Are Up

FITTINGS, BUSHINGS.—An advance of approximately 5 per cent. has been made in malleable fittings and bushings, unions and plugs by the changing of the discount. Malleable fittings are now quoted at a discount of 5 per cent. off list on classes B. and C. Malleable bushings and cast bushings, on the other hand, are quoted at a discount of 50 per cent. off list. Unions now carry a discount of 55 per cent., and plugs a discount of 47½ per cent.

Stoves Continue Firm: Registers Record Advance

STOVES.—There is a continued firmness in stoves of all kinds, due to the advancing cost of raw materials and the difficulty of getting supplies for the manufacture. Manufacturers are of the opinion that it is almost inevitable that a further advance must take place. There is a firmness also in the market for gas ranges, with manufacturers finding it difficult to meet the demand. Manufacturers point out that while there has been a considerable increase in gas ranges, there is not the same margin of profit for them on a range that now sells for $33, which formerly sold for $25. Registers have made a recent advance, and are now quoted at 66 2-3 per cent. off list, as compared with 75 per cent. formerly. There is a big demand for heaters with the continued cold weather; greater, in fact, than could be supplied.

New Discount on Skates Announced

SKATES.—Following the recent announcement that skates have advanced in price approximately 15 per cent., the new discounts from lists of the Starr Manufacturing Company have been announced as 20 per cent. There is a continued shortage of all lines, with apparently no better chance of supplies. The large supplies of German skates that formerly came into this market have been cut off for good and sufficient reasons. Canadian manufacturers have found their output insufficient to take care of the needs of Canadians.

New Discount on Trowels and Crosscuts

TROWELS, CROSSCUTS.—Canadian manufacturers of crosscut saws and trowels have recently announced new prices by the changing of their discounts. One of the large Canadian manufacturers, who also make circular saws, band saws, and trowels, have announced that the discount of their lines will henceforth be 10 per cent. off catalogue prices. One of the large American manufacturers, with Canadian branches, have advanced their lines in a corresponding degree. The market for files is very firm owing to the great demand for the articles and the difficulty to obtain raw materials. One firm states they are compelled to turn down orders to the etxent of two to three thousand dozen weekly. As far as quoting of prices this firm in particular is practically off the market. They are endeavoring only to look after the interests of their customers and make their supplies go as far as possible.

Yankee Drills and Push Braces Advance

DRILLS AND PUSH BRACES.—Another advance of 10 per cent. has been recorded in all lines of goods manufactured by North Bros. This follows a recent advance of a like amount. The lines include Yankee drills, screwdrivers and push braces. Manufacturers are confronted with a serious problem to get supplies of steel for their various lines. Most of the large steel mills of the United States have their output sold for the entire year of 1917.

Wrapping Paper Goes Upward 1c Per Pound

WRAPPING PAPER.—An advance of 10 per cent. has been recorded in the price of Kraft wrapping paper which now makes the selling price 11c per pound as compared with 10c formerly. Paper mills have been advancing their prices steadily during the year and all lines have gone to higher levels. There have been particularly heavy advances in pulpboard and strawboard for the manufacture of boxes, and kraft paper has followed upward in the general advance.

New Sisal Prices Will Make High Binder Twine

CORDAGE TWINE.—New prices for the sisal fibre have been announced by

the Regulating Commission representing the Yucaton growers of Mexico, which provide for an increase of 4½c per pound over recent quotations for the fibre. About ten days ago the commission announced their price for the fibre as 13½c per pound and during the past week a further advance of 1c per pound has been recorded. While prices of sisal rope at the time of writing had not advanced they were expected in the near future. It is anticipated further that prices for manila rope will go up in sympathy with advances which are almost inevitable in sisal. It is pointed out that the prices for binder twine to garner next season's crop will necessarily be very high in the face of the high price for the raw fibre. On the present basis of the fibre it is expected the price of binder twine will be somewhere in the neighborhood of 15 to 15½c. For the past season the price of binder twine was 9⅞c per pound. From that it will be seen that it will in all probability be from 5c to 6c per pound higher than last season. Prices have been withdrawn on African hemp rope by some of the jobbers as the manufacturers are no longer making that brand of rope owing to their inability to get supplies of raw material.

Perfection Oil Stoves and Heaters to Advance

OIL STOVES, HEATERS.—The lines of stoves and heaters carried by the Imperial Oil Company are due for an advance about the first of the New Year, according to information received. The amount of the advance has not yet been definitely stated but it is understood the advance on Perfection oil stoves and heaters will be not less than 10 per cent. and probably more. The concern has found it difficult to get the raw materials for the manufacture of these goods, and that which they have been able to secure has been at greatly enhanced prices. The company is filling orders which are now on their books at present prices but they are not accepting new business at the old figures. It is anticipated the new prices will be announced by next week.

Advance on Curry Combs Now General

CURRY COMBS.—The advance in curry combs has been made general by all wholesalers and they are now quoted at 5 per cent. advance on list prices. It was announced in HARDWARE AND METAL last week that some of the jobbers were still quoting at net list while others were selling at 5 per cent. advance of the list. There is a continued firmness in this market in common with all other steel goods.

New Shoe Finding List Has Been Issued

SHOE FINDINGS TACKS.—In a panel elsewhere in this issue will be found the new list on shoe findings and tacks. This advance was announced in these columns last week but at the time of going to press the new lists had not been issued. The new discount on tacks is now 70 and 10 as compared with 75 formerly. Capped goods are also quoted at 70 and 10 per cent. off list. The new lists on shoe findings provide for an advance of approximately $1.50 on nails and $2.25 on tacks.

Lubricating Oils Will be Marked Higher

OILS.—New prices on lubricating oils of all kinds have not been announced at the time of writing but it is expected they will be ready very shortly after the first of the New Year. As announced in HARDWARE AND METAL last week an advance was due in these products owing to the increased price of crude oil. During the past week there has been a further advance of 10c per barrel in the price of Mid-Continent crude which now makes the selling price $1.30. Within the past month there has been an advance of 40 cents on crude oil. Prior to November 29 crude was selling at 90c per barrel and on that date was advanced to $1. Further advances in crude have taken place on December 12, 18 and 23. This makes the advance in the month approximately 1c per gallon on the crude. Production has been greatly curtailed in the oil fields and consumption has continued heavy.

Metal Markets Are Slightly Easier

Following peace rumors the metal markets have been rather unsettled and prices in the United States have declined in some instances. Business is good, despite the usual holiday quietness.

There is a good demand for copper and the price has declined slightly, with 37 to 38½c being quoted. Tin is also easier and is quoted locally at 46-47½c lb. Spelter is quoted at 14-15c. The lead market although dull is still holding at former levels. Locally the price is 9½c lb.

Antimony is unchanged at 18c lb. and aluminum at 68c lb.

Prices on domestic pig iron are still withdrawn, and no information is available as to when new quotations will be issued. Stocks of foundry iron have been exhausted, and Canadian furnaces have no pig iron of this grade to sell. The market is quiet, with the situation unchanged. In the United States the pig iron market is also quiet, with prices unchanged.

The iron and steel markets in the United States are on the whole decidedly quiet, due partly to the peace proposals and also on account of the holiday season, the market being usually quiet at this time of the year. There is no sign of weakness in prices, and none is expected in the meantime. The transportation situation appears to be growing worse, and, if there is no improvement in the near future, it will result in the mills curtailing production.

Iron and Steel Have Recorded Advances

IRON AND STEEL.—Advances in common bar iron, refined iron, mild steel, band steel, tire steel, toe calk steel, mining tool steel, and spring steel have been recorded during the week. Common bar is now selling at $3.65 to $3.75 per 100 pounds, refined iron at $4.15, tire steel at $3.95, toe calk steel at $4.50, mining tool steel at 14c per pound, sheet cast steel at 23c per pound and spring steel at $5.50 per 100 pounds. Reeled machinery steel is practically off the market and cannot be obtained. There is a continued firmness in the market and will no doubt continue so until some prospect of peace is more definite. There is a feeling that the end of the war may not be such a great distance off by some men who usually are conservative in their statements.

Globe, Angle and Check Valves Are Up

VALVES.—There has been an advance of approximately 7½ per cent. in the price of the Jenkins globe, angle and check valves by the changing of the discount from 20% to 15% on the standard grade. Gate valves have had the discount changed and are now selling at 20 per cent. off list as compared with 25 per cent. formerly. Iron body gate and globe valves are now quoted at 40 per cent. off list as compared with 45 per cent. formerly. The Jenkins pattern of globe, angle and check valves are now quoted at 45 per cent., the former discount being 50 per cent. Ground work valves have changed from 50 per cent. off list to 45 per cent. off list. Steam cocks for standard are quoted at 53 per cent. off list and high grade of the same are quoted at 50 per cent. off list.

LONDON MARKETS

LONDON, Ont., Dec. 28.—Hardware prices continue to advance, and the end is not yet in sight. It is felt, however, that on a good many lines the limit will soon be reached. Prices on some lines are at a dangerously high level. Local hardware merchants state that the Christmas trade this year was the heaviest they ever experienced. Prospects for 1917 business are very bright, and retailers are booking freely but cautiously for spring deliveries. Wholesalers have been stock-taking during the week. Some retail firms have already started stock-taking, but the majority will start at the first of the year.

New Discounts Quoted on Handles

A new discount of 25 per cent. has been announced on fork, hoe, rake, shovel, manure fork and post-hole handles for the second growth quality. On extra quality the discount is 35 per cent.

Tacks Advance About Ten Per Cent.

Tacks are now quoted at 70-10 per cent., an advance of about 10 per cent. over previous quotations. New net prices on some of the best selling lines are as follows:

Tinned carpet—6-oz., 50c doz.; 8-oz., 64c doz.; 10-oz., 77c doz.; 12-oz., 90c doz.

Blued carpet—6-oz., 43c doz.; 8-oz., 54c doz.; 10-oz., 65c doz.; 12-oz., 76c doz.

Cut tacks—3-oz., 28c doz.; 4-oz., 35c doz.; 6-oz., 45c doz.; 8-oz., 57c doz.; 10-oz., 69c doz.; 12-oz., 81c doz.

Shoe Findings Advanced

A new list on shoe findings has been issued, and is shown in a special panel elsewhere in this issue. Quotations are net—no discount being allowed from the new list. The advance amounts to about $1.50 per 100 lbs. on shoe findings, and $2.25 per 100 lbs. on shoe tacks.

Nails Remain Firm

Wire nails remain firm and unchanged at $4.70 base. There is a feeling that wire nails may still reach higher levels. Cut nails are unchanged at $4.25 base.

Iron Handles and Clothes Line Higher

Galvanized clothes line wire has advanced, and is quoted as follows:—No. 19XX, $4.75 per 1,000 ft.; No. 18XXX, $5.25 per 1,000 ft.

Iron handles have also advanced in price. Mrs. Potts' handles are now quoted at $1 doz.; Universal handles are quoted at $1.40 doz.

Net Prices Spades and Shovels

The advance in spades and shovels was announced in last week's issue of HARDWARE AND METAL. It had been predicted by HARDWARE AND METAL for some time prior to becoming effective. Lists and discounts are shown in current quotations. Net prices on some lines figure out as follows:

First quality, Jones and Bull Dog, spades and shovels, $11.62 doz.; second quality, Burns, $11.23 doz.; fourth, olds and Fox, $10.10 doz.

Snow Shovels to Advance

Snow shovels are said to be next on the list for an advance in price.

Rope and Twine Very Firm

Prices on Manila and sisal rope remain very firm, and further advances, particularly on sisal, can be expected. The outlook for the first half of 1917 is for high price levels. Pure Manila is quoted at 25½c base; British Manila, 21c base; African hemp, 21c. Cotton rope, 3-16 in., is quoted at 41c lb.; cotton, ¼ in. and larger, is quoted at 39½c lb.

Paint Products High in Price

White lead in oil is only in fair demand. It is felt in some quarters that the high price is seriously affecting the demand. There are a few in the trade who feel that the price of lead should not be so high. However, the high cost of pig lead and linseed oil are bound to have the effect of keeping up the price. Pure lead is quoted at $14.45 per 100 lbs. in ton lots, and $14.75 per 100 lbs. in less than ton lots.

Turpentine is unchanged at 81c per Imp. gallon in single barrel lots; 80c per Imp. gallon in 2 to 4 barrel lots; 88c per Imp. gallon in 5-gal. lots.

Linseed oil remains steady and unchanged at the following prices:

	Raw.	Boiled.
1-2 bbls.	$1.15	$1.18
3-5 bbls.	1.14	1.17
6-9 bbls.	1.12	1.15

Calcimines to Advance

Owing to the high cost of glue, whit-

—From Vertical Farming Magazine.

ing and tinting colors, it is expected that new and higher prices will shortly go into effect on calcimines.

WINNIPEG MARKETS

For reasons unknown at the time of going to press the Winnipeg market report did not come through. This is a very unusual regrettable occurrence, but in order to have the paper in the hands of readers on schedule time, the paper is going to press without the Winnipeg report. Westerners will find much valuable market information in the Montreal, London and Toronto report.

Selling by the Sample

How Small Wares Sell Themselves—A Loop Hole for Competition—Utilizing the Silent Salesman Idea—New and Complete Samples Needed

OF course the bulk of a hardwareman's trade is built up on the heavier lines of goods. In these lines he is open to competition only from those of his own trade with whose circumstances he is more or less familiar, whose methods of trade must in most ways approach his own.

But in the sundries of the trade, the thousand and one small wares that go to make up the hardware man's stock, he is open to competition from all sources. Many different kinds of stores stock some of these goods. The large mail order houses stock them all, and here he meets with a competition he is not so well fitted to meet.

Now the volume of business these small wares run into in a year may not seem very formidable, but it shows a very fair percentage of profit indeed, and considering the investment involved is probably one of the best paying elements in the hardware business.

The average hardwareman is apt to take these little elements of his trade for granted. He works hard at selling paint and tools, stoves, and heavy ware, but those little lines, the thousand and one little contributions to the hardwareman's stock, are left mainly to take care of themselves. If people want them they will ask for them. That is the general attitude of many hardware merchants—But they won't—that's the truth of the matter; and here is the loophole that has been left for the smaller stores and the mail order house to encroach on the hardwareman's preserves.

Things Not Asked For

"And why won't a man ask for something if he wants it?" This question was put to one of the staff of J. W. Bennett & Co., Gananoque, Ontario, who had suggested this idea—"If a man wants a thing and knows you have it, why won't he ask?" The answer was prompt: "They don't ask for it because they don't know the article by name; they may be sure you will have it, but not knowing its name, and having only a vague idea of how to describe it they won't ask for it. It's too much bother to explain. That's the idea that is behind the loss of many sales."

"I've known lots of people like that," he continued. "They want little things. Most men do a lot of tinkering about their homes, and they know pretty well what they want, too, but they don't know their names and they're not sure enough about them to describe them satisfactorily. So, often, instead, they drop into departmental stores where the things are laid out on counters or order them through mail order catalogues. Why? Because the thing is there before them, they can pick it out, without any confused explanation or any admission of ignorance."

Where Seeing Means Buying

Of course, most hardware stores have methods of displaying these goods. The methods are often antiquated and the display often incomplete. It may have been a pretty good display when the stock was new. Perhaps some clerk in a hurry has removed the sample to fill an order, others have followed, till many of the drawers are sampleless. They have lost the major part of their selling force. Selling without samples makes easy sailing for your competitor. These smallwares need constant pushing. It is impossible to push them all, but it is at least possible to let them speak for themselves.

Keep your samples new and bright looking and complete. Take a leaf from the department store selling methods. Keep your samples where your customers' eyes can see them, so that instead of saying, "Give me so and so," they can say, "Give me that." That is the essence of silent salesmanship: To let your samples do your selling for you.

HONESTY FIRST

The first thing in business is to do it honestly, writes H. S. Cooper in *Inland Storekeeper*. One honest dollar will last longer than two dishonest ones.

Don't let pleasure interfere with your business. I am at my post six days in the week. I don't take off as much as one week in 12 months. I go to church every Sunday and wont sell goods on Sunday.

November, 1907, I bought about $28 worth of goods from the Clifton Forge Grocery Company, and now am carrying nearly $4,000 worth; and have a small, well-built store house, good Detroit Automatic scales, and gasoline lights.

I am situated in a farming district and do a credit business, and find that my heaviest buyers buy on time. I don't think it business to sell any one that a person don't know whether they are honest or not and have not got property so that a person could collect by law.

I sell at small profit and make quick sales, and don't keep anything and let it get shelf-worn. I get rid of old goods at some price and get new goods that will sell.

I believe in trying to take care of the pennies, being kind to all if you can.

Don't sell to one man for 90c, and to another for 85c, or $1. Be a community booster. Go after business as though you meant to get it but first of all have honesty as your platform.

Will close as you will tire of trying to read my experiences. Hope this will be the means of helping some one. Some claim that a person can't do an honest business and make a success.

With best wishes for the *Inland Storekeeper* and its readers, I will ring off.

CONSTRUCTIVE SALESMANSHIP

The dealer who doesn't cultivate the acquaintance of travelling salesmen who call upon him is overlooking a bet.

The salesman that is worth his salt is more than an order taker. He is an idea incubator. He travels from store to store, from garage to garage, observing, thinking, gathering "good stuff" as a bee gathers honey.

He can tell you what the other fellow is doing to make two sales grow where only one grew before.

Next to selling goods for his house, the great function a knight of the road performs is that of service to the dealers to whom he sells. Helping them to select from his line each article in quantity proportionate to the probable demand; suggesting ways of displaying the goods effectively on shelf, counter or in window, are but two of the ways the wide-awake salesman can make himself useful.—Auto Suggestions.

EVENTS IN THE TRADE

Fire Losses

Summerside, P. E. I.—Brace McKay Co., Ltd., hardware dealers, have suffered damage by fire.

Winnipeg.—The Dowd Hardware Co., owned by J. A. Dowd, Corydon Ave., Winnipeg, suffered a loss of about $2,000 by fire last week.

Open Toronto Branch

Toronto, Ont.—John Bertram & Sons Co., of Dundas have opened a sales office in the C.P.R. building. The Toronto staff will represent also Pratt and Whitney Co. of Canada.

Son Killed at Front

C. W. Clarke, hardware merchant of Brechin, Ont., received word recently, that his son, Signaller Milton O. Clarke, was killed in action on December 1. Prior to enlisting Signaller Clarke was employed by the Holmes Electric Co., Toronto.

Sarnia Plant Sold

The plant of the Canadian Woodworkers, in the Northern section of Sarnia, has been sold to the H. Lougheed Machinery Company, who expect to have it in operation within a few weeks. The Woodworkers' plant was constructed three years ago, of concrete and steel.

New Broom Supply Co.

London, Ont.—A broom supply company has purchased the old buildings of Geo. White & Sons, and will carry a stock of broom corn and broom makers' supplies. The concern will be capitalized at $75,000, with a Dominion charter and headed by J. N. Ketchersid, president of the State Bank, of Hope, Kansas; George W. Ralls & Co., wholesale broom corn merchants, of Wichita, Kansas; and P. C. Ketchersid, broom corn, Wichita, Kansas, and W. H. Thornton, former hardware merchant, of this city.

Dominion Incorporations

Forgings, Ltd., capitalized at $100,000, head office, Toronto, to carry on the trade of iron masters, steel makers, etc.

Standard Stampings, Ltd., capitalized at $45,000, head office, Toronto, to carry on the business of stampers, founders, metal workers, etc.

Atlas Metal & Alloys Co. of Canada, Ltd., capitalized at $50,000; head office, Montreal, to carry on the business of metal workers, machinists, etc.

The Spencer Heater Co. of Canada, Ltd., capitalized at $500,000, head office, Toronto, to manufacture and deal in boilers, heaters, furnaces, etc.

Cluff Ammunition Co., capitalized at $500,000, head office, Toronto, to manufacture and deal in all kinds of ammunition and explosives.

The Castle Mfg. Co., capitalized at $100,000, head office, Toronto, to take over the business of the Castle Mfg. Co., and to manufacture toys, sporting goods, novelties, etc.

Business Changes

Winnipeg, Man.—Osborne Hardware Co., have discontinued.

Vancouver, B.C.—Vancouver Sporting Goods Co. have sold their stock to L. G. Fraser.

Lanigan, Sask.—Roycroft and McGregor, hardware merchants, have dissolved.

Galahad, Alberta.—T. Watson & Co., have sold their hardware stock to F. C. Ansell.

Dilke, Sask.—H. S. Belcher, hardware merchant, has sold to J. A. MacIntyre.

Laura, Sask.—J. C. Gordon, hardware merchant, has been succeeded by Robt. A. Ross.

Drinkwater, Sask.—J. A. Anderson, hardware merchant, has sold his branch store at Hearn.

Shaunavon, Sask.—Roycroft and McGregor, have dissolved. Robt. Roycroft continues the business.

Imperial, Sask.—Bradshaw & Anderson, hardware and implement dealers, have dissolved partnership.

Shaunavon, Sask.—Roycroft & McGregor, hardware, have dissolved partnership. Robt. Roycroft continues.

Hamilton, Ont.—The Consolidated Hardware Mfg. Co. have sold their assets and are giving up business.

Winnipeg Notes.

Stanley Morse, of the Miller-Morse Co., Winnipeg, has been spending a few weeks in the South, but is expected back in Winnipeg for New Year's.

William M. Crawford, sales manager of the Sheet Metal Products, Winnipeg, has been to Calgary, and is expected East following his return to Winnipeg.

Canada Dry Cells, Limited, Winnipeg, have added 5,400 square feet of warehouse floor space to their factory plant, which has been made necessary by large expansion of their business.

L. R. Baker, vice-president of Canada Dry Cells, Ltd., Winnipeg, leaves for Eastern Canada in the second week of January. He will visit Toronto and American points on a buying trip.

F. C. Carman, who has been travelling in the West in the interests of Canada Dry Cells, Ltd., and the Interstate Electric Novelty Co., is travelling to Toronto for a salesman's convention of the latter company. He will return West about Feb. 1, when he will start on his semi-annual trip to the Coast.

Starretts Remember Employees

A notice sent to the employees of the L. S. Starrett Co., Athol, Mass., reads in part as follows:—

We take pleasure in informing you that at a meeting of the Directors of this company held the thirteenth instant it was voted to pay as soon after the first day of January next as practicable, to each person in our employ on that date, a percentage of the entire amount of wages paid to each employee during the year 1916, this percentage to be determined by the length of time each one has been in the continuous employ of this company, as follows:

To employees who have been with us one year or less, two per cent.

To employees who have been with us continuously over one year and less than three years, three per cent.

To employees who have been with us continuously three years and less than five years, four per cent.

To employees who have been with us continuously five years or over, five per cent."

Personal

A. E. Carmichael, Winnipeg, has been appointed representative in the West for George Sommers and Co., wholesalers, St. Paul, Minn.

William Starke, of Starke, Seybold, Ltd., Montreal, is making a good recovery from his recent rather prolonged illness, and many friends in the trade circles, in which he is a popular figure, are glad to hear it.

F. M. Mooney, chief analyst for McArthur, Irwin, Ltd., Montreal, has just returned from a visit to Great Britain, France, and Switzerland, where he spent over a year and a half in the interests of his firm in connection with the dye

situation. The firm is engaged in remodeling the laboratory, and with it the executive offices of their establishment, much to the future convenience of the staff.

Winnipeg Jobbers Change Name to Great West Electric Co., Ltd.

One of the largest electrical jobbers in Winnipeg will henceforth do business under a new name. Early this year, Mr. Mainer retired from the management of the Mainer Electric Company, since when the affairs of the company have been in the hands of Mr. J. C. Smith. Mr. Smith was previously identified with the company as assistant manager.

During the past year, the company states, the business has grown rapidly, despite the depression in building, on which many electrical firms are dependent. It was thought that the time was opportune for adopting a new name, and the Great West Electric Co., Ltd., was chosen. The change of name was coincident with a large increase to the premises. This company now occupies the whole floor of the Hammond Block. The space is now being used as offices and showrooms.

There is no change in the character of the business. It is a purely jobbing concern, no business being transacted with the consumer. With their increase in floor space, more room will be allowed the shipping department.

Death of W. Doyle

Quebec, Que.—W. Doyle, wholesale and retail hardware merchant, died here.

STANLEY WORKS HOLDS CONVENTION

Forty-five salesmen of the Stanley Works met at the factory at New Britain, Conn., Monday, December 11, for what proved to be the most interesting annual sales convention the Stanley Works has ever held.

The convention was called to order by G. P. Hart, president of the Stanely Works, Monday afternoon. He welcomed the men in the name of the company, and outlined the conditions which have surrounded the production and sales of Stanley Works' products during the year just closed. Following him the men from various sections reported on the business conditions in their territory, and the business outlook for 1917.

Monday evening the salesmen were entertained at a minstrel show and dance given to them by the office force. Incidentally, it might be interesting to know that in the New Britain office there are employed one hundred and ten men, and one hundred and twenty-three women.

Tuesday morning, manufacturing problems were discussed under the direction of C. F. Bennett, second vice-president. Improvements to the line were suggested and new goods about to be added were described.

The advertising policies of the company, and the 1917 Stanley Garage Campaign was the subject of Wednesday's discussion, led by A. H. Dessau, advertising manager.

A. Zimmerman, sales manager, conducted the programme on Thursday, at which time details of various sale problems were discussed and gone over in detail.

A. C. McKinnie, assistant sales manager, spoke about the Stanley Works' Three Butt Campaign and the publicity being given to the three butt idea in gaining the co-operation of the hardware trade, contractors, carpenters and architects.

National Service Week

EVERY MAN IN CANADA WILL HAVE A CARD TO FILL OUT SOON

National Service Week is drawing very near and the fact that the first week of the New Year bears that title is something in which everyone in Canada has an interest. The men are interested because it is obligatory upon each of them, between the ages of 16 and 65 years, to fill out one of the cards which the Government is sending to them through the Post Office authorities. The women are interested because their co-operation is being invited, in seeing that their men-folk attend to this important duty. The children are interested because their school teachers have explained to them the meaning of National Service and the way in which father and the big brothers at home have to reply to the various questions.

To write in the answers and return the card promptly is a good New Year's resolution for every man throughout the Dominion, and it has the advantage of being easy of fulfilment. It only means a few minutes' careful thought.

National Service means that we are to get into that frame of mind which will cause us to think of the needs of the country, to realize that the interests of the State have a greater claim on us than our self-interest. This applies to everyone, from the highest in the land to the lowest.

There are many ways of serving the nation besides going to the front. The man on the farm and the mechanic in a workshop may be serving the nation as usefully as the man in the trenches. Every man should be doing the work which represents his most efficient service to his country.

HARDWARE LETTER BOX

Gas and Gasoline Sad Irons

W. H. Goodhue, Ridgetown, Ont.—Kindly advise us where we may buy natural gas irons and gasoline sad irons.

Central Flatiron Manufacturing Co., Johnson City, N.Y., and McClary Manufacturing Co., London and Toronto, have lines of the natural gas irons. Taylor Forbes Co., Guelph, Ont., manufacture a gasoline sad iron.—Ed.

Acetylene Reading Lamps

Enderby Hardware Co., Enderby, B.C.—Will you kindly let us know the name of concerns handling acetylene reading lamps?

Siche Gas Co., 10 Lombard Street, Toronto; W. L. Foster, 8 Lombard Street, Toronto.—Ed.

Shingling Machines

George Taylor Hardware Co., Cochrane, Ont.,—Kindly give name of a manufacturer or distributor of shingling machines.

A. R. Williams Machinery Co., Toronto.—Ed.

Clinton Motor Truck

A. E. Holmes & Co., Port Arthur, Ont.—Please give us the address of the Clinton Motor Truck Co.

Clinton Motor Truck Co., Clinton, Ont.—Ed.

Window Display Fixtures

A. D. Cross, Port Colborne, Ont.—Will you please inform me where wood or glass window display fixtures and stands can be obtained?

Taylor Manufacturing Co., Hamilton, Ont., Clatworthy & Son, Toronto; Dale Wax Figure Co., Toronto, Jones Bros. & Co., Toronto, Oscar Onken Co., Cincinnati, Ohio.—Ed.

Whitman & Barnes Calendar

The Whitman & Barnes Mfg. Co., Akron, Ohio, and St. Catharines, Ont., has issued an attractive 1917 calendar which is being sent out to the company's customers and friends.

WHAT OTHER PAPERS SAY

WHO ARE OPPOSED

From *National Bulletin.*

When the National Retail Dry Goods Association anounced itself as opposed to the Stephens Bill, an attempt was made by certain city dailies to show that this voiced the sentiment of retailers in general. The sentiment is so absurd as to need no discussion here.

We have always contended that the Dry Goods Association was of the microscopic order, so far as membership was concerned. It is even smaller than we thought in light of recent reports. While exact figures are not given, its membership is reported at less than a hundred department stores, and even these are far from being united in their opinion, and do not represent the sentiment of some of the most representative in that line; for instance, John Wanamaker, B. Altman & Co., Gimbel Brothers, J. McGreery Co., Bloomingdale Bros., Shepherd-Norvell Co., and Lamson Co., of Toledo, are all in favor of the Stephens-Ashurst Bill.

At the present time the opposition to the proposed legislation seems to simmer down to a few trading stamp and premium houses. R. H. Macey & Co., of New York, and Marshall Field & Co., of Chicago.

Concerning the standardization of the fair prices, Eldridge Reeves Johnson, Pres. Victor Talking Machine Co., says that the sole aim and purpose of the Stephen's Bill is simply a getting away from the selfish and ruinous customs which pervade retail trade.

With reference to price cutting he says: "The reactionary character of such policies becomes apparent on the slightest thought, but laws and decisions which are so framed as to deprive trade of all the benefit of cooperation, to strengthen the grip of price cutters and sweating practices, that have the effect of increasing the cost of production and forcing down the compensation to both labor and capital, are still urged by a misguided but powerful class of legislators, both national and state.

"Of course, the real trouble is the lack of public understanding and support in fair trading, and this difficulty can only yield to constant effort in the matter of analyzing and explaining the truth to the public.

"Fair and remunerative prices must necessarily accompany any lasting prosperity. Prosperity based on high prices is always of short duration. The world will be much better off when some system of co-operative trade agreements becomes the universal practice, as certainly it must sooner or later."

WHAT THE RAILWAYS FACE

From the *Boston Transcript.*

The railways of the nation are to-day facing another governmental investigation. Unlike previous probes, however, the purpose of the one ahead is not punitive, but constructive. Present conditions cannot continue if the railways are to keep pace with the growth and development of American enterprise. Railway receiverships will be multiplied very rapidly unless relief is soon forthcoming. No temporary measures will suffice. Radical organization must either be permitted or compelled. The form it shall take is the chief question before the Joint Committee of Congress which has begun an investigation into the causes of the chaos in the railway world to-day.

At both ends of the Capitol an influential group of legislators are advocates of Federal ownership of all interstate railways. Their numbers have increased and their recruits come from both parties and all sections of the country. To defeat their proposal a fairly united opposition must be mustered. It can only be united upon a program affording adequate relief. We hope the opposition will subordinate political and personal differences and come forward early in the next session of Congress in favor of the Federal incorporation of railways as the best solution of the whole problem. The Congress which passed such a bill and the President who signs it will have the satisfaction of knowing that they have rendered national service of a high order.

DETERMINATION—SUCCESS

The American Grocer.

These fall days bring to mind our Puritan forefathers—that small band of determined men. Narrow, if you will, in their views—but with a will as firm and a determination as unyielding as the rockbound coast on which they landed.

Poorly equipped in the goods of this world—yet calmly facing the threatening front of an entire continent—steadfastly winning a home for themselves and those to follow—what clearer proof is there of the sterling worth that underlies the true American character?

We speak in admiration of great canals dug—bridges built, yes, of the winning of the west itself—yet when we compare the motives behind them to the high ideals, ironbound will and determination that carried this little band of men and women on to success, they sink to insigificance.

We inherit their characteristics. No one could be better equipped to achieve success. Still success does not drop in our lap like an over-ripe plum. It is the result of hard work and still harder study.

Foresight is necessary to success, but we can only utilize this foresight by measuring it with the gauge of the past—only achieve our goal by drawing on the inspiration and knowledge gained by experience.

Our heritage from the Puritans is a character of determination—our privilege, the right to be successful. So this is our task—to hew out a successful business from the unlimited opportunities that are daily presenting themselves. But we must be able to recognize them when they appear for they are apt to be on their way in high gear and we only see them disappear in a cloud of dust past the sign.

INVENTORY.

Another year is here at hand,
An old year passing out;
And it is time to figure and
To sort of look about;
It's time to balance up the score
And square yourself again
With all your trade, and — what is more—
With all your fellow men.
It's time to figure profit, loss,
The business of the year—
If it was only hoss and hoss
Or showed a little clear.
But there's one reason, only one,
For taking such a view—
It's not to change the thing that's done,
But learn the thing to do.

* * *

So take an inventory now
Of stock upon the card,
Of book accounts, and loss allow
For cases that are hard;
Sit down and figure for a while
And learn your present state—
Amount of paint cans in the pile,
The cost of same, and freight,
The value of the furniture
From desk to water tank,
Your motor trucks, your horses, your
Condition at the bank—
Count everything that you can see,
From low to highest shelf;
Then figure very carefully
The value of yourself.

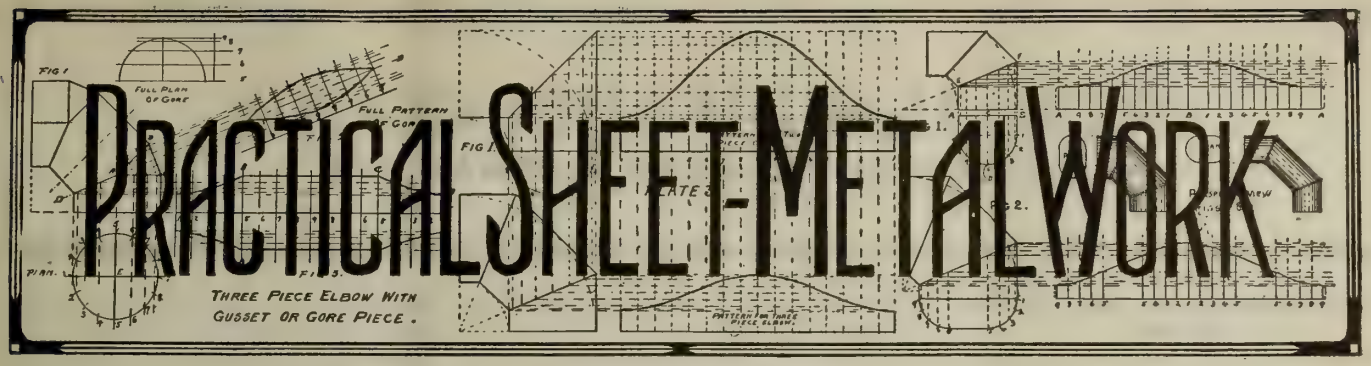
Douglas Mallock, in
American Lumberman.

"DOMINATION" OF THE SEA

The Frankfurter "Zeitung," discussing the possibilities of peace as the result of a conference to be held at The Hague next month, says among other things that by international agreement there may be a reduction in the building of naval vessels. But, it says, "if German shipbuilding is to be restricted in the future, other naval powers, including the United States, must do likewise. Great Britain must recognize the sea as a free route for all nations and must renounce domination and the British idea that Great Britain has a sole right of policing the seas. The regulation of sea traffic might properly be under international organization."

Now, assuming that there is to be such a thing as an international agreement for preserving peace, with an effective tribunal for settling disputes, there will be no occasion for "policing the seas" or for the "regulation of sea traffic." Great Britain has built up its great navy because of the widespread Empire and trade which it has occasion to protect. It is to protect it only from attack in case of war. It has always maintained that the sea should be "a free route for all nations," and has never in time of peace interfered, or shown any disposition to interfere, with its free use.

That it should have a domiating power in case of need was only the requirement of what it had to protect from attack when war prevails. It has never assumed to regulate sea traffic in time of peace, more than it could be done by the power of competition, and Germany met no obstacle in building up her merchant shipping. Navies do not regulate traffic and sea routes are always free in time of peace and cannot be controlled by any one nation. With assurance of peace they will be safe. Without that assurance Great Britain is not likely to give up the power to protect its own domain.



POINTS WORTH CONSIDERING

From *American Grocer.*

Be careful how you joke with customers whose sense of humor is an unknown quantity with you. Some people have no sense of humor and, take offence at a joke.

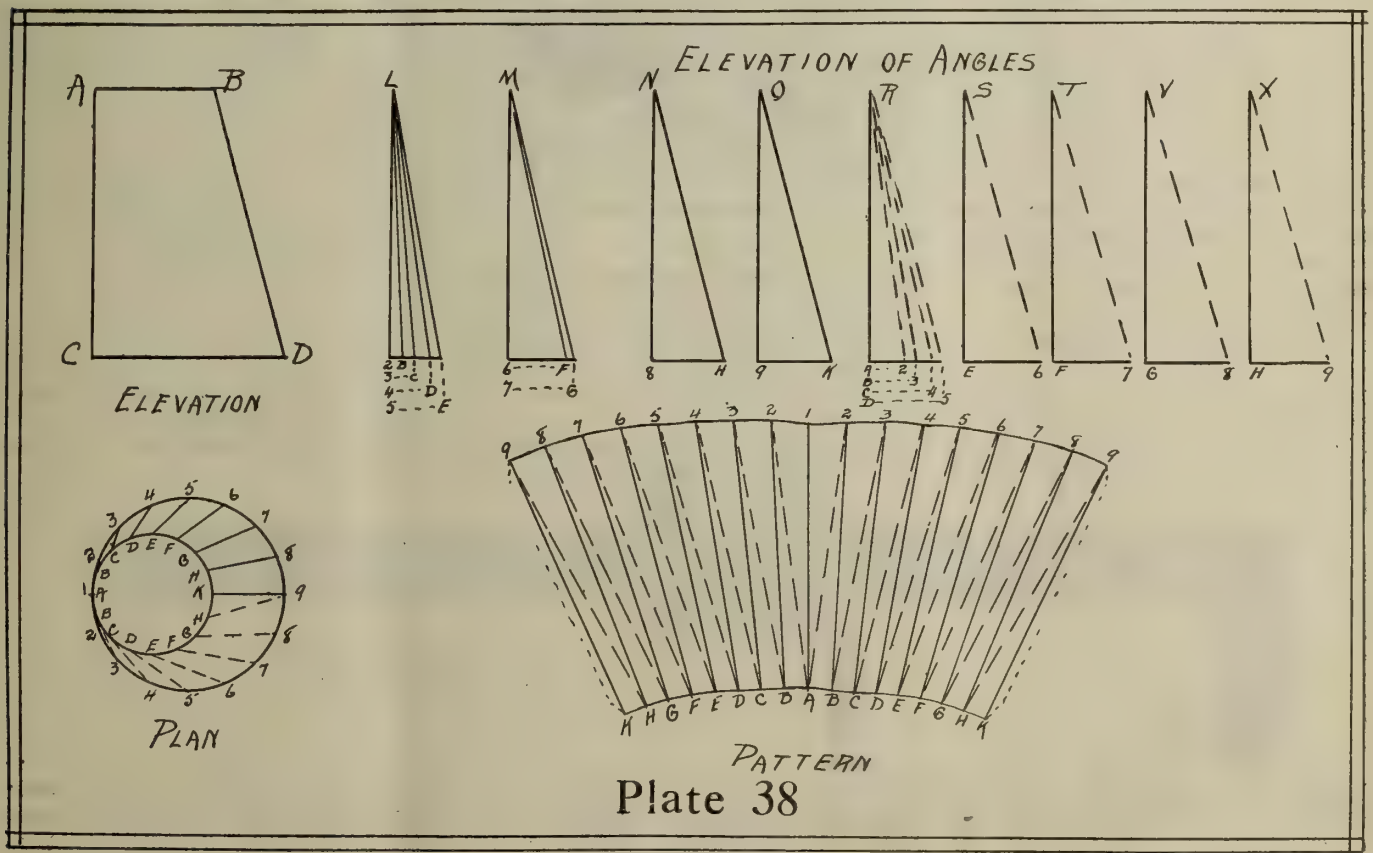
It is not good salesmanship to sell people goods they do not want just because you are able to do it.

The merchant who cares more about making sales than about being honest is preparing for a rapid slide into commercial oblivion.

BY THOMAS STANFIELD

IN this issue is shown a flaring article round in plan at top and bottom, but with one side in elevation square with ends, as shown by A-C-D in elevation.

The first step is to draw plan with two circles, divide both circles in plan into the same number of equal parts as shown by 1-2-3-4, etc., and A-B-C-D, etc., in dividing the two circles start at the end of diameter on inner circle which is parallel diameter on outer circle. Then draw lines, joining these divisions as shown by 1-A-2-B-3-C-4-D-5-E, etc., and with these distances as bases and with straight height of elevation at A-C as an altitude form the angles shown at L-M-N-O.



The pattern could not be laid off with angles derived from lines as above described, as it is necessary to form another set of angles; the base lines of these are drawn so as to join the ends of two adjoining lines drawn from division points, as shown by dotted lines joining 9-H, 8-G, 7-E, 6-E, 5-D, 4-C, 3-B, and 2-A.

With these lines as bases and same altitude as described above, from angles as shown at R-S-T-V and X. To lay out pattern 1-A, making it equal to A-C on elevation, this gives us points 1 and A shown on plan.

To obtain the next point on either top or bottom of pattern it is necessary to work from 1 to B as a base on plan or from A to 2, as shown in the connecting or dotted line from A to 2.

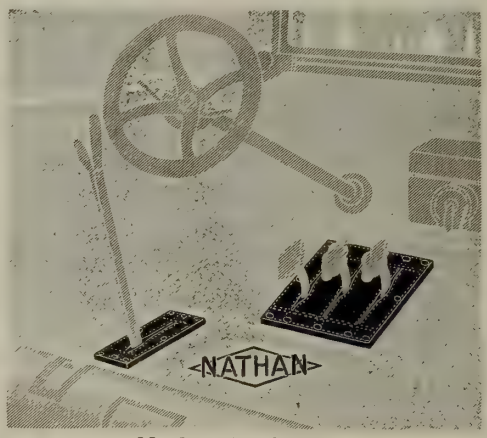
Now take distance R-2 and angle formed with A-2 as a base line, and with point A in pattern as a centre, draw an arc near point 1, with one division of plan of base as a radius, as 1-2; then draw an arc from point 1 on pattern intersecting one drawn from A, thus obtaining point 2; this gives us points 1 and 2, and A. To obtain the next point B, take distance L-B formed with base line 2-B, and using last obtained point 2 as a centre and draw an arc near point A intersecting it with one drawn from A, having a radius equal to one division of plan of top, as A-B; lay out all the remaining angles working as described form B to 3 on dotted line, B to C on solid line, C to 4 on dotted line, 4 to D on solid line until the line 9-K or one-half the pattern is set off, when a line drawn through the points obtained will give outline of one half pattern, which can be used to mark off balance, or the above can be laid on opposite side of line A-1 as shown as suits one's purpose.

(Continued in next issue.)

NEW HARDWARE GOODS
OFFERED TO CANADIAN HARDWAREMEN

IMPROVEMENTS IN THE EASYON CHAINS

The 1917 Easyon Tire Chains, made by the Leather Tire Goods Co., Niagara Falls, are now being put out and the makers state they show some improvements over the old style. Easyon chains are single chains fastened to the spokes with leather covered fasteners.



Easyon Tire Chain

In the 1917 chains instead of being made of welded links, the cross chains are made of steel more than ⅛ inch thick, rounded and perfectly smooth where it comes next to the tire, but having the thin edges projecting away from the tire so they take a powerful hold in mud, snow or on ice. On the middle of the tire the gripping member is comparatively small and narrow so that it causes no bumping on pavements, but being long and straight the ends stick out taking a deep hold in mud or snow. On each end of the gripping member are chains with short links which fit over the lever fastener to adjust the chains on the tire.

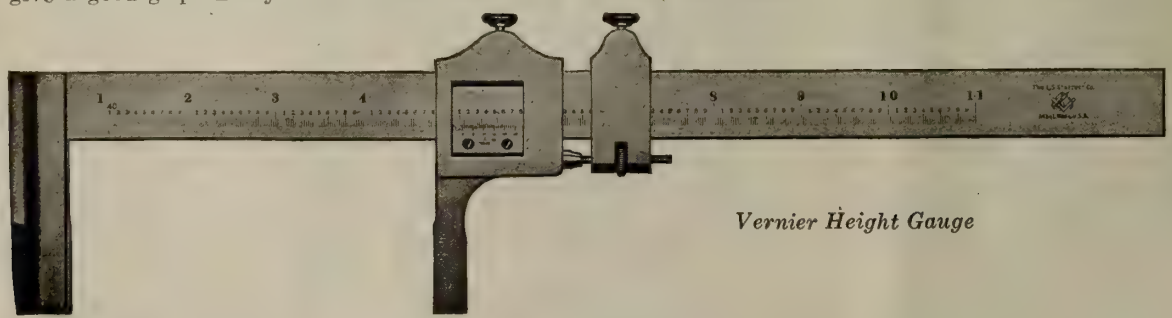
Easyon Chains are packed a set of eight in a bag; four for each rear wheel, enough to give a good grip on any road. Easyon Chains are made in three sizes: Small size which fits tires 3 inch or 3½ inch. The medium size fits tires 4 inch or 4½ inch, and the large size fits tires 5 inch or 5½ inch.

NATHAN BRAKE MATS

Nathan Novelty Mfg. Co., 84-90 Reade street, N.Y., is marketing the Nathan wind and heat brake mat, which, it is claimed, automatically closes the lever slots regardless of the position of the levers, and does not interfere with the running of the car. The makers state that the mats keep out the cold drafts experienced in winter driving and the excessive heat from the engine in summer. The mats are made of extra heavy padded felt covered with fine quality artificial leather, strongly stitched. The mats are furnished with necessary tacks for fastening the mats in position. There are two pieces to the set as illustrated.

Nathan Brake Mats

NEW VERNIER HEIGHT GAUGE



A new vernier height gauge having, it is claimed, improved attachments for greater efficiency has been brought out by The L. S. Starrett Company of Athol, Mass.

The bar is 10 in. long graduated to read by means of the vernier to .001 of an inch on measurements up to 8 in. high. The base is 2¾ inches long by one inch wide, hardened to give long wear and recessed in the bottom and ground square with the bar, giving perfect accuracy.

An extension is furnished for the movable bar which allows reverse measurements to be taken from the bottom or top side of the jaw.

An attachment to permit measurements inside the franc of a jig or to measure the depth of recesses is also furnished with the gauge, and permits a wider range of work.

Including the attachment, the price of the gage is $33.00.

Vernier Height Gauge

A SPECIAL DONATION

Montreal, Que.—A special series of donations was made this Christmas by the Hardware and Metal Association of the Board of Trade, in lieu of the annual banquet which they were in the habit of holding before the war changed their customs. During the past two years the association gave a Christmas dinner to children of soldiers and others who were deserving, but it was found that such was the prosperity and general habit of giving that it was difficult to get enough children to eat the dinners. Last year in particular preparations were made for many more children than attended. It was, therefore, decided this year to devote the money to help various charitable and patriotic works. The members subscribed $5 apiece, and on Saturday the president, Alex. Gibb, sent $100 to the Khaki League, $20 to the Soldiers' Wives' League, and $5 to the Children's Memorial Hospital.

At the recent meeting of the Canadian Wholesale Hardware Association in Toronto, a resolution expressing the satisfaction of the members at the recovery of Mr. William Starke, of Starke, Seybold & Co., Montreal, from his recent serious operation, was placed unanimously on record.

SISAL AND MANILA ROPE MAY ADVANCE

(Continued from page 19.)

State are derived almost entirely from taxes imposed upon the production of sisal hemp. This industry may be justly said to be the very life-blood of the state and of its people. The direct intervention of the state, resulting in the creation of the Commission Reguladora, is but a manifestation of the importance of this industry to the life of the state and to the welfare of its inhabitants.

"The sisal industry had its beginning in Yucatan some fifty years ago, and gradually grew to its present proportions. Its greatest development occurred in the period between 1898 and 1907. During that period there had been an increased demand for sisal and an expansion of the purposes for which it was used. Quite a number of exporters of importance were engaged in the business of buying and exporting the product. Competition was keen between them. Prices rose as high as 10c in New York in 1902, and from 1901 to 1906, inclusive, averaged about 7.67c per pound. Following the panic of 1907 the financial and economic situation in Yucatan changed very much for the worse. . . . This depression continued until the summer of 1912. During this period sisal sold as low as 3c per pound in Merida. In October, 1915, the Government undertook to assist the planters in the proper marketing of their product; undertook to establish an agency with such financial credit as to inspire confidence, not only in the planters, but in all others dealing with it, in its ability to carry out its contracts; undertook to establish a channel whereby the planters could deal directly with the consumer."

Many Kinds of Hemp

The hemp plant proper or "common hemp," is in its Latin designation Cannabis Sativa, an annual shrub. The term hemp, however, is used to designate many other kinds of fibre which are in no way related to the species of common hemp. Among these fibres so designated are the Manila hemp, which comes from a plantation; sisal hemp from an agave; bow string hemp from a liliaceous plant. The different kinds of "common hemp" are designated with such prefixes as Breton hemp, Piedmontese, Russian, English, China and Japanese hemps. The hemp plant proper is a native of that part of Asia which includes India and Persia, though like flax, its culture has been extended to many portions of the world in both temperate and tropical climes. It was used by the Scythians 2,500 years ago, and it was probably known to the Chinese and Europeans many centuries earlier. The Romans used it for sails and cordage, but not until after the dawn of the Christian era. It grows wild in many parts of India, where it is regarded more for its product known as chang or hasheesh than for its fibre. It flourished on both the east and west coasts of Africa, and has been naturalized in Australia. In Europe before the war it was cultivated chiefly in France, Italy, Germany and central and southern Russia. The fibre is produced in the bark of the straight stiff stalks or stems. This is the kind of fibre that was formerly used in African hemp rope. This particular kind of rope is not the biggest factor in the cordage market on the North American continent. Manila fibre, sisal and New Zealand hemps are now more generally used.

Manila Hemp From Banana Family.

The Latin name for the manila hemp is Musa textilis. It is also called "abaca." This species belongs to the plantain or banana family, the commercial fibre being derived from the stalk or trunk of the wild plantain, and is classed as a structural fibre. The extraction of the fibre is a simple operation. The abaca is cut near the roots when the plant is two to four years old, and just before blossoming. If cut earlier the fibre is finer but shorter. After striking off the leaves the trunk or stem is slit from end to end, and the sheathing layers of cellular matter are dried for a day or two and then cut into strips three inches wide, and finally scraped until the fibre has been cleaned of all extraneous matters and soft cellular tissues. The bundles of wet fibre are shaken into filaments, washed, dried and sorted. The export fibre is wrought into hanks and made into bales of about 270 pounds, when it is ready for shipment. The commercial fibre of this plant is produced only in the Philippines, although its culture has been attempted without success in the West Indies and Florida.

Sisal Plant Looks Like Century Plant.

The classic name for the sisal plant is the Agave Rigida. The growing plant somewhat resembles the century plant, though the leaves are more slender and spear-like. They measure 3½ feet to 5 feet long and 4 to 5 inches wide, the general average being 4 to 4½ inches. The product is a structural fibre derived from the other leaves, the first cuttings for fibre being made when the plants are five years old from the date of setting out in the field. The filament is yellowish white in color, straight, smooth and clean. It is a native of Yucatan, which furnishes the bulk of the world's supply. The Bahamas and recently Hawaii have contributed a little. It is found in many parts of Mexico proper, throughout the West Indies and in Central and South America.

The commercial supply of the North American continent is mainly derived from Yucatan. The Yucatan industry is centred at Merida, 20 miles south of Progreso, the port of shipment. On the larger farms systems of miniature railways are laid down for the transportation of the bundles of cut leaves from the fields to the central factories, where the cleaning or scraping process is effected by powerful machines. The operation consists merely of removing the epidermis and soft cellular tissue, which leaves the fibre clean and white. It is then dried in the sun and baled for market. Sisal hemp and manila hemp make up the bulk of the hard fibre used for cordage in the United States and Canada. Latterly, New Zealand hemp is coming more into the market as a rope fibre. The greater portion of the sisal goes into binder twine, however.

New Zealand Flax for Rope.

The New Zealand hemp carries the formidable Latin name of Phormium Tenax. It is a structural fibre derived from the leaves of a liliaceous plant, resembling the flag, which is native to New Zealand, but is found in other portions of Australia. It has been distributed to the Azores, St. Helena, Algiers, Southern France and the British Isles. It thrives in California, where its leaves are used as tie material. Its many varieties produced in New Zealand yield fibre capable of manufacture into cloth of the texture of linen, satchels, table mats, sandals, sacks, rugs, and mattings, threads and twines of superior strength, together with cordage and cables.

Sisal Takes Big Jump Upward.

During the past week quotations have again been made by the Regulating Commission which are 3½c per pound higher than recent quotations. The sisal fibre is now quoted at 13½c per pound, as compared with 10⅜c at the time of the last sales. This puts great firmness in the sisal rope and manila rope products. An advance is looked for in these products almost any time and may probably take place before this article is printed.

1760. **Brushware.**—An East London firm of hardware merchants asks for catalogues, price lists and samples of Canadian-made brushware.

WEEKLY PAINT DEPARTMENT

High Costs Good Reason for Painting

THE *Paint, Oil and Drug Review*, of Chicago, points out that there is an angle to the paint industry which should be emphasized during the approaching season, and every available agency used in making the public recognize the actual facts. Some have said that the high cost of paints would curtail consumption. It is against such a fallacy that attention is directed.

The cost of building or repairs is now at the highest level. A very large percentage of homes badly need repainting. As paint is cheaper than building material and labor, it should be used freely to avoid further decay. To replace this is simply expense added which the paint required for protection would prevent.

With the high cost for building materials, why not educate the consumer to use house paints freely so as to save the expense of repairs. This is an old story, but its application to-day will stimulate business.

The old adage, "A stitch in time saves nine," can be applied better now than ever before, because those who believe they are saving money when they delay painting next spring, will only be increasing their ultimate expense; then both repairs and paint will be required, which means double expense.

Paint dealers should also keep in mind that the "utlimate consumer" is now quite used to many heretofore unheard of prices. Bread at seven and eight cents a loaf as well as everything else in the food line on even a higher increase in cost—the penny newspaper in many cities has gone to two cents—the nickel "movie" is now ten cents and the ten cent one fifteen cents. In common with everything else paint has advanced, probably the last important commodity to do so. The consumer hardly needs educating these times. What is wanted most is nerve on the part of jobbers and dealers to push the sale of all paint products regardless of cost. Get a right percentage of profit and get the business.

The most important thing for a dealer these days is a complete refiguring of costs, overhead, selling expenses and profits. Then arrange new selling prices. There have been so many advances without a complete inventory that a dealer to-day may be losing money. It is fortunate that the usual time is here for the annual stock-taking. It is best to forget the past and start 1917 with a clean slate and if necessary a new selling system. The man who does this will last longer than the other fellow. He may lose some trade at the start, but when the sheriff is running the other fellow's business he will be selling at a profit. Remember if you cannot sell your paints at a profit next year you would better keep them until you can, but be sure you know what you are doing.

WASTE PAPER AS A FINANCIAL ASSET

(Continued from page 29.)

worth considering. To get the advantage of the better rate on car shipments many merchants in smaller places have been combining to make up a car lot. For instance, 11 merchants in Orillia assisted in loading a car, the net return was $250, to be divided proportionately among them. In Sudbury, too, there has been formed an association to handle the supply in this way. This is a plan that might very well be adopted by many other places to the advantage of the merchants.

Shipping Part Cars at Car Lot Rate

But even where it is not possible to make up a straight car load, it is often of advantage to ship a car light, paying for the required 12 tons, which is less than the part car rate. For instance, taking the North Bay figures, for example, a straight car load rate would amount to $28.80, a part car shipment of six tons would cost exactly the same amount, and if bagged paper was included the six ton shipment would cost $36.60. It is evident, therefore, that in a case like this any shipment over a half car could advantageously be billed as a straight car taking advantage of the car rate, and thus enabling the shippers to include bagged paper if necessary, at no extra cost.

Waste Paper a Debit or a Credit?

In looking into the matter of waste paper, it becomes evident that it is something that a merchant cannot afford to overlook. Loose paper is an outstanding menace, not only to the individual merchant, but to the community in which he resides. Methods of destroying paper are wasteful of good material, of time that might be better employed and are also a danger. In other words, this method of handling waste paper must be reckoned as a debit item. There is no way of getting away from the force of this argument, as against this loss there is the possibility of making a very comfortable profit, with a less waste of time, and the practical avoidance of any fire risk. Surely it is a clear enough case to present itself to the careful consideration of every wideawake merchant.

NEWS OF SASKATCHEWAN R.M.A.

Saskatoon branch of the Retail Merchants' Association recently held a window display contest, for the purpose of encouraging the window trimmers of the city to trim better windows. Secretary F. A. Raymond, of the Saskatchewan Provincial Board, in writing to HARDWARE AND METAL, stated that the contest was an unqualified success. Another contest will be held during the spring.

In order to give the smaller stores a fair chance to compete with the department and other larger stores, the stores of the city were divided into three classes as follows:—

Class A.—Department, dry goods, clothing, men's furnishing, hat, shoe and millinery stores. ladies' shops, tailor shops.

Class B.—Drug, stationery, book, music, art, jewelry, china, cigar and confectionery stores, photographers' studios.

Class C.—Hardware, carriage and harness, sporting goods, leather goods, automobile, furniture, wallpaper, paint, grocery and provision stores, bakeries, meat markets, electrical, plumbing and florists' shops.

In Class C the Fawcett Hardware Co. won first prize and the Saskatoon Hardware Co. received Honorable Mention. Suitable prizes were awarded to the winners.

Big Market for Brushes

Will you let us say to you that there is a much larger market in every community than is generally perceived. We make a hundred or more different kinds of brushes. For example, there are **Meakins Brushes** for horse stables and carriage cleaning, for garages and automobile needs, for butchers, barmen, stove-makers; for walls, radiators, floors, bannisters, cornices; for kitchens, parlors, schools; for cream separators, gun barrels, bottles.

We do not suggest that you carry stocks or even a sample of every variety of brush, but we do suggest that you have our catalogue and familiarize yourself with our various brushes in order to be able to suggest the right brush to the right person for the right need.

Sell from our Catalogue—Just a last word: Meakins Brushes are good brushes—and our catalogue will tell you why. Our catalogue is valuable. Have you a copy.

WEEKLY PAINT MARKETS

MONTREAL

MONTREAL, Dec. 27.—Closing days of 1916 find the conditions in the paint trade encouraging. In spite of advanced prices demand is good. There are signs of increasing trade during the opening monthsof 1917. More paint is certainly going to be manufactured to meet orders already placed, and orders have been coming in steadily right up to the end of the year, though travellers have been back in the city. Indications are not towards lower prices, but there is some sign of steadiness for a period at present prices, and the opinions of averagely confident, but not over optimistic business men in the trade circles interested incline mainly towards an outlook that is full of the clean, clear wholesome brightness of new paint, the brightness that bespeaks a better year before the world and this end of it in particular, than even the best little bits of the past year. From many minds like-minded in this at least the viewpoint is gathered.

Mixed Paints Show A Healthy Tendency

MIXED PAINTS.—No change reported from conditions of last week, but a distinctly busy outlook, and no decline in demand owing to increased prices—that is the sum and substance of many interviews on the paint situation with many manufacturers and wholesalers. There is every sign that more paint will be manufactured for the coming year, and that in spite of the many difficulties that beset the industry in the past, better business will be done, and forward strides will be made in the science and development of paint making and paint using in Canada. Conditions as regards colors look steadily more hopeful. Oils are high, but obtainable in sufficient quantities. Orders for mixed paint are increasing in size, and stll coming.

Steadiness is the State of White Lead

WHITE LEAD IN OIL.—No change has been made this week, and no further change is immediately expected in the prices of white lead in oil. The metal has been in rather easier market of late. The oil while still firm, and likely to be firm, is not causing any anxiety to the trade. It appears, in some opinion, as if there were ahead a reasonably brisk demand for white lead in oil which will tend to keep prices more normally steady. Prices in Montreal are as will be remembered: $14.30 per 100 lbs. for the 1 ton quantity, $14.00 per 100 lbs. for orders of five tons at a time, and $14.60 per 100 lbs. for orders of less than one ton at a time.

Linseed Oil Keeps Firm and Steady

LINSEED OIL.—Still well over the dollar figure from the crushers linseed oil was this week unchanged in price to the retail trade in Montreal, but a trifle firmer in tone. There had been no news of any encouraging nature as regards improved quantities of the seed available from the North West, indeed it seems from recent reports as if the farmers have rushed about all their seed to the elevators at the recent high figures. The seed was selling at $2.60 per bushel this week, which is a cent or two higher than the previous week's quotations, and transportation trouble was firming prices. A good demand for the oil was reported by one large crusher. About $1.10 was quoted as crusher's price, and prices to retail trade were as last week's.

Linseed Oil	Raw.	Boiled
1 to 4 barrels ..	$1.12-1.20	$1.15-1.25
5 to 9 barrels ..	1.11-1.19	1.14-1.24
10 to 25 barrels	1.10-1.18	1.13-1.23

Turpentine Firm and in Demand

TURPENTINE. — There was no change in the market conditions as regards turpentine this week. Prices as quoted last week remain very steady, and the market was considered firm and likely to go a little firmer in the coming year. Demand for turpentine has been quite brisk, and is likely to maintain actively so in the opening months of 1917. Prices were as follows:

Turpentine	Per Imp. Gal.
1 barrel lots	80 cents
2 to 4 barrels	70 cents
5 to 10 barrels	78 cents

CALCIMINES TO ADVANCE IN PRICE

In all probability calcimine prices will be advanced in the very near future. Costs of all raw materials have advanced considerably and manufacturers have been absorbing the additional increase. It is now claimed that the limit has been reached and higher prices are inevitable. Whiting and glue have reached high cost levels, and the added cost and difficulty in securing tinting colors have also made the situation more acute. The glue problem is probably the most serious at present and glue, which at one time cost 14c per pound, now costs 35c lb. Even at the high prices now prevailing, glue manufacturers are only able to make shipments in small quantities. The advances will probably range from ½c to ¾c lb.

TORONTO

TORONTO, Dec. 29—The week has been a quiet one in the paint trade. Travelers are in off the road and wholesalers are engaged in stock-taking in preparation for the New Year. There has been a steadiness in most of the lines in which the paint trade is interested. Putty is in a continued firm market, some dealers having withdrawn their quotations for new business altogether in an endeavor to conserve their present stocks as much as possible as an accommodation for their customers. There is a continued firmness in gasoline and all lubricating oils, due to another advance in crude oil. Glass has not yet advanced, but as some dealers put the situation in this commodity, the market in Canada lacks leadership. There are fairly heavy stocks in the hands of some dealers and they are willing, apparently, to dispose of them at present prices. Travelers for some of the large paint concerns who have been booking orders for the spring trade report that business has been good, better in fact than last year. The linseed oil situation remains uncertain, although oil men state it as their belief that there is bound to be a much firmer condition in the face of the shortage of flaxseed.

1917 Paint Leadership

In every town throughout Canada some one merchant will sell more paint in 1917 than will any of his competitors.

It is *easier* for a live, wide-awake merchant to achieve this paint leadership with a

B-H AGENCY

than with any other line of paints.

In the first place, he has a **complete** line, with which he can supply paint products for any conceivable purpose.

He has a line whose **high quality** makes it easy to sell, and insures repeat orders.

He is helped by the great B-H national sales campaign, which carries the story of B-H quality into every hamlet throughout Canada—and which goes **directly** to his customers.

With these advantages he has a big advantage over competitors from the start.

With reasonable aggressiveness himself, he can use this advantage to get the lion's share of the paint business of his territory.

If we haven't an agent in your locality, write *to-day* for the most interesting agency proposition that has yet been offered in the paint business.

BRANDRAM-HENDERSON LIMITED

Montreal Halifax St. John Toronto Winnipeg

If interested, tear out this page and keep with letters to be answered.

Linseed Oil in Slightly Firmer Tone

LINSEED OIL—The market for linseed oil is in slightly firmer tone during the past week. Dealers in certain instances have quoted their prices from ½c to 1c per gallon higher in single barrel lots. There is a firmness in the flaxseed market during the week, the price being quoted up 3½c over the close of the market on Wednesday of last week. Last week at the close of the market on Wednesday the December option in flaxseed at Winnipeg closed at $2.56 and on Wednesday of the present week it closed at $2.59½. There has been a steadiness in the seed market during the week, fluctuations being absent and the trend being slightly higher. Car receipts at Winnipeg are very light at the present time, one day during the week being down as low as two cars. This would seem to indicate that the flaxseed is pretty near all marketed. As to what effect peace would have on the market for linseed oil there is a prevailing opinion among oil men that while there might be a temporary slump in the price of oil, the undertone is one of firmness and that it would only be a question of time until the matter would adjust itself and firm prices again prevail It is pointed out that in the rebuilding great quantities of oil will be required for the painting. Seed from Russia and the Argentine would, of course, find free access to the market, but it is thought the demand would be greater than the available supply. Prices have held firm during the week, locally. Oil cake is quoted from $50 to $54 per ton.

1 to 2 barrels	$1.08-$1.15	$1.10½-$1.18
3 to 5 barrels	1.07- 1.14	1.09½- 1.17
6 to 9 barrels	1.06- 1.13	1.08½- 1.16

Another Advance in Crude Oils Gasoline Firm

GASOLINE—During the week still another advance of 10c per barrel has been made in the price of mid-continent crude oil. This now makes the selling price of that commodity $1.30 per barrel, which represents an advance of 40c per barrel within the past month. In other words, the crude product has advanced 1c per gallon and the refined product has only advanced 1c per gallon. There is a decreasing production of crude oil which accounts for the higher price of that commodity. There is a firmness, consequently, in gasoline, coal oil and all lubricating oils. It is anticipated that advances in all lubricating oils will be announced in the near future. Gasoline is quoted from 27½c to 28c, and benzine 1c under these prices.

Turpentine Holds; Primary Market Down

TURPENTINE.—Locally there has been a steadiness in the turpentine market but in the primary market there has been a depression during the week, attributed by authorities in the turpentine districts in the South to the slackening of trading at this season of the year, and to the uncertainty that prevails with respect to freight shipments. It is pointed out that it is not a question of having to pay higher freight rates, but that it is almost impossible to secure space at all. The British Government is drawing the lines tight on the amount of space that ships can allot to things other than steel and iron and munition. Recently an order has gone out that all ships must reserve 85 per cent. of their space for the needs of the Government. Formerly it was 60 per cent. This curtails the export trade of turpentine. In the primary market turpentine was quoted 1c down during the week and two cents from the recent high point.

	Per Imp. Gal.
1-barrel lots	$0.75-$0.82
2 to 5 barrels	0.74- 0.81
6 to 9 barrels	0.73- 0.80
5-gallon	0.80- 0.89

White Lead Holds in Steady Market

WHITE LEAD.—There is a continued steadiness in white lead in oil and prices are holding at recent quotations of $14.75 per 100 pounds in less than ton lots and $14.45 in ton lots. In the primary market pig iron is a trifle easier during the week, being quoted down from $7.50 to $7.62½ as against quotations last week of $7.62½ to $7.75 per hundred. The demand for white lead is very limited at the present time, especially during the holiday season.

Glass Market Has Not Yet Advanced

GLASS.—Fairly large stocks in dealers' hands and a lack of initiative to mark prices upward in conformity with the primary market is given as the reason for the prices of glass to hold at present levels. Dealers assert that the prices should be higher but it is apparently a case of one waiting for the other to take the lead and as yet none have cared to do this. When present stocks are exhausted new prices as announced by the American mills would compel higher prices, it is pointed out.

Glue Quotations Are Hard to Get

GLUE.—There is a continued scarcity in glue. Wholesalers in some instances have withdrawn their quotations from the market and are conserving their present stocks for their customers. White pigsfoot glue where it can be obtained is quoted up to 38c per pound, which represents an advance of 9c per pound. Bone cake has also been advanced 3c per pound and is now quoted at 25c. French glues are off the market entirely at the present time and supplies of other makes are exceedingly hard to get.

TRADE INQUIRIES

1761. **Hardware.**—An East London firm make demand for supply from Canada of hardware, household and building. Special lines of cheap goods suitable for native trade. Paint Dealers Should Stock "Full Lines"

There is at present a marked shortage of the raw materials from which paint products are made, consequently their cost is rapidly increasing.

There is also a marked shortage of labor, and wages have increased; therefore, the prices of paints and finishes will not be lower but may be considerably higher in the near future.

Don't hesitate to order your full season's supply at once.

Canada Paint Products

offer the best opportunity for quick sales and increased profits.

Live "C P. Full Line" dealers are fast gaining control of the paint and varnish trade in their districts. This is made possible by our thorough education of consumers to demand only " C P." Products.

Our Sales Promotion Plans for 1917 are greater than ever before, and if you want to "cash in" on them ask us for the "C.P. Agency" in your district NOW.

The Canada Paint Company, Limited

572 William Street, Montreal
112 Sutherland Avenue, Winnipeg

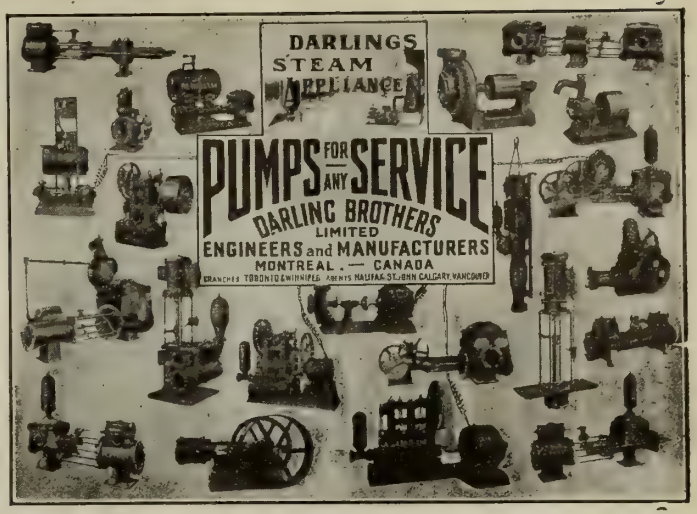
"NORCROSS"

CULTIVATOR HOES AND WEEDERS



Sell for but a little more than the common hoe, and cultivate closer to plants without injuring them than any other kind of implement, leaving the soil level, loose and untrampled.

"NORCROSS" TOOLS ARE OF THE HIGHEST QUALITY AND FINISH, AND THEY PAY A HANDSOME PROFIT.

Drop a card for full particulars.

Stanley Tools

STANLEY NAIL SETS AND CENTER PUNCHES

"STANLEY" Nail Sets and Center Punches are made of a special grade of tool steel. They are hardened on both ends by an improved process, given an oil temper and will be found to "stand up" under the most severe conditions.

Special care has been taken in selecting the proper knurling for the shank, and the user will find that the feeling of security as to "grip" is a particular feature of "STANLEY" Nail Sets and Center Punches.

The neat and handy boxes in which they are packed make them an attractive article for counter display.

Re Gauges and Prices of Sheets.

Prices which follow on black and galvanized sheets are purely nominal. The market has reached a state where prices are quoted only on application and for immediate acceptance.

On account of it being practically impossible to secure galvanized sheets from England, owing to the war, American mills have decided that they will no longer roll the English gauges to meet this competition. However, they will continue to roll at 10¾ oz., which will be known as such or a 30 gauge, and will take the place of the former English 28 gauge.

SHEETS (BLACK)

	Montreal 100 lbs.	Toronto 100 lbs.

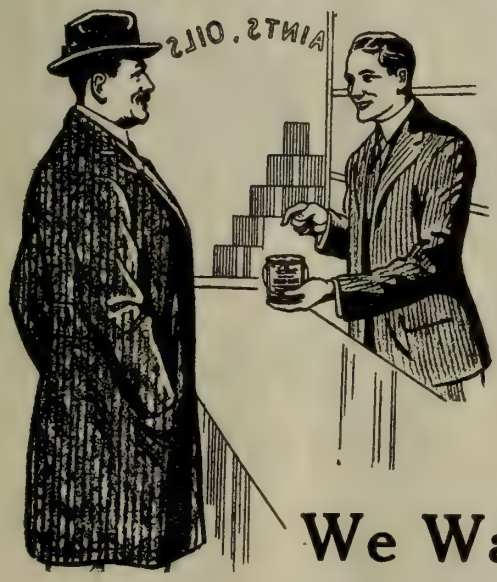
RAMSAY'S DUL-TONE

A Flat, Sanitary and Washable Finish for Interior Decoration

To Increase Winter Sales



This is the Line

Manufactured by

A. RAMSAY & SON CO. - - MONTREAL

TORONTO *Established 1842* VANCOUVER

No Argument

we have ever made talks so loud as the one right in every can of Lowe Brothers' products. That's the talk that makes every customer a pleased customer and brings him back again and again to your store. Hundreds of our dealers say this, only they say it more emphatically than we do.

We Want YOU

to realize that there are new paint possibilities—for bigger business in your town—for better service and co-operation from the manufacturer. This may sound big, but we mean every word and can prove it. Just write us for our proposition and see.

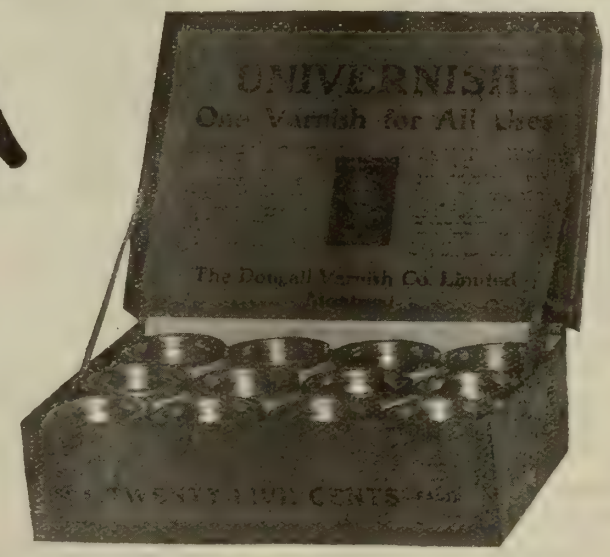
Put One In a Prominent Place—



UNIVERNISH

is the last word in varnishes — it is good for every purpose where a varnish is required.

It's good for floors, pianos, doors, woodwork, table tops, boats, automobiles—it will give splendid results anywhere and everywhere.

You can safely recommend it and we will stand behind you—order a stock to-day and give it prominence. It's a good seller and will pay you well.

Put up in handsome boxes containing twelve quarter pints, to retail at 25c each, also in all regular larger sizes.

Great West Electric Co., Limited

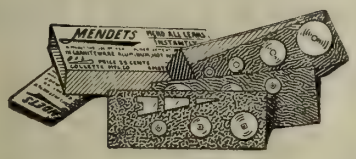
A Straight Talk from the Manager

No. 54

And Now for 1917!

From all appearances, it will be a year in which eternal vigilance will be the price of the retailer's safety.

To run a hardware business by guesswork or instinct will be dangerous in the extreme. You will have to base your calculations on solid facts.



HARDWARE AND METAL is better equipped than ever to be your adviser in 1917. Read each one of the fifty-two copies you will receive, for you will find information of the most valuable kind in advertising and news pages alike.

J.G.L.

THEY STOP LEAKS IN METAL VESSELS

MENDETS
A PATENT PATCH

You know of **Mendets**, but are you selling them? They really sell themselves, if you put them in plain sight. Every family should have them, and repeat sales make the line profitable.

Wholesale Hardware Merchants Who Sell MENDETS:

Whites, Ltd., Collingwood, Ont.; Wood, Vallance, Ltd., Winnipeg, Man.; Wood, Vallance & Co., Hamilton, Ont.; Hobbs Hardware Co., Ltd., London, Ont.; D. H. Howden & Co., Ltd., London, Ont.; Thos. Birkett & Son Co., Ltd., Ottawa, Ont.; Miller-Morse Hardware Co., Winnipeg, Man.; Marshall Wells Alberta Co., Ltd., Edmonton, Alta.; Walter Woods & Co., Winnipeg, Man.; Rogers Hardware Co., Ltd., Charlottetown, P.E.I.; Thompson & Sutherland, Ltd., North Sydney, N.S.; Merrick, Anderson Co., Ltd., Winnipeg, Man.; A. M. Bell & Co., Halifax, N.S.; J. H. Ashdown Hardware Co., Ltd., Winnipeg, Man.; Bond Hardware Co., Guelph, Ont.; Emmerson & Fisher, Ltd., St. John, N.B.; R. Chestnut & Sons, Fredericton, N.B.; Lyons & Marks, Toronto, Ont.; L. H. Hebert & Co., Montreal, Quebec.

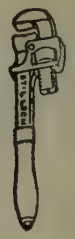
EVERYTHING WE SELL WE GUARANTEE

SWIFT CURRENT, SASK. Sept.20,1916.

Messrs,
Hardware and Metal,
143-153 University Ave.,
Toronto,Ont.

Gentlemen:-



We beg to acknowledge receipt of your favor of the 16th., also cuts as mentioned therein and for which we thank you.

We are now using about fifty of these with good results.

Yours truly,

THE W.W.COOPER COMPANY Limited.

P/H. per. P.

Since we announced HARDWARE AND METAL'S Electro Service about a year ago, nearly 200 subscribers have availed themselves of the opportunity to secure cuts for their local advertising at low cost.

The letter from The W. W. Cooper Company, reproduced above, is only one of many which we have received from merchants who have had good results from using these cuts.

You can have equally good results from a judicious selection of electros combined with good "copy." Write now for free proof sheets showing our complete assortment of hardware electros. They cost only 20 cents each, and they will open up big possibilities for expanding your sales.

HARDWARE AND METAL

The White Mop Wringers

Because of their wonderfully quick turnover the White Mop Wringers are one of the most profitable commodities any dealer can sell. Their ease of operation and general desirability make a quick and strong appeal to the consumer.

They are virtually self-sellers. They are made of hard Maple or Birch wood and the best malleable iron. They fit on any pail and wring the Mop perfectly.

They are often used as Fruit and Vegetable presses with good results.

White Mop Wringer Company
Fultonville, N.Y.

ADAMSON VULCANIZERS

Warning to the Trade:

It is very important to place your orders for Adamson's Products with your JOBBER at once, to assure you of prompt delivery.

The unprecedented demand for Adamson's compels us to make this urgent request.

ADAMSON MANUFACTURING CO.
HAMILTON, CANADA

Sanitary Plumbing

does not stay sanitary without proper care.

Water-closet bowls can easily be kept absolutely clean by using

Sani-Flush

Tell your customers to shake a small amount of ***Sani-Flush*** into the bowl twice a week and swab out with a small mop. This will keep the bowl clean and sanitary.

Sani-Flush will pay you a good profit and is safer than acids for your repair men to use in cleaning up old bowls.

Write for prices and other information.

Perhaps You Are a Careful and Close Buyer

IT may be an ingrained caution. It may be that you have been "bitten" once or twice, and so are "shy." It may be that it is a developed habit—a measure and method of self-protection. But no matter why you may be a hard man to sell to, is not this true:

> That many things bought by you, and now greatly esteemed, were stoutly resisted by you when the salesman brought them to your attention for the first time?

For example, a cash-carrier system, cash-recording system, typewriter, computing scale, plate glass windows, prism lighting, show-cases, loose-leaf systems—and almost everything else in common use nowadays by merchants, are resisted when they are first presented. But later, when they are bought, and when they have been given time to demonstrate their value, why, you could not induce the merchant to do without them.

All this leads up to this point:

> Suppose we urge you to read THE FINANCIAL POST each week—to subscribe for it for a year at a cost of $3.00 (52 issues), there is just a chance that you would resist the suggestion—not so much because of the $3.00, but because "you don't see it."

Now the regular reading of THE POST will make you see your own and the Nation's Business in a bigger way, and by adding to your power to see things pertaining to Money and Business in a clearer, larger way, you will be a stronger man for the business in which you are engaged now. If you can grow to a stronger business man at a cost in money of $3.00 a year, the chances are that you will not hesitate to pay the $3.00.

Nothing that you can read outside the trade paper serving your field of business is so much worth while as the reading of a first-class business paper. The Business Outlook will help you in your business:

> Will tell you when to get ready for poor business conditions, when to watch your collections with unusual care, when to buy sparingly, and when to prepare for big business. It will also help you with your banker. Will probably save you money in exchange on your cheques and drafts, because you understand the movements of money.

At any rate, we ask you to take the first necessary step in the direction of the larger business world which lies about you and close up to you and which is vitally connected with your affairs. We ask you to sign and return the form below, confident that you will be glad afterwards.

A good saw should have strength, elasticity, toughness and endurance. You get these qualities in full degree in Arrow Head Saws, made from Vanadium Steel. The steel of ultimate quality.

ARROW HEAD SAWS

The Arrow Head Saw will do 20% more work. This has been proven. These saws therefore are good for you to supply your customers. They are profitable to you, and they enhance your reputation for supplying a good article. Protect yourself by ordering now. Your jobber has the goods.

R. H. SMITH CO., LIMITED, St. Catharines, Ontario

FORGETTING

One of the things we all do well is to **forget.** **Names** that were household worlds yesterday are gone to-day. Because people knew your Name and your Line a year ago it is no sign they do to-day. They forget easily.

Keep yourself in the public mind by advertising. It is just as important to make old friends remember as it is to win new friends. Advertising does both.

If interested, tear out this page and keep with letters to be answered.

An Appeal to Men of High Calibre

HAVE you thought of this?—that any advance in a Nation's Commerce, or Civilization or Spirit is due solely to advances in these directions by many *individuals;* or to put it more definitely, by the *Common people.* The spirit or impulses of *leaders* must pass downward—to the *Common people.*

This truth is of importance to us in Canada. We make progress in this or that direction only as the *multitude* is bent in this or that direction.

YOU—perhaps your name is John Brown—must deliberately seek to advance yourself in the direction of ideals. Then you will fire another to do likewise, and he in turn will start another going forward; and so on and so on, until a mass is energized and is moving ahead towards higher achievements.

This means that a heavy burden of obligation rests on every single one of us, if Canada is to advance in high and good ways.

HERE is a practical application—you, as a business man, must consciously and deliberately seek to be a bigger business man, if you would see our good country as a whole advance.

As a business man engaged in the manufacture or distribution of merchandise, you must be well informed with a vision of Canada's business world wider than the bounds of the business which provides you a livelihood; and a fuller knowledge of what is being done, thought or said in the larger business world that incorporates your own.

This wider vision and fuller knowledge can be procured from a reading each week of The Financial Post. (Price $3.00 for 52 issues).

No other single paper perhaps will serve you so soundly and broadly.

How: By guiding you in your investments. It is often harder to invest money wisely than it was to earn it. The successful purchase of securities requires long study of investment matters.

Then when you have about made up your mind what to buy, The Post's Investors' Information Bureau will give you a careful analysis of these securities and its opinion respecting them.

We put it to you that if you admit the truth and force of what we have said above, the logical thing is to subscribe to The POST. In this way you take a necessary step in the direction of larger progress.

This is a high appeal to minds and men of high calibre—men who have the will and courage to follow the biddings of their convictions.

Therefore, we expect many to sign and return the form below:

ICE TOOLS

Every Farmer, Butcher and Dairyman cuts ice. We have a tool for every use. Write for particulars and prices.

We also have a full line of Snow Plows, etc., for municipal work

ROBERT DONALDSON & SONS, Montreal

THE PROGRESSIVE MANUFACTURING CO.
Torrington, Conn., U.S.A.

FORSTNER BITS

bore their way right through tough, hard, knotty, cross-grained wood and leave a smooth hole and clean surface. That's performance. THEY DIFFER FROM ALL OTHER BITS, BEING GUIDED BY THE RIM INSTEAD OF THE CENTRE. That's scientific construction. They bore any arc of a circle and can be guided in any direction. That's adaptability.
Made for Brace—made for machine. Packed singly—packed in sets. That's convenience. And they sell to Wood Workers, Carpenters, Cabinet Makers and others. That's why you should sell them. Order through your jobber to-day.

Auger Bits, Bolts and Nuts, Bolster Springs, Chain, Drills, Files, Handles, Horseshoes.

TRADE CHICAGO MARK

SPRING HINGES

A SUGGESTION

Have you a stock of Spring Hinges that have distinctive selling features which your salesman can offer and which would make the prospective purchaser buy them and no other?

Chicago "Triplex" Spring Butts

offer this advantage to you. The appearance, durability and finish of this article are unsurpassed, and in consideration of prices that are conservative in respect to value, the up-to-date dealer cannot afford to neglect this profitable business.

Send for Catalogue M 32. It fully illustrates and describes the most complete line of Spring Hinges manufactured.

Chicago Spring Butt Company.

CHICAGO TRADE CSB CO MARK **NEW YORK**

WANTED, AT ONCE — CAPABLE HARDware man to manage retail hardware business in thriving Ontario town. State experience, salary expected, and give references. Apply Box 182, Hardware and Metal.

Men who are capable of managing a retail hardware business are not easy to find. The position requires a high type of ability. Above all, it requires a man who recognizes opportunities and who knows how to make the most of them. That type of man in the hardware business is almost invariably a reader of HARDWARE AND METAL. There were fifteen replies to the advertisement shown here. It was a point in favor of all the applicants that they were in the habit of reading HARDWARE AND METAL.

PERTH, ONT.

When writing advertiser kindly mention that you saw his ad. in this paper.

You Sell Something to Somebody

AND to that somebody you must make known — by advertising — what you sell, why it is good, and so on. Also, you must have a medium—a publication read by your customers or should-be customers.

All this you consent to without demur. What may perplex you a little is the **Medium** to employ.

This should not be a puzzle if your product or commodity is one purchased by the general public, and if your constituency of buyers is found everywhere in Canada.

The one medium of quality and of national circulation is

MACLEAN'S MAGAZINE

You can find no substitute for it at a lower cost, and none that will carry your proposals or announcement with greater acceptability.

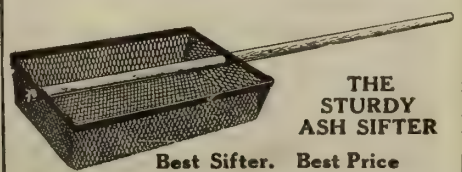
The conclusion is plain.

N.B.—Objectionable advertising not accepted. Both editorial and advertising columns are closely censored to keep them clean and decent.

Published by

The MacLean Publishing Co., Limited, 143-153 University Ave., Toronto

THE AWL YOU WANT



See That Reel

Is the genuine MYERS $1.00 "Lock Stitch" Sewing Awl with the exclusive feature. See thread reel in front of handle under the finger tips. Natural tension. Sews heavy or light material, diamond point, full grooved needles used to protect the thread when sewing.

If we boast we back up our boasting

We make very strong and positive claims about Delta File. We make you very generous offers.

We say:

Delta Files

Will outwear and outwork any other file made (cut faster and retain their cutting edge longer).

That they are the only files of from 3 to 24 inches made absolutely of crucible steel.

That we will refund money paid if our claims are not substantiated by honest test.

We say:

That we will work with you to the limit to have

DELTA FILES

Authorized in every factory in your territory in which files are used; and if we together can get Delta Files Specified after trial, it means nice permanent business for you.

There is a Delta File for every purpose.

Write us, re the Agency for your territory.

Condensed or "Want" Advertisements

There is always someone, somewhere, who is looking for just such a proposition as you have to offer—and it is more than likely that he is a hardwareman and a subscriber to HARDWARE AND METAL. Let an advertisement on this page bring you together.

RATES (payable in advance): 2 cents per word first insertion, 1c per word subsequent insertion. An additional charge of 5 cents for each insertion is made when Box Number is required. Each figure counts as one word.

AGENCIES WANTED

WANTED—LINES TO SELL ON COMMISsion to the hardware and general stores in Southern Alberta. I have been calling on this trade monthly for four years, and have a good connection. Good references furnished. Box 412, Hardware and Metal.

BUSINESS CHANCES

LET JOHN NEW, 154 BAY STREET, TOronto, sell your business. (4)

HARDWARE STOCK AND FIXTURES FOR sale in a Western Ontario city. Stock is clean and well assorted, and will be sold at a rate on the dollar for a quick sale. Box 416, Hardware and Metal.

SHOW CARD WRITERS

SHOW CARD WRITERS EARN BIG money; no special talent needed; we can teach you in few months by our special system right at your home; our students earn money after second lesson; after six lessons one of our students took $17 worth of orders in one day; get particulars special December offer. Dept. H, Shaw Correspondence School, 393 Yonge St., Toronto.

SALESMEN WANTED

WANTED — AN ALERT TRAVELLING salesman to cover Eastern Ontario, Quebec and the Maritime Provinces, calling on the Hardware and Furniture trade. Must be capable of speaking French. State age, experience and salary expected. Box 413.

WANTED — CAPABLE BOILER AND radiator salesman; permanent situation with excellent opportunity for advancement. Apply by letter, stating experience and salary earned in last position. The Gurney Foundry Co., Ltd., Toronto.

WANTED—A TRAVELLER CALLING ON hardware trade, to handle a good line of stoves and ranges on commission, for Ontario. Apply to Box 417, Hardware and Metal.

MISCELLANEOUS

SAVE MONEY ON YOUR GLASS SCRAP. We need pieces 4 x 6, at reasonable prices. For particulars apply to Courchesne & Chaput, Joliette, Quebec.

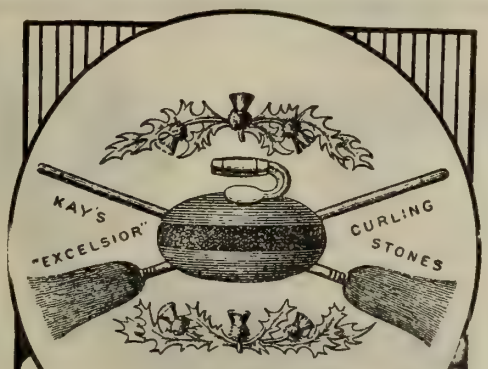
GOOD STENOGRAPHERS ARE WHAT every employer wants. The place to get good stenographers is at the Remington Employment Department. No charge for the service. Remington Typewriter Co., Ltd., 144 Bay St., Toronto.

ADDING TYPEWRITERS WRITE, ADD OR subtract in one operation. Elliott Fisher, Limited, Room 314, Stair Building, Toronto.

WAREHOUSE AND FACTORY HEATING systems. Taylor-Forbes Company, Ltd. Supplied by the trade throughout Canada. (tf)

DOUBLE YOUR FLOOR SPACE — BY INstalling an Otis-Fenson hand-power elevator you can use upper floors as stock room or extra selling space, and increase space on ground floor. Costs only $70. Write for catalogue "B." Otis-Fenson Elevator Co., Toronto.

MR. HARDWARE DEALER—YOU CANnot recommend any ash sifter with the talking points that the Burrowes Patent Dust-Proof Rocker Ash Sifter has. What other sifter has a closed scuttle, double rims, easy rocker motion, etc.? You ought to sell this sifter because of its merit. The Burrowes Mfg. Co., 607 King St. W., Toronto. (50)



SITUATIONS WANTED

HARDWARE CLERK, 20 YEARS' EXperience in retail hardware, desires position as traveller. Best of references. Box 415, Hardware and Metal, Toronto.

WANTED

WANTED — CHICAGO STEEL BRAKE, eight-foot, second-hand, also second-hand Brown-Boggs circular shears, 2¼ to 19". A. Spratt & Sons, Inglewood, Ont. (26)

WANTED, IMMEDIATELY, FIRST-CLASS, all-round plumber and tinsmith. Married man preferred. Steady work and best wages for right man. Apply to McKinley Hardware Co., Parry Sound.

Run perfectly from the very start. No working down with emery necessary.

We carry a full line, in assorted weights, 36 to 45 lbs. to the stone, exclusive of the handle.

Also Handles, Grips, Fancy Washers, Brooms, Boxes.

Also Builders' Supplies.

Walter Belyea

Successor to the late

THOMAS BLACK

WINNIPEG

United States Manufacturers

Have your goods made for you in Canada until your trade here is large enough to warrant your putting up your own plant. An old established manufacturer, now busy on munitions work, with one of the largest and most up-to-date machines and metal-working plants in Canada, would like to undertake the manufacture of hardware, machinery or other metal specialty for the Canadian, British Empire and Allied markets with which preferential trade arrangements are now being planned. Address in the first instance:

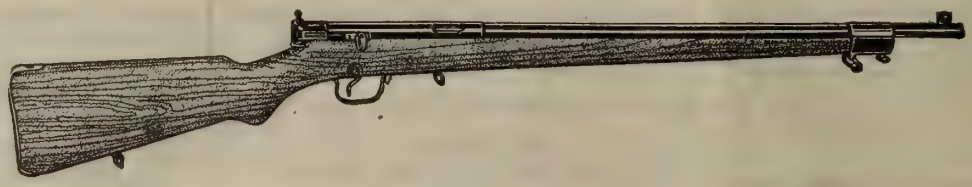
MANUFACTURER

c/o

HARDWARE AND METAL

TORONTO

Want Ads.



If you want a buyer for your business, or have a situation to fill or want a situation, send us a Condensed Advertisement. There is someone who is looking for a proposition such as yours. For two cents a word you can speak across the continent with a condensed advertisement in this paper.

Try it out.

No Time Like the Present for a Display of Ross Rifles

A window display of Ross Rifles will attract customers to your store, and bring in the people with money to spend.

You may be sure that the man who buys a Ross Rifle from your competitor will probably become a steady customer. Remember this when you are arranging your window display to catch the Christmas trade. Ross Rifles make an ideal gift to any man.

If you need any information, write to-day.

Ross Rifle Company - Quebec

ATKINS SAWS and Trowels

A PERFECT SAW for Every Purpose

The entire line made of **Sterling Steel.** Best possible combination of Quality, Material, Satisfaction and Profit. Covered by our **Money-Back** Guarantee.

Order from your Jobber — or direct from Branch or Factory

Write immediately for complete book on Sterling Steel Saws. (Mention Catalog H.M.)

E. C. ATKINS & CO., **STERLING SAWS MADE IN CANADA**

Factory—Hamilton, Ont.; Vancouver Branch: 109 Powell St.

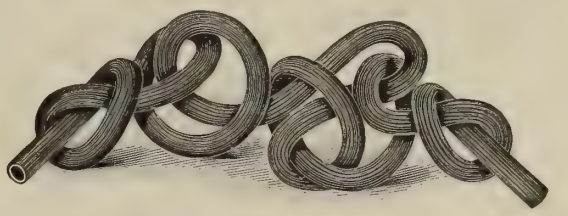
If interested, tear out this page and keep with letters to be answered.

Users Come Back For More

Profits do not always lie in the first sale. The time and trouble to make the first sale often wipes out the profit. Profits are in the repeat orders, in the loyalty of your customers. If you are selling

"HOYT'S FROST KING" BABBITT METAL

you know exactly what we mean. It may take a little talking to sell it to the man who has not used it, but afterwards —well, that first sale made you a permanent customer who is "sold" permanently. Much profit in such a line.



$5,000,000 Sales Annually. Your jobber can supply you. If he will not, write us.

HOYT METAL COMPANY
